(54) Title: HORTICULTURAL APPARATUS AND METHODS

(57) Abstract: A modular container for particulate plant growth media, the container comprising: an elongate tubular body having a longitudinal axis and arranged to be supported in an upright orientation; the tubular body defining an internal space and including a continuous wall having plurality of ventilation openings and a plurality of apertures for receiving tubelets for plants or blanking caps; the tubular body further including a first collar portion at one end of the continuous wall and a second collar portion at an opposed end of the continuous wall; and the first collar portion being engageable by a first end cover and the second collar portion being engageable by a second end cover; wherein individual apertures in the continuous wall either closed by the blanking caps or populated by a tubelet that communicates with the internal space of the tubular body and is selectively removable from a respective aperture; and wherein the first end cover further comprises a support arrangement adapted to be suitably engaged by an overhead arrangement for suspending said container.
