

BRUSHLESS DC MOTOR

ABSTRACT

5 A brushless DC motor (2A) includes a shaft (6), a first stator (11a), a
second stator (11b), a first rotor (12a), a second rotor (12b), and a coupling unit
(13). The first stator (11a) includes a circuit board (18a), a first stator core,
and a first driving coil. The second stator (11b) includes a second stator core
and a second driving coil. The first driving coil is connected to the second
10 driving coil via a motor lead wire (29) passing through a gap in the first stator
core.
