(54) Title: SYSTEMS AND METHODS FOR DETECTING HANDLING EVENTS FOR PORTABLE DEVICES

WO 2025/144827 A1

FIG. 2

(57) Abstract: An event detection system includes processing circuitry with one or more processors. The event detection system also includes memory storing instructions, that when executed by the processing circuitry, cause the processing circuitry to process positioning data for a portable device to identify an occurrence of an improper handling event for the portable device by a user, and update a user event profile for the user by adding the improper handling event to a quantity of improper handling events for the portable device by the user. The instructions, that when executed by the processing circuitry, cause the processing circuitry to apply one or more restrictions for the user in response to determining that the quantity of improper handling events for the portable device by the user meets or exceeds an event threshold.
