

PROTECTIVE COMPONENT FORMING APPARATUS

ABSTRACT OF THE DISCLOSURE

A protective component forming apparatus includes a chuck table, a resin supply unit having a pump and a pipe that supply a liquid resin from a tank to a resin sheet held by the chuck table, a pressing unit that presses a workpiece against the liquid resin supplied to the resin sheet held by the chuck table, a curing unit that irradiates the liquid resin pressed by the pressing unit with ultraviolet and cures the liquid resin, a resin inspecting part that senses the viscosity of the liquid resin, and an informing unit.
