

ABSTRACT

AROMA GENERATOR-EQUIPPED MASSAGING APPARATUS

A massaging apparatus has an aroma generator for emitting aroma to allow users to have massage in a relaxed state. The massaging apparatus comprises an air bag (25) and an air pump (20), and includes an additional mechanism comprising the aroma generator for emitting aroma by utilizing high-pressure air supplied from the air pump (20). Specifically, the massaging apparatus includes a switching valve (24) having a delivery port for feeding high-pressure air from the air pump toward the air bag, and an injection tube (22) for providing connection between the delivery port of the switching valve and the air bag, and also includes a switching valve (24) having a delivery port for feeding high-pressure air from the air pump toward the additional mechanism, and an injection tube (22) for providing connection between the delivery port of the switching valve and the additional mechanism.
