

ABSTRACT OF THE DISCLOSURE

A pair of cable guides are compactly installed while preventing interference between them. A transport facility includes: a track; and a first and a second transport vehicles that travel along the same track. In order to supply electric power to the transport vehicles, it is provided with a flexible first cable guide, which has a front-end attached to the first vehicle and a base-end fixed to the track, is folded back in a U-shape between the base-end and the front-end, is provided on one side of the track, and supplies electric power to the first vehicle, and a flexible second cable guide, which has a front-end attached to the second vehicle and a base-end fixed to the track, is folded back in a U-shape between the base-end and the front-end, is provided on the other side, and supplies electric power to the second vehicle.
