

Abstract

The booklet (1) has a plurality of sheets (31) between the cover (23), and each sheet has a front side and a reverse side. At least one data page (2, 24-27, 37) is provided, which is firmly connected to the cover (23). The data page (2, 24-27, 37) has a flexible layer (3-7, 38) and this flexible layer (3-7, 38) protrudes with one region (3b, 4b, 5b, 6b, 7b) from a data carrier (9, 11, 13, 14, 18, 41). In this region (3b, 4b, 5b, 6b, 7b), the data page (2, 24-27, 37) is connected to the cover (23) and the other sheets (31). The flexible layer (3-7) is connected flatly to at least one further layer (9, 11a, 13, 14a, 18, 41), for example by means of welding or adhesive bonding, and is therefore bound in non-detachably without any mechanical connecting part.
