

Description

AZAINDOLE DERIVATIVE

[Technical Field]

[0001]

The present invention relates to a novel azaindole derivative having a selective JAK3-inhibitory effect and a pharmaceutical composition containing the azaindole derivative as an active ingredient.

[Background Art]

[0002]

It has been known that JAK3, as well as JAK1, JAK2 and TYK2, is a non-receptor tyrosine kinase belonging to a JAK family, and that JAK3 is involved in the signaling of various cytokines.

JAK1, JAK2 and TYK2 are expressed in a wide range of tissues, whereas the expression of JAK3 is mainly limited to lymphocytes such as T cells, B cells, and natural killer cells. JAK1- and JAK2-deficient mice are embryonic lethal, or die soon after the birth, whereas JAK3-deficient mice or humans develop severe combined immunodeficiency due to the lymphocyte dysfunction.

[0003]

It is assumed that a JAK3 inhibitor inhibit the signals of six types of cytokines (i.e., IL-2, IL-4, IL-7,

IL-9, IL-15, and IL-21), so as to specifically suppress the function of lymphocytes such as T cells or B cells, which play an important role in an immune system. Thus, it is anticipated that such a JAK3 inhibitor can be an effective therapeutic agent for diseases associated with activation of the aforementioned cells, having minimum expression of side effects (Non Patent Literatures 1 and 2).

It has been reported that examples of the disease, which can be treated with the JAK3 inhibitor, include autoimmune disease (rheumatoid arthritis, systemic lupus erythematosus, scleroderma, polymyositis-dermatomyositis, Sjogren's syndrome, Behcet's disease, etc.), allergic disease (bronchial asthma, allergic rhinitis/hay fever, atopic dermatitis, food allergy, anaphylaxis, drug allergy, hives, conjunctivitis, etc.), nervous system disease (multiple sclerosis, Alzheimer's disease, etc.), inflammatory bowel disease (ulcerative colitis, Crohn's disease), psoriasis, contact dermatitis, diabetes, celiac disease, viral infectious disease, acute respiratory distress syndrome (ARDS), graft-versus-host disease (GVHD), transplant rejection, hematologic malignancy (lymphoma, leukemia), and other malignant tumors (Non Patent Literatures 3 to 8).

[0004]

Moreover, Tofacitinib (Pfizer), a JAK3 inhibitor, has been used as a therapeutic agent for rheumatoid arthritis

in clinical sites. It has been reported that this JAK3 inhibitor has low selectivity to JAK3, and thus that side effects (lipid rise, anemia, neutropenia, immunosuppression, etc.) are caused by inhibition of JAK1 and JAK2 (Non Patent Literature 9).

Furthermore, an azaindole derivative having a cyclic substituent at 4-position and an azaindole derivative having cyclic substituents at 3- and 5-positions have been reported as JAK inhibitors. However, these azaindole derivatives have low selectivity to JAK3, and the inhibitory activity thereof is not sufficient (Patent Literatures 1 and 2).

[Summary of Invention]

[Technical Problem]

[0007]

It is an object of the present invention to provide a novel compound, which selectively and strongly inhibits JAK3, or a salt thereof, and a pharmaceutical composition containing the same.

[Solution to Problem]

[0008]

As a result of intensive studies directed toward achieving the aforementioned object, the present inventors

TH0092

have found that a compound group, which contains azaindole as a basic structure, has a cycloalkenyl group at 4-position, and further has a cyclic substituent at 3-position, has a selective inhibitory activity on JAK3. Moreover, the inventors have found that the compound of the present invention has an excellent effect to suppress the growth of human peripheral blood mononuclear cells (hereinafter referred to as PBMC), and have then confirmed that the compound is useful as a pharmaceutical agent for treating various diseases involving JAK3 (in particular, autoimmune disease). Furthermore, the inventors have confirmed that the compound of the present invention has excellent oral absorbability and is useful as an oral pharmaceutical product, thereby completing the present invention.

[0009]

The present invention provides the following [1] to [21].

