(54) Title: SYSTEM AND METHOD FOR CUSTOMIZABLE PRESCHEDULED DISPATCHING FOR TRANSPORTATION SERVICES

FIG. 1

(57) Abstract: A method for providing a customized platform for facilitating prescheduling transport and delivery services based on estimated driver availability and compatibility with individual customers. A service provider and customer may be matched based on favorites, preferred or regular and a dispatch matrix of preferences, limitations, and indicators. Customers and service providers may create favorites lists, preferred lists, and blacklists according to feedback with each other to enable customers to receive service from their favorite service providers and vice versa, and prevent service between customers and service providers when blacklisted. Customers and drivers may also negotiate prices for requested services based at least in part on supply and demand. The method provides for automatically scheduling transportation services in which service requests are received and automatically scheduled based on a partner driver arrangement using a micro-dispatch system without live dispatching agent involvement.
