(54) Title: NANOTUBE POLYMER COMPOSITE COMPOSITIONS AND METHODS OF MAKING

Resistance of discs (circles) and rectangular plaques (triangles) molded from Material A
Error bars represent +/- 1 standard deviation based on 3 measurements

(57) Abstract: Embodiments of the invention include compositions comprising a polymer an amount of nanotubes extrusion compounded together. The amount of the nanotubes dispersed in the polymer forms a composition with a storage modulus G' that does not increase further extrusion compounding of the composition. Extrusion compounded compositions of conductive nanotubes and polymer can be molded into electrically dissipative articles whose resistivity decreases with decreasing shear flow in the molding process.