[0010]

[1] A compound of the following formula (I), or a salt thereof:

[0011]

[0012]

where

R_1 represents an optionally substituted C_4 - C_{10} cycloalkyl group, an optionally substituted C_4 - C_{10} cycloalkenyl group, an optionally substituted C_4 - C_{10} cycloalkynyl group, an optionally substituted C_6 - C_{14} aromatic hydrocarbon group, or an optionally substituted 4- to 10-membered saturated or unsaturated heterocyclic group;

R_2 represents a hydrogen atom, a halogen atom, a hydroxy group, a cyano group, a nitro group, $-C(=O)R_x$, $-C(=O)OR_x$, $-C(=O)N(R_x)(R_y)$, $-N(R_x)(R_y)$, $-NR_xC(=O)R_y$, $-NR_xS(=O)_2R_y$, $-NR_xC(=O)OR_y$, $-NR_xC(=O)N(R_y)(R_z)$, $-NR_xS(=O)_2N(R_y)(R_z)$, $-OC(=O)R_x$, $-OC(=O)OR_x$, $-OC(=O)N(R_x)(R_y)$, $-SR_x$, $-S(=O)_2R_x$, $-S(=O)_2OR_x$, an optionally R_b -substituted C_1 - C_6 alkyl group, an optionally R_b -substituted C_2 - C_6 alkenyl group, an optionally R_b -substituted C_2 - C_6 alkynyl group, an optionally R_b -substituted C_1 - C_6 alkoxy group, an optionally R_c -substituted C_3 - C_{10} cycloalkyl group, an optionally R_c -substituted C_6 - C_{14} aromatic hydrocarbon group, or an

optionally R_c -substituted 4- to 10-membered saturated or unsaturated heterocyclic group;

R_3 represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1 - C_6 alkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, or a C_1 - C_6 alkoxy group;

R_4 represents an optionally R_b -substituted C_2 - C_6 alkenyl group or an optionally R_b -substituted C_2 - C_6 alkynyl group;

R_b represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1 - C_6 alkoxy group, a di- or mono- $(C_1$ - C_6 alkyl)amino group, or a 4- to 10-membered saturated or unsaturated heterocyclic group;

R_c represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, an oxo group, an imino group, an N-oxide group, a C_1 - C_6 alkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_1 - C_6 alkoxy group, or a di- or mono- $(C_1$ - C_6 alkyl)amino group;

R_x , R_y and R_z , which are the same or different, each represent a hydrogen atom, a C_1 - C_6 alkyl group, a C_1 - C_6 haloalkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_3 - C_{10} cycloalkyl group, a C_6 - C_{14} aromatic hydrocarbon group, or a 4- to 10-membered saturated or unsaturated heterocyclic group;

m represents an integer of 0 to 3; and

n represents an integer of 0 to 2.

[0013]

[2] The compound according to [1] or a salt thereof, where a group with which the C₄-C₁₀ cycloalkyl group, C₄-C₁₀ cycloalkenyl group, C₄-C₁₀ cycloalkynyl group, C₆-C₁₄ aromatic hydrocarbon group or 4- to 10-membered saturated or unsaturated heterocyclic group, which is represented by R₁, is optionally substituted is R_a, and the R_a represents a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, -C(=O)R_x, -C(=O)OR_x, -C(=O)N(R_x)(R_y), -C(=O)SR_x, -C(=S)OR_x, -C(=O)ON(R_x)(R_y), -N(R_x)(R_y), -NR_xC(=O)R_y, -NR_xS(=O)₂R_y, -NR_xC(=O)OR_y, -NR_xC(=O)N(R_y)(R_z), -NR_xS(=O)₂N(R_y)(R_z), -N(R_x)-OR_y, =NR_x, =N-OR_x, -OC(=O)R_x, -OC(=S)R_x, -OC(=O)OR_x, -OC(=O)N(R_x)(R_y), -OC(=S)OR_x, -SR_x, -S(=O)₂R_x, -S(=O)₂OR_x, -S(=O)₂N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₂-C₆ alkenyl group, an optionally R_b-substituted C₂-C₆ alkynyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, an optionally R_c-substituted C₃-C₁₀ cycloalkyl group, an optionally R_c-substituted C₆-C₁₄ aromatic hydrocarbon group, or an optionally R_c-substituted 4- to 10-membered saturated or unsaturated heterocyclic group.

