

Abstract

GAME SYSTEM

5 The game system of the present invention comprises a game
table (2) having a betting area (6) in which a plurality of
betting targets are laid out, a camera (10) that captures the
game table (2) and generates a captured image, and an information
processing device (12) that identifies which betting target (7)
10 the stack (80) is bet on, wherein when a plurality of stacks
(80) of the gaming chips (8) are bet on the same betting area
(6), the information processing device (12), based on the
captured image (11), determines which stack (80) is the stack
of main player (3m) and which stack (80) is the stack (80) of
15 back-betting player (3b).
