

WASHING MACHINE

ABSTRACT

5 A washing machine includes: a housing; a water tub supported inside
the housing; a drum rotatably provided in the water tub; tank (117) configured
to store a liquid agent; tank containing case (114) containing tank (117);
automatic liquid-agent feeding device (109) configured to automatically feed
the liquid agent stored in tank (117) into the drum. Automatic liquid-agent
10 feeding device (109) includes pump unit (111) configured to suck and discharge
the liquid agent stored in tank (117), and the liquid agent discharged from
pump unit (111) falls freely into the water tub. This provides the washing
machine capable of suppressing a liquid agent discharged from automatic
liquid-agent feeding device (109) from remaining in and fixing to a supply
15 channel for the liquid agent.
