(54) Title: INTELLIGENT NETWORK AND PACKET DATA NETWORK INTEROPERABILITY

(57) Abstract

A method and system are disclosed for creating an interface (23) between a packet-switched network (16) and an IN, which is based on an interface between an associated circuit-switched network and an IN/CAMEL service (120). Meanwhile, the CAMEL application can also provide IN services to mobile subscribers (12) while they are roaming in other networks (e.g., international roaming).
