(54) Title: TECHNIQUES AND APPARATUSES FOR SYNCHRONIZATION SIGNAL SCANNING BASED AT LEAST IN PART
ON A SYNCHRONIZATION RASTER

(57) Abstract: Certain aspects of the present disclosure generally relate to wireless communication. In some aspects, a user equipment may identify that a band is associated with a first numerology and a second numerology for synchronization, and/or perform a synchronization scan to identify a synchronization signal block using stored data, wherein the stored data includes data regarding a plurality of frequency locations of the band, and wherein the synchronization scan is performed with regard to a first set of frequency locations, of the plurality of frequency locations, associated with the first numerology, and wherein the synchronization scan is performed with regard to a second set of frequency locations, of the plurality of frequency locations, associated with the second numerology, wherein the second set of frequency locations includes a proper subset of frequency locations of the plurality of frequency locations.
