ABSTRACT

The invention provides a workpiece positioning mechanism and a workpiece inspection apparatus, each of which stably maintains precise positional relationship between a tray with a workpiece placed thereon and an inspection device for the workpiece by a simple structure.

A workpiece positioning mechanism (10) includes: a tray (26) on which a workpiece (30) is placed; a frame (45) in which a notch (49) defining a height position of the tray (26) positioned in an inspection region (17) is formed; a plurality of pins (43) that are provided on the frame (45) and position the tray (26); and a bias applier that positions the tray (26) in the inspection region (17) by biasing a bottom surface.
