FIG. 1

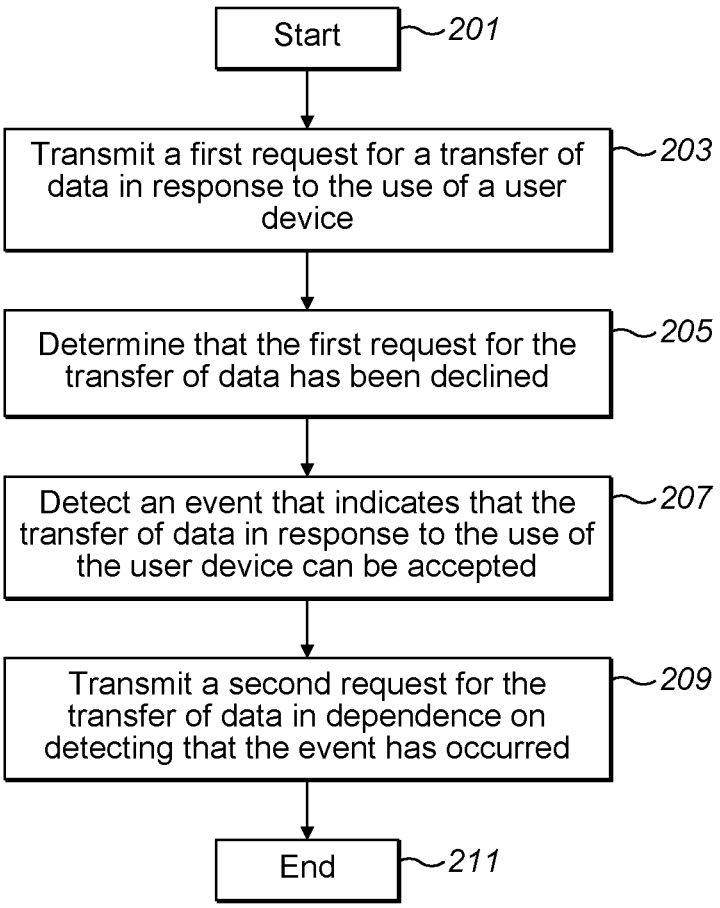

Start
201
Transmit a first request for a transfer of data in response to the use of a user device
203
Determine that the first request for the transfer of data has been declined
205
Detect an event that indicates that the transfer of data in response to the use of the user device can be accepted
207
Transmit a second request for the transfer of data in dependence on detecting that the event has occurred
209
End
211

FIG. 3

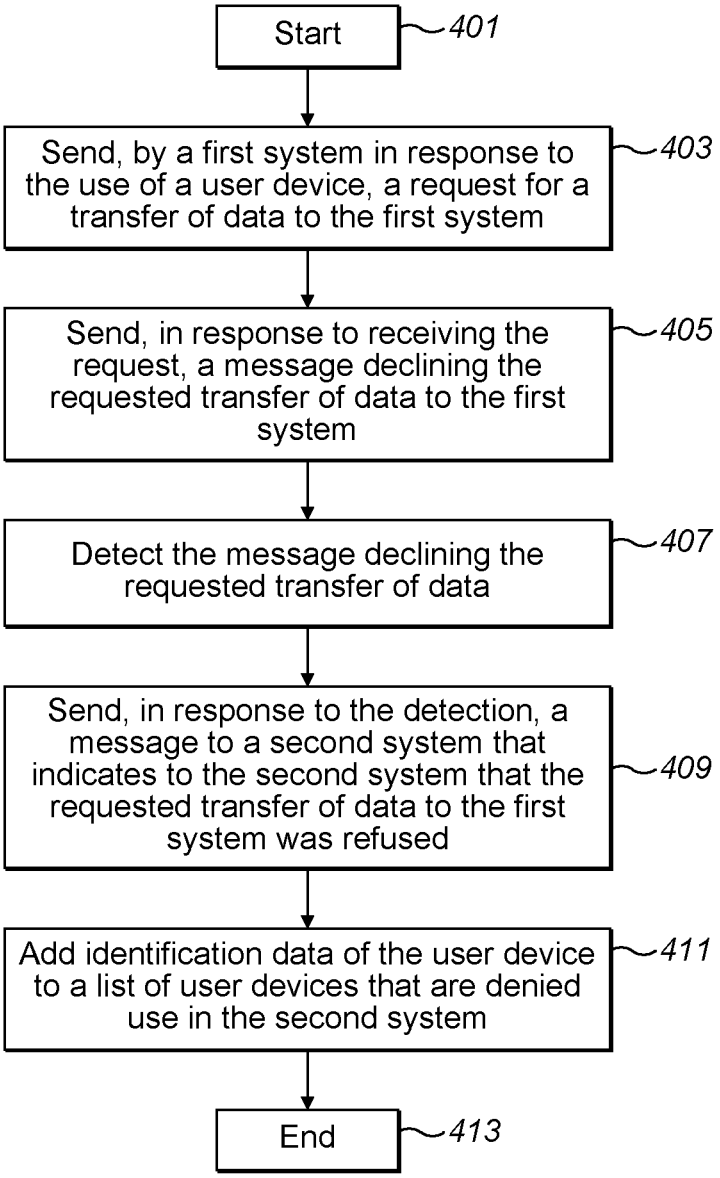

Start
401
Send, by a first system in response to the use of a user device, a request for a transfer of data to the first system
403
Send, in response to receiving the request, a message declining the requested transfer of data to the first system
405
Detect the message declining the requested transfer of data
407
Send, in response to the detection, a message to a second system that indicates to the second system that the requested transfer of data to the first system was refused
409
Add identification data of the user device to a list of user devices that are denied use in the second system
411
End
413
