Storage Bag**Abstract**

A bag is provided with an aperture for filling the bag. The bag has an
5 inner layer with both portions of permeable and impermeable material. The bag
also has an outer layer having a portion of impermeable material arranged in
relation to the permeable portion of the inner layer so that passage of air is
allowed between inside the inner layer and atmosphere when the bag is being
filled and passage of air between inside the inner layer and atmosphere is
10 inhibited when the bag is filled or partially filled or in a stored state.