[3] The compound according to [1] or [2], or a salt thereof, where R₁ represents an optionally R_a-substituted C₅-C₇ cycloalkenyl group, an optionally R_a-substituted C₆-C₁₀ aromatic hydrocarbon group, or an optionally R_a-substituted monocyclic 4- to 7-membered unsaturated

heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O.

[4] The compound according to any one of [1] to [3] above, or a salt thereof, wherein R₁ represents a cyclopentenyl group, a cyclohexenyl group, a phenyl group, a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a dihydropyranyl group, a dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, and the cycloalkenyl group, aromatic hydrocarbon group, and unsaturated heterocyclic group are optionally substituted with R_a.

[5] The compound according to any one of [1] to [4] above, or a salt thereof, where R₁ represents a cyclopentenyl group, a cyclohexenyl group, a phenyl group, a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a dihydropyranyl group, a dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, and the cycloalkenyl group, aromatic hydrocarbon group, and unsaturated heterocyclic group are optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an oxo group, an N-oxide group, a formyl group, a C₁-C₆ alkyl group (which is optionally substituted with a

group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group), a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom), and a 4- to 10-membered saturated heterocyclic group.

[6] The compound according to any one of [1] to [5], or a salt thereof, where R₁ represents a cyclopentenyl group; a cyclohexenyl group; a phenyl group; a furanyl group, which is optionally substituted with a group selected from the group consisting of a formyl group and a C₁-C₆ alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group); a 1H-pyrazolyl group, which is optionally substituted with a group selected from the group consisting of a C₁-C₆ alkyl group and a 4- to 10-membered saturated heterocyclic group; a thiazolyl group; an oxazolyl group; an isoxazolyl group; a 1,3,4-thiadiazolyl group; a 1,2,4-oxadiazolyl group; a 1,3,4-oxadiazolyl group, which is optionally substituted with a C₁-C₆ alkyl group; a pyridyl group, which is optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an N-oxide group, a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group), and a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom); a dihydropyranyl group; a dihydrofuranyl group; or a 4,5-dihydro-1,3,4-oxadiazolyl group, which is

optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group.

[7] The compound according to any one of [1] to [6], or a salt thereof, where R₂ represents a hydrogen atom, a cyano group, -C(=O)OR_x, -C(=O)N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, or an optionally R_c-substituted monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O.

[8] The compound according to any one of [1] to [7], or a salt thereof, where R₂ represents a hydrogen atom; a cyano group; a (C₁-C₆ alkoxy)carbonyl group; a carbamoyl group; a di- or mono-(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group, which is optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-C₆ alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C₁-C₆ alkyl group.

[9] The compound according to any one of [1] to [8] above, or a salt thereof, where m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group or a C₂-C₆ alkynyl group, and

in the formula (I), the following structure:

is any one of the following structures:

[0014]

[10] The compound according to any one of [1] to [9], or a salt thereof, where

R_1 represents a cyclopentenyl group; a cyclohexenyl group; a phenyl group; a furanyl group, which is optionally substituted with a group selected from the group consisting of a formyl group and a C_1 - C_6 alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono- (C_1 - C_6 alkyl)amino group); a 1H-pyrazolyl group, which is optionally substituted with a group selected from the group consisting of a C_1 - C_6 alkyl group and a 4- to 10-membered saturated heterocyclic group; a thiazolyl group; an oxazolyl group; an isoxazolyl group; a 1,3,4-thiadiazolyl group; a 1,2,4-oxadiazolyl group; a 1,3,4-oxadiazolyl group, which is optionally substituted with a C_1 - C_6 alkyl group; a pyridyl group, which is optionally substituted with a group selected from the group

consisting of a halogen atom, an amino group, a hydroxy group, an N-oxide group, a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group), and a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom); a dihydropyranyl group; a dihydrofuranyl group; or a 4,5-dihydro-1,3,4-oxadiazolyl group, which is optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group,

R₂ represents a hydrogen atom; a cyano group; a (C₁-C₆ alkoxy)carbonyl group; a carbamoyl group; a di- or mono-(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group, which is optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-C₆ alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C₁-C₆ alkyl group,

m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

[11] The compound according to any one of [1] to [10], or a salt thereof, where the compound is any of compounds represented by the following (1) to (11):

- (1) N-(3-(3-phenyl-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (2) N-(3-(3-(1H-pyrazol-4-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (3) N-(3-(3-(2-methoxypyridin-3-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (4) N-(3-(3-(furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (5) N-(3-(3-(4-(hydroxymethyl)furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (6) N-(3-(3-(2,5-dihydrofuran-3-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (7) N-(3-(3-(oxazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (8) N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (9) (S)-N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,

TH0092

(10) N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclopent-3-en-1-yl)acrylamide, and

(11) (S)-N-(3-(3-(isoxazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide.

