(54) Title: METHOD OF DISPLAYING MARKET DATA WHEN APPLYING A MARK-UP TO NET FARES

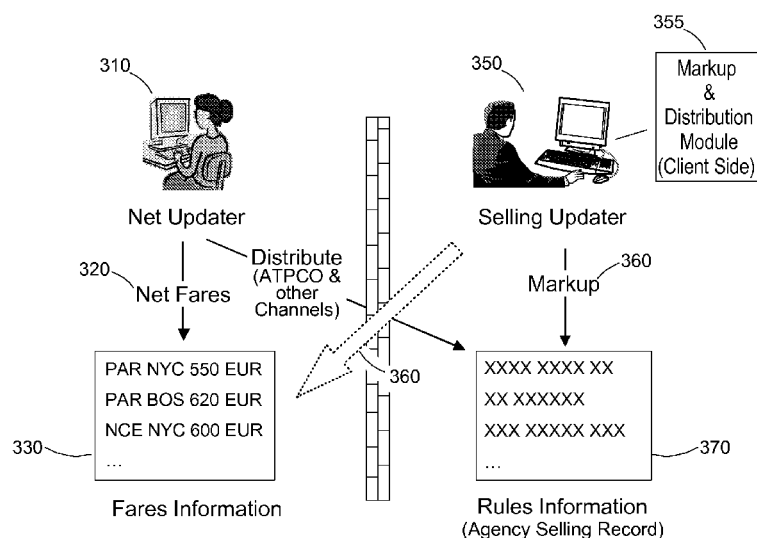

FIG. 3

(57) Abstract: A method of applying a
mark-up to net fares from agency selling
records received by a selling updater is
described. Upon request of the selling up-
dater the method includes enabling the
display of market data corresponding to
the agency selling records. The display of
market data includes first requesting a list
of city pairs to be built on the basis of de-
fault search. The city pairs matching the
default search criteria are then retrieved
from a fares database and returned to the
selling updater. After the selling updater
has selected some or all city pairs, a list of
net fares is further requested and retrieved
from the fares database. Rule records for
the retrieved net fares are also retrieved
from a rules database. Net fares and rule
records are associated and returned to the
selling updater to be further associated
with each matching item of the agency
selling record. The method allows the dis-
play of the requested market data and per-
mits the selling updater to decide on what
mark-up to apply on the net fare.
