(54) Title: CHOKeless SINK STRAINER

(57) Abstract: The invention resolves the choking problem of the existing sink strainers. The new design has a water outlet and a residues settlement area. See figure 7 for the concept design. The water outlet is designed above the surface of the sink and the settlement area is below the surface. The residues will eventually settle down in the settlement area when the water flows through the strainer. The water outlet will not be covered by the residues as it is above the

surface, With these two features thus no choking.