[0015]

[12] A JAK3 inhibitor containing, as an active ingredient, the compound according to any one of [1] to [11] or a salt thereof.

[13] A pharmaceutical composition containing the compound according to any one of [1] to [11] or a salt thereof.

[14] The pharmaceutical composition according to [13], where the pharmaceutical composition is a pharmaceutical composition for treating a disease involving JAK3.

[15] An agent for preventing and/or treating rheumatoid arthritis or multiple sclerosis, containing, as an active ingredient, the compound according to any one of [1] to [11] or a salt thereof.

[16] The compound according to any one of [1] to [11] or a salt thereof, for treating a disease involving JAK3.

[17] The compound according to any one of [1] to [11] or a salt thereof, for preventing and/or treating rheumatoid arthritis or multiple sclerosis.

[18] Use of the compound according to any one of [1] to [11] or a salt thereof for producing a medicament for treating a disease involving JAK3.

[19] Use of the compound according to any one of [1] to [11] or a salt thereof for producing a medicament for

preventing and/or treating rheumatoid arthritis or multiple sclerosis.

[20] A method for preventing and/or treating a disease involving JAK3, containing administering the compound according to any one of [1] to [11] or a salt thereof.

[21] A method for preventing and/or treating rheumatoid arthritis or multiple sclerosis, containing administering the compound according to any one of [1] to [11] or a salt thereof.

[Advantageous Effects of Invention]

[0016] .

The present invention provides a novel azaindole derivative useful as a selective JAK3 inhibitor, which is of the above formula (I), or a salt thereof.

It has been revealed that the compound of the present invention or a salt thereof has an excellent selective JAK3-inhibitory activity and suppresses the growth of human PBMC based on JAK3 signals. In addition, the compound of the present invention has excellent oral absorbability, and thus, it is useful as a pharmaceutical agent for oral administration. Accordingly, the compound of the present invention or a salt thereof is capable of preventing and/or treating a disease involving JAK3 such as rheumatoid arthritis and multiple sclerosis, without having severe side effects caused by JAK1 and JAK2 (lipid rise, anemia, neutropenia, immunosuppression, etc.).

[Description of Embodiments]

[0017]

The compound of the present invention of the above formula (I) is a compound, which contains azaindole as a basic structure, has a cycloalkenyl group at 4-position, and further has a cyclic substituent at 3-position, and it is a novel compound, which is not described in any one of the aforementioned Citations.

[0018]

In the description regarding substituents in the present description, "C_x-C_y" indicates a substituent in which the number of carbon atoms in the alkyl portion or alkoxy portion is X to Y. For example, "C₁-C₆ alkyl group" indicates an alkyl group having 1 to 6 carbon atoms, and "(C₁-C₆ alkoxy)carbonyl group" indicates a carbonyl group to which an alkoxy group having 1 to 6 carbon atoms binds. In addition, "X- to Y-membered" indicates that the number of atoms constituting a ring (the number of ring members) is X to Y. For example, "4- to 10-membered saturated heterocyclic group" means a saturated heterocyclic group having 4 to 10 ring members.

In the present description, specific examples of the "halogen atom" include a fluorine atom, a chlorine atom, a bromine atom, and an iodine atom.

In the present description, the "alkyl group" is a linear or branched saturated hydrocarbon group, and

specific examples of the alkyl group include a methyl group, an ethyl group, an n-propyl group, an isopropyl group, an n-butyl group, an isobutyl group, a sec-butyl group, a tert-butyl group, an n-pentyl group, and an n-hexyl group.

