

A Method for Logging a User in to a Mobile Device

Abstract

A method is provided for logging a first user in to a
5 mobile device being in a locked mode. The method
comprising: storing a password associated with the first
user and information that relates to a facial image of
that first user; when the mobile device is in a locked
mode: receiving a password inserted by a user; comparing
10 the received password with the stored password and
determining whether they match; if a match is found,
prompting an image capturing device to capture an image;
retrieving information that relates to a facial image from
the captured image and comparing that information with the
15 stored information; if the retrieved information matches
the stored information, unlocking the mobile device.
