(54) Title: DISK RECORDING MEDIUM, REPRODUCTION DEVICE AND METHOD FOR PERFORMING REPRODUCTION ON DISK RECORDING MEDIUM

(57) Abstract

A device and method for protection of legitimate software against used software and counterfeit software in recording media. The device includes a disk set in a main unit. A specific title code is used, and if this title code has been registered, the main unit shifts to a normal operation. If the code has not been registered, verification software is initiated, PG detection is performed, and when a PG pattern and verification data match, the code is registered in the COCT. If matching does not occur, the disk is processed as illegitimate software.