[0019]

In the present description, the "alkenyl group" is a linear or branched unsaturated hydrocarbon group containing at least one carbon-carbon double bond, and specific examples of the alkenyl group include a vinyl group, an allyl group, a 1-propenyl group, a 1-methylvinyl group, a 1-butenyl group, a 2-butenyl group, and a 3-butenyl group.

[0020]

In the present description, the "alkynyl group" is a linear or branched unsaturated hydrocarbon group containing at least one carbon-carbon triple bond, and specific examples of the alkynyl group include an ethynyl group, a 1-propynyl group, a 2-propynyl group, a 1-butyne group, a 2-butyne group, and a 3-butyne group.

[0021]

In the present description, the "haloalkyl group" is a group in which one to all hydrogen atoms of the above described alkyl group are substituted with halogen atoms, and specific examples of the haloalkyl group include a monofluoromethyl group, a difluoromethyl group, a trifluoromethyl group, a 1-fluoroethyl group, a 2-

TH0092

fluoroethyl group, a 1,1-difluoroethyl group, a 1,2-difluoroethyl group, and a 2,2-difluoroethyl group.

[0022]

In the present description, the "alkoxy group" is an oxy group to which the above described alkyl group binds, and specific examples of the alkoxy group include a methoxy group, an ethoxy group, an n-propoxy group, an isopropoxy group, an n-butoxy group, an isobutoxy group, and a tert-butoxy group.

[0023]

In the present description, the "cycloalkyl group" is a monocyclic or polycyclic saturated hydrocarbon group, and specific examples of the cycloalkyl group include a cyclopropyl group, a cyclobutyl group, a cyclopentyl group, a cyclohexyl group, a cycloheptyl group, a decalyl group, and an adamantyl group.

[0024]

In the present description, the "cycloalkenyl group" is a monocyclic or polycyclic unsaturated hydrocarbon group containing at least one carbon-carbon double bond, and specific examples of the cycloalkenyl group include a cyclobutenyl group, a cyclopentenyl group, a cyclohexenyl group, and a cycloheptenyl group.

[0025]

In the present description, the "cycloalkynyl group" is a monocyclic or polycyclic unsaturated hydrocarbon group containing at least one carbon-carbon triple bond,

and specific examples of the cycloalkynyl group include a cyclobutynyl group, cyclopentynyl group, a cyclohexynyl group, and a cycloheptynyl group.

[0026]

In the present description, the "di- or mono-alkylamino group" is an amino group in which one or two hydrogen atoms are substituted with the above described alkyl groups, and specific examples of the di- or mono-alkylamino group include a methylamino group, a dimethylamino group, an ethylmethylamino group, and an isopropylamino group.

[0027]

In the present description, the "alkylcarbonyl group" is a carbonyl group to which the above described alkyl group binds, and specific examples of the alkylcarbonyl group include an acetyl group and a propionyl group.

In the present description, the "alkoxycarbonyl group" is a carbonyl group to which the above described alkoxy group binds, and specific examples of the alkoxycarbonyl group include a methoxycarbonyl group and an ethoxycarbonyl group.

[0028]

In the present description, "di- or mono-alkylcarbamoyl group" is a carbonyl group to which the above described di- or mono-alkylamino group binds, and specific examples of the di- or mono-alkylcarbamoyl group include a methylcarbamoyl group, a dimethylcarbamoyl group,

an ethylmethylcarbamoyl group, and an isopropylcarbamoyl group.

In the present description, the "alkylcarbonylamino group" is an amino group in which one hydrogen atom is substituted with the above described alkylcarbonyl group, and specific examples of the alkylcarbonylamino group include an acetamide group and propionamide group.

In the present description, "alkoxycarbonylamino group" is an amino group in which one hydrogen atom is substituted with the above described alkoxycarbonyl group, and specific examples of the alkoxycarbonylamino group include a methoxycarbonylamino group and an ethoxycarbonylamino group.

In the present description, the "alkylcarbonyloxy group" is an oxy group to which the above described alkylcarbonyl group binds, and specific examples of the alkylcarbonyloxy group include an acetoxy group and a propionyloxy group.

In the present description, the "alkoxycarbonyloxy group" is an oxy group to which the above described alkoxycarbonyl group binds, and specific examples of the alkoxycarbonyloxy group include a methoxycarbonyloxy group and an ethoxycarbonyloxy group.

