ULTRAVIOLET CURABLE COMPOSITION, OPTICAL DISC AND METHOD FOR
PRODUCING AN OPTICAL DISC

5

To obtain a digital video disc having excellent durability in
a high temperature and high humidity environment, an
ultraviolet curable composition prepared such that water in
which the cured coating film has been immersed has a specific
10 conductivity of 100 μ S/cm or less is provided as an adhesive
for use in bonding two discs with information recording
layers, respectively, having thin films of different kinds of
material.
