FIG. 1

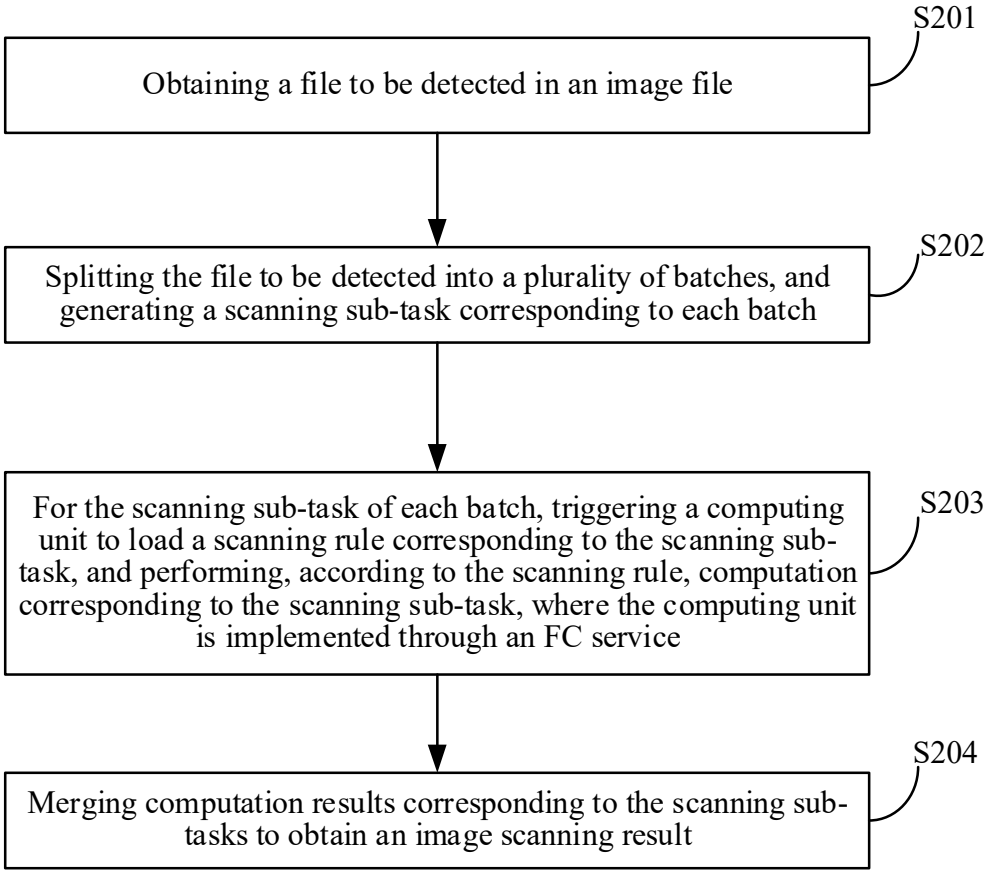

S201
Obtaining a file to be detected in an image file
S202
Splitting the file to be detected into a plurality of batches, and generating a scanning sub-task corresponding to each batch
S203
For the scanning sub-task of each batch, triggering a computing unit to load a scanning rule corresponding to the scanning sub-task, and performing, according to the scanning rule, computation corresponding to the scanning sub-task, where the computing unit is implemented through an FC service
S204
Merging computation results corresponding to the scanning sub-tasks to obtain an image scanning result
