

SYSTEM DEVICE PROCESS FOR CLASSIFICATION
OF VARIOUS MATERIALS

ABSTRACT

- 5 A method for classification of various materials and/or mineral with variable sizes is provided. The particles obtained through the said method is capable of both efficient classification of material and the complete waste management and recycling system with maximum recovery of process water for reuse. A system for classification of various materials and/or mineral with variable sizes and extraction of fine graded
- 10 particles with waste management and recycling system with maximum recovery of process is also provided.
