(54) Title: SYSTEM AND METHOD FOR ADVANCED INTEROPERABILITY

FIG. 20

(57) Abstract: Enhanced interoperability (e.g., connectivity, communication, processing, routing, billing, etc.) capabilities are provided through an IP eXchange (IPX) facility that among other things may offer a simple, consolidated, etc. interface mechanism and which may leverage various pools of data to expeditiously process and route a quanta of data (including conventional SMS, MMS, etc. messaging; VoIP and other audio/video data streams; SIP-addressed artifacts; signaling data; voice call data; application data; etc.).