In the present description, the "di- or mono-alkylcarbamoyloxy group" is an oxy group to which the above described di- or mono-alkylcarbamoyl group binds, and specific examples of the di- or mono-alkylcarbamoyloxy

group include a methylcarbamoyloxy group and a dimethylcarbamoyloxy group.

In the present description, the "alkylthio group" is a mercapto group in which a hydrogen atom is substituted with the above described alkyl group, and specific examples of the alkylthio group include a methylthio group and an ethylthio group.

In the present description, the "alkylsulfonyl group" is a sulfonyl group to which the above described alkyl group binds, and specific examples of the alkylsulfonyl group include a methylsulfonyl group and an ethylsulfonyl group.

In the present description, the "alkoxysulfonyl group" is a sulfonyl group to which the above described alkoxy group binds, and specific examples of the alkoxysulfonyl group include a methoxysulfonyl group and an ethoxysulfonyl group.

In the present description, the "alkylsulfonamide group" is an amino group in which one hydrogen atom is substituted with the above described alkylsulfonyl group, and specific examples of the alkylsulfonamide group include a methylsulfonamide group and an ethylsulfonamide group.

In the present description, the "di- or mono-alkylsulfamoyl group" is a sulfonyl group to which the above described di- or mono-alkylamino group binds, and specific examples of the di- or mono-alkylsulfamoyl group

include an N-methylsulfamoyl group and an N,N-dimethylsulfamoyl group.

In the present description, the "di- or mono-alkylsulfamoylamino group" is an amino group in which one hydrogen atom is substituted with the above described di- or mono-alkylsulfamoyl group, and specific examples of the di- or mono-alkylsulfamoylamino group include an N-methylsulfamoylamino group and an N,N-dimethylsulfamoylamino group.

[0029]

In the present description, the "aromatic hydrocarbon group" is a monocyclic or polycyclic aromatic hydrocarbon group, and it may be a group in which only some rings exhibit aromaticity. Specific examples include a phenyl group, a naphthyl group, and a tetrahydronaphthyl group.

[0030]

In the present description, the "saturated heterocyclic group" is a monocyclic or polycyclic saturated heterocyclic group having a heteroatom selected from the group consisting of N, S and O, and specific examples of the saturated heterocyclic group include a pyrrolidinyl group, a piperidinyl group, a piperazinyl group, a hexamethyleneimino group, a morpholino group, a thiomorpholino group, a homopiperazinyl group, an oxetanyl group, a tetrahydrofuranlyl group, and a tetrahydropyranlyl group.

[0031]

In the present description, the "unsaturated heterocyclic group" is a monocyclic or polycyclic, completely unsaturated heterocyclic group having a heteroatom selected from the group consisting of N, S and O (hereinafter also referred to as a "completely unsaturated heterocyclic group"), or a partially unsaturated heterocyclic group (hereinafter also referred to as a "partially unsaturated heterocyclic group"). Specific examples of the completely unsaturated heterocyclic group include an imidazolyl group, a thienyl group, a furanyl group, a pyrrolyl group, an oxazolyl group, an isoxazolyl group, a thiazolyl group, an isothiazolyl group, a thiadiazolyl group, an oxadiazolyl group, a pyrazolyl group, a triazolyl group, a tetrazolyl group, a pyridyl group, a pyrazyl group, a pyrimidinyl group, a pyridazinyl group, an indolyl group, an isoindolyl group, an indazolyl group, a triazolopyridyl group, a benzimidazolyl group, a benzoxazolyl group, a benzothiazolyl group, a benzothienyl group, a benzofuranyl group, a purinyl group, a quinolyl group, an isoquinolyl group, a quinazolinyl group, and a quinoxalyl group. Specific examples of the partially unsaturated heterocyclic group include a dihydropyranyl group, a dihydrofuranyl group, a dihydrooxadiazolyl group, a methylenedioxyphenyl group, an ethylenedioxyphenyl group, and a dihydrobenzofuranyl group.

