

ABSTRACT

The present invention provides a propylene-based polymer composition that is useful in production of a biaxially stretched film that has excellent dimensional stability at high temperatures. The propylene-based polymer composition comprises two or more types of propylene-based polymer and satisfies requirements (1) and (2) below. (1) The amount of components having a molecular weight of not more than 100,000, as measured by gel permeation chromatography, is 30-50 mass%. (2) The amount of components having a molecular weight of 100,000-800,000, as measured by gel permeation chromatography, is 35-52 mass%.
