

IN-LINE TYPE FILM FORMING APPARATUS AND METHOD OF
MANUFACTURING MAGNETIC RECORDING MEDIUM USING THE SAME

5

ABSTRACT OF THE DISCLOSURE

Provided is an in-line type film forming apparatus including a processing chamber which is disposed to deviate from a closed path and is connected to a corner chamber, a first loading and unloading unit which unloads a substrate from a carrier and
10 moves the substrate to the inside of the processing chamber, a second loading and unloading unit which unloads the substrate processed in the processing chamber and loads the substrate on the carrier, and a control device which performs control of driving the first and second loading and unloading units to unload the substrate from the carrier and to move the substrate to the inside of the processing chamber, and to take out the
15 substrate processed in the processing chamber in advance from the processing chamber and to load the substrate on the carrier.