[0032]

In the present description, R_a represents a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, $-C(=O)R_x$, $-C(=O)OR_x$, $-C(=O)N(R_x)(R_y)$, $-C(=O)SR_x$, $-C(=S)OR_x$, $-C(=O)ON(R_x)(R_y)$, $-N(R_x)(R_y)$, $-NR_xC(=O)R_y$, $-NR_xS(=O)_2R_y$, $-NR_xC(=O)OR_y$, $-NR_xC(=O)N(R_y)(R_z)$, $-NR_xS(=O)_2N(R_y)(R_z)$, $-N(R_x)-OR_y$, $=NR_x$, $=N-OR_x$, $-OC(=O)R_x$, $-OC(=S)R_x$, $-OC(=O)OR_x$, $-OC(=O)N(R_x)(R_y)$, $-OC(=S)OR_x$, $-SR_x$, $-S(=O)_2R_x$, $-S(=O)_2OR_x$, $-S(=O)_2N(R_x)(R_y)$, an optionally R_b -substituted C_1 - C_6 alkyl group, an optionally R_b -substituted C_2 - C_6 alkenyl group, an optionally R_b -substituted C_2 - C_6 alkynyl group, an optionally R_b -substituted C_1 - C_6 alkoxy group, an optionally R_c -substituted C_3 - C_{10} cycloalkyl group, an optionally R_c -substituted C_6 - C_{14} aromatic hydrocarbon group, or an optionally R_c -substituted 4- to 10-membered saturated or unsaturated heterocyclic group.

When the group represented by R_a is substituted with R_b or R_c , the substituents R_b and R_c may be identical to or different from one another, and the number of the substituents is not particularly limited. The number of the R_b or R_c is preferably from 1 to 5, more preferably from 1 to 3, and particularly preferably from 1 or 2.

[0033]

In the present description, R_b represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1 - C_6 alkoxy group, a di- or mono- (C_1 - C_6

TH0092

alkyl)amino group, or a 4- to 10-membered saturated or unsaturated heterocyclic group.

[0034]

In the present description, R_c represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, an oxo group, an imino group, an N-oxide group, a C_1 - C_6 alkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_1 - C_6 alkoxy group, or a di- or mono- $(C_1$ - C_6 alkyl)amino group.

[0035]

In the present description, R_x , R_y and R_z , which are the same or different, each represent a hydrogen atom, a C_1 - C_6 alkyl group, a C_1 - C_6 haloalkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_3 - C_{10} cycloalkyl group, a C_6 - C_{14} aromatic hydrocarbon group, or a 4- to 10-membered saturated or unsaturated heterocyclic group.

[0036]

In the compound of the present invention of formula (I), R_1 represents an optionally substituted C_4 - C_{10} cycloalkyl group, an optionally substituted C_4 - C_{10} cycloalkenyl group, an optionally substituted C_4 - C_{10} cycloalkynyl group, an optionally substituted C_6 - C_{14} aromatic hydrocarbon group, or an optionally substituted 4- to 10-membered saturated or unsaturated heterocyclic group.

[0037]

A group with which the C₄-C₁₀ cycloalkyl group, C₄-C₁₀ cycloalkenyl group, C₄-C₁₀ cycloalkynyl group, C₆-C₁₄ aromatic hydrocarbon group or 4- to 10-membered saturated or unsaturated heterocyclic group, which is represented by R₁, is optionally substituted is preferably R_a, and examples of the R_a include a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, -C(=O)R_x, -C(=O)OR_x, -C(=O)N(R_x)(R_y), -C(=O)SR_x, -C(=S)OR_x, -C(=O)ON(R_x)(R_y), -N(R_x)(R_y), -NR_xC(=O)R_y, -NR_xS(=O)₂R_y, -NR_xC(=O)OR_y, -NR_xC(=O)N(R_y)(R_z), -NR_xS(=O)₂N(R_y)(R_z), -N(R_x)-OR_y, =NR_x, =N-OR_x, -OC(=O)R_x, -OC(=S)R_x, -OC(=O)OR_x, -OC(=O)N(R_x)(R_y), -OC(=S)OR_x, -SR_x, -S(=O)₂R_x, -S(=O)₂OR_x, -S(=O)₂N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₂-C₆ alkenyl group, an optionally R_b-substituted C₂-C₆ alkynyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, an optionally R_c-substituted C₃-C₁₀ cycloalkyl group, an optionally R_c-substituted C₆-C₁₄ aromatic hydrocarbon group, and an optionally R_c-substituted 4- to 10-membered saturated or unsaturated heterocyclic group.

