(57) **Abstract:** The present disclosure relates to the technical field of communications, and provides a service control method and apparatus, a user equipment, a base station, and a storage medium. The method comprises: transmitting priority configuration information to a base station, the priority configuration information being used for indicating a priority between a small data transmission (SDT) service and other services; in the process of executing the SDT service, determining a scheduling indication transmitted by the base station and used for scheduling other services; and on the basis of the priority configuration information and the scheduling indication, determining whether to continue to execute the SDT service. According to the method provided by the present disclosure, when the

SDT service conflicts with other services, the service having a higher priority is preferentially executed, and thus, a service process having a higher priority can be retained, and the loss of data of the service having the higher priority is avoided.

(57) 摘要: 本公开提出一种业务控制方法、装置、用户设备、基站及存储介质, 属于通信技术领域。该方法包括: 向基站发送优先级配置信息, 所述优先级配置信息用于指示小数据传输SDT业务与其他业务之间的优先级; 在执行所述SDT业务的过程中, 确定基站发送的用于调度其他业务的调度指示, 基于所述优先级配置信息和所述调度指示确定是否继续执行所述SDT业务。本公开提供的方法中, 当SDT业务与其他业务发生冲突时, 会优先执行优先级较高的业务, 从而可以保留更高优先级的业务过程, 避免了高优先级业务的数据的丢失。
