

ABSTRACT

This door opening device 50 comprises a door 4a for opening and closing the open side 3a of a body 2, a rotating body 56, a slider 59 disposed on the rotating body 56, and a cam surface 60a for guiding the slider 59, and opens the door 4a by sliding the slider 59 between a starting point Ps and an end point Pe. In this door opening device 50, the tangent of the cam surface 60a is inclined with respect to the moving direction D1 of the slider 59 on the end point Pe, and the slider 59 is rotated in the direction away from a pivot shaft 4c.
