Anti-IL-17A/IL-17F Cross-Reactive Antibodies and Methods of Use Thereof

Abstract

This invention provides fully human monoclonal antibodies that recognize IL-17F, the IL-17F homodimer, IL-17A, the IL-17A homodimer, and/or the heterodimeric IL-17A/IL-17F protein complex. The invention further provides methods of using such monoclonal antibodies as a therapeutic, diagnostic, and prophylactic.
