

METHOD, INFORMATION TERMINAL, PROGRAM STORAGE MEDIUM, AND METHOD OF PROVIDING INFORMATION

ABSTRACT OF THE DISCLOSURE

A method includes transmitting identification information stored in an information terminal to a first server and acquiring biological information of a user based on the identification information from the first server, generating information indicating a degree of dietary restriction depending on a progress of a disease of the user based on the biological information of the user, generating a personalized menu for the user based on the menu information and the information indicating the degree of dietary restriction so as to meet the information indicating the degree of dietary restriction, displaying the personalized menu on a second operation screen for accepting an order of a dish in the restaurant, the second operation screen being displayed on a display of the information terminal of the user, transmitting ordered-dish information representing the dish selected from the personalized menu and a seat ID to the second server.
