

Abstract

The present invention provides a liquid crystal-aligning agent comprising, as the resin component, a polyimide precursor containing a chemical structure represented by the following formula (1):

The present invention further provides a liquid crystal-aligning agent comprising, as the essential components, the above polyimide precursor and a polyimide precursor represented by the following general formula (2):

(wherein Y is a tetravalent aliphatic group, Z is a bivalent aromatic group, and R is H or an alkyl group).
