ABSTRACT

5 A denture base on which an artificial replacement of teeth is
implanted, characterized in that the denture base includes a
plurality of dentures arranged and fixed in a plastic or metal
foundation, wherein the dentures are arranged along with the
occlusion curve expressed based on the central point set up on the
10 resultant line showing the radius of curvature R of the optimal row
of teeth obtained from the roentgenogram of a patient's temporal
areas of the head, and the direction of the standard resultant of the
power produced at the time of occlusion.
