DRAWINGS

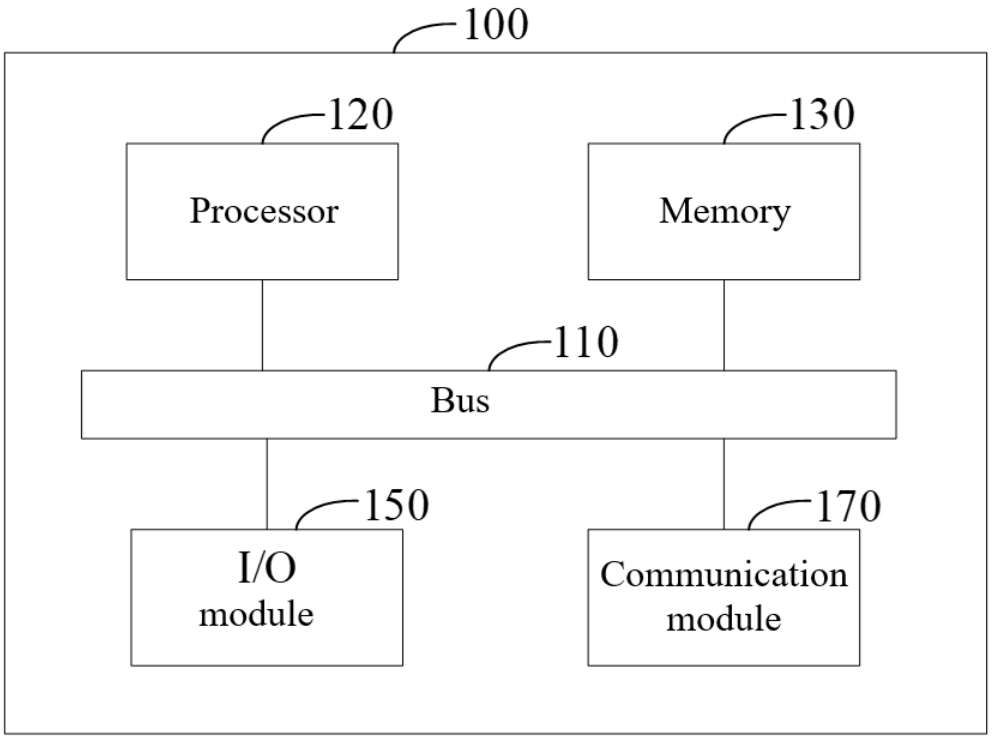

FIG. 1

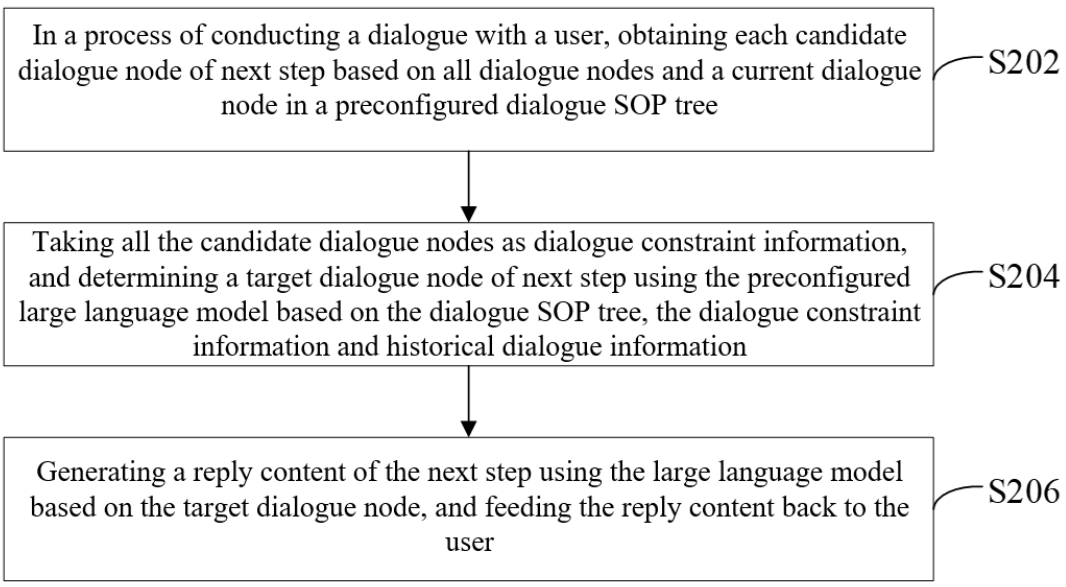

FIG. 2

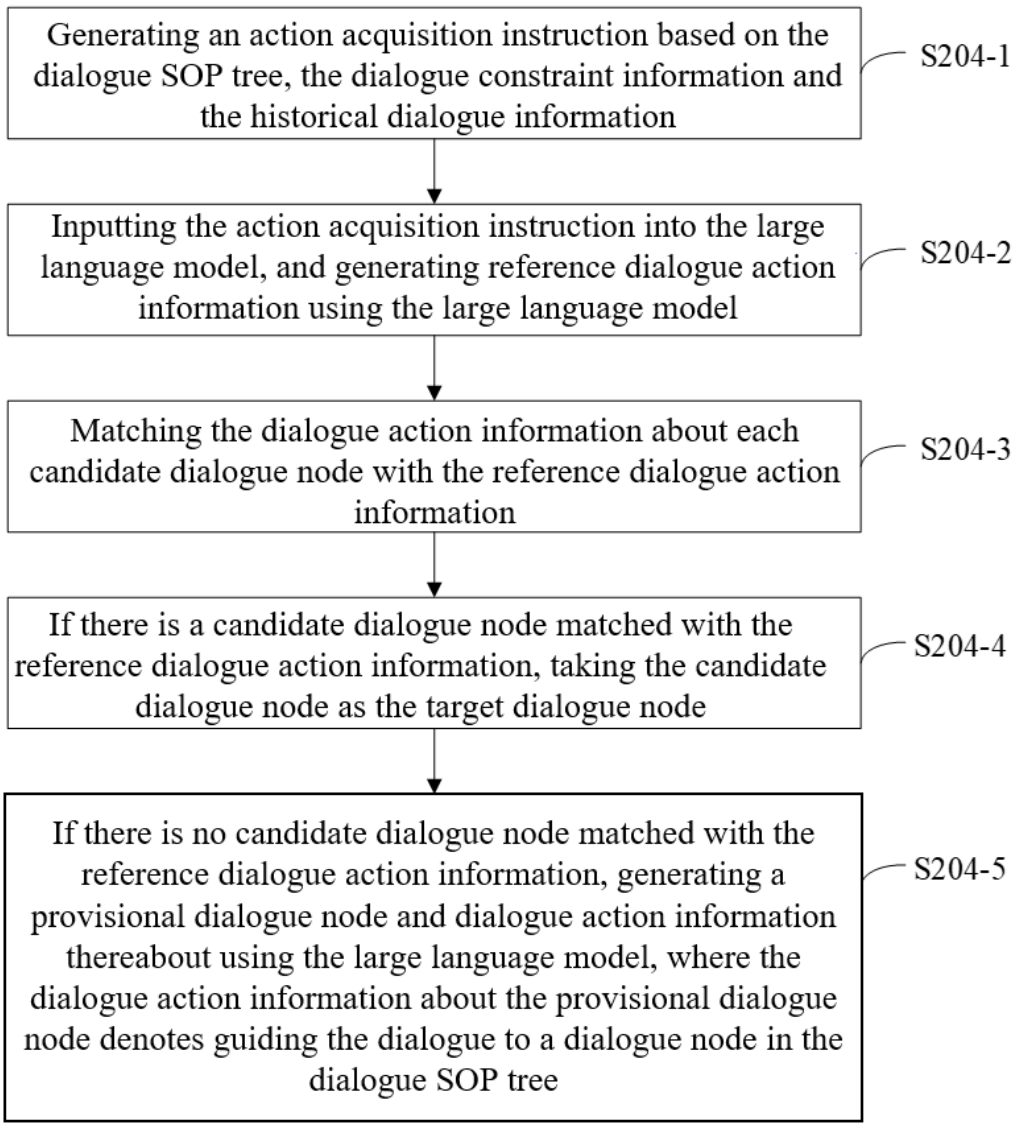

Generating an action acquisition instruction based on the dialogue SOP tree, the dialogue constraint information and the historical dialogue information
S204-1
Inputting the action acquisition instruction into the large language model, and generating reference dialogue action information using the large language model
S204-2
Matching the dialogue action information about each candidate dialogue node with the reference dialogue action information
S204-3
If there is a candidate dialogue node matched with the reference dialogue action information, taking the candidate dialogue node as the target dialogue node
S204-4
If there is no candidate dialogue node matched with the reference dialogue action information, generating a provisional dialogue node and dialogue action information thereabout using the large language model, where the dialogue action information about the provisional dialogue node denotes guiding the dialogue to a dialogue node in the dialogue SOP tree
S204-5
