

**AN ARRAY OF ELEMENTS
AND
A HUMAN-COMPUTER INTERFACE DEVICE**

5

ABSTRACT

Various embodiments provide an array of elements, wherein each element is pivotally coupled to an adjacent first element by a first pivotal coupling and to an adjacent second element by a second pivotal coupling, the first pivotal coupling being operable to pivot about an axis which is substantially orthogonal to an axis about which the second pivotal coupling is operable to pivot. Various embodiments provide a human-computer interface device comprising the array of elements.
