(54) Title: SIMULTANEOUSLY SPAWNING MULTIPLE SEARCHES ACROSS MULTIPLE PROVIDERS

(57) Abstract: Various embodiments provide the ability to simultaneously spawn a search across multiple different data providers. In at least some embodiments, the simultaneous spawning of the searches takes place in the context of a tabbed browsing environment. There, individual tabs of a browser are each associated with a different data provider and the user has the ability to simultaneously spawn their search across multiple data providers and access their search results using the tabs. Hence, the user can access search results across multiple different providers within the same browser window.
