(54) Title: WET WIPE HAVING IMPROVED CLEANING CAPABILITIES

FIG. 4

(57) Abstract: A wet wipe that is formed from a nonwoven structure that comprises a matrix of at least one meltblown fibrous material and at least one secondary fibrous material is disclosed. A weight ratio of the at least one secondary fibrous material to the at least one meltblown fibrous material may be between about 40/60 to about 90/10. Additionally, the nonwoven structure has a first side with a textured surface having a three-dimensional texture that includes a plurality of peaks and valleys and a second side with a substantially planar surface. The nonwoven structure includes about 150 to about 600 wt. % of a liquid solution to prepare a wet wipe. The difference in a cleaning pickup percentage between the first side and the second side of the wet wipe is less than 30%, more desirably less than 20%, and even more desirably less than 15%.