[0038]

In the "optionally substituted C₄-C₁₀ cycloalkyl group" represented by R₁, the "C₄-C₁₀ cycloalkyl group" is preferably a C₄-C₇ cycloalkyl group, more preferably a C₅-C₇ cycloalkyl group, even more preferably a cyclopentyl group or a cyclohexyl group, and particularly preferably a cyclohexyl group.

In the "optionally substituted C₄-C₁₀ cycloalkyl group" represented by R₁, the substituent is preferably R_a, more preferably a halogen atom or an optionally R_b-substituted C₁-C₆ alkyl group, and particularly preferably a halogen atom or a C₁-C₆ alkyl group. The number of the substituents is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0039]

In the "optionally substituted C₄-C₁₀ cycloalkenyl group" represented by R₁, the "C₄-C₁₀ cycloalkenyl group" is preferably a C₄-C₇ cycloalkenyl group, more preferably a C₅-C₇ cycloalkenyl group, even more preferably a cyclopentenyl group or a cyclohexenyl group, and particularly preferably a cyclohexenyl group.

In the "optionally substituted C₄-C₁₀ cycloalkenyl group" represented by R₁, the substituent is preferably R_a, more preferably a halogen atom, a hydroxy group, an oxo group, or an optionally R_b-substituted C₁-C₆ alkyl group, more preferably a halogen atom, a hydroxy group, an oxo group, or a C₁-C₆ alkyl group, and particularly preferably a hydroxy group or an oxo group. The number of the substituents is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted or 1.

[0040]

In the "optionally substituted C₄-C₁₀ cycloalkynyl group" represented by R₁, the "C₄-C₁₀ cycloalkynyl group" is preferably a C₄-C₇ cycloalkynyl group, more preferably a C₅-C₇ cycloalkynyl group, even more preferably a cyclopentynyl group or a cyclohexynyl group, and particularly preferably a cyclohexynyl group.

In the "optionally substituted C₄-C₁₀ cycloalkynyl group" represented by R₁, the substituent is preferably R_a, more preferably a halogen atom or an optionally R_b-substituted C₁-C₆ alkyl group, and particularly preferably a halogen atom or a C₁-C₆ alkyl group. The number of the substituents is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0041]

In the "optionally substituted C₆-C₁₄ aromatic hydrocarbon group" represented by R₁, the "C₆-C₁₄ aromatic hydrocarbon group" is preferably a C₆-C₁₀ aromatic hydrocarbon group, more preferably a phenyl group or a naphthyl group, and particularly preferably a phenyl group.

In the "optionally substituted C₆-C₁₄ aromatic hydrocarbon group" represented by R₁, the substituent is preferably R_a, more preferably a halogen atom or an optionally R_b-substituted C₁-C₆ alkyl group, and particularly preferably a halogen atom or a C₁-C₆ alkyl group. The number of the substituents is not particularly

TH0092

limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0042]

In the "optionally substituted 4- to 10-membered saturated heterocyclic group" represented by R_1 , the "4- to 10-membered saturated heterocyclic group" is preferably a monocyclic or polycyclic 4- to 10-membered saturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, more preferably a monocyclic 4- to 7-membered saturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, and even more preferably a pyrrolidinyl group, a piperidinyl group, a piperazinyl group, a hexamethyleneimino group, a morpholino group, a thiomorpholino group, a homopiperazinyl group, an oxetanyl group, a tetrahydrofuranyl group, or a tetrahydropyranyl group.

In the "optionally substituted 4- to 10-membered saturated heterocyclic group" represented by R_1 , the substituent is preferably R_a , more preferably a halogen atom or an optionally R_b -substituted C_1 - C_6 alkyl group, and particularly preferably a halogen atom or a C_1 - C_6 alkyl group. The number of the substituents is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0043]

In the "optionally substituted 4- to 10-membered unsaturated heterocyclic group" represented by R₁, the "4- to 10-membered unsaturated heterocyclic group" is preferably a monocyclic or polycyclic 4- to 10-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, more preferably a monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, even more preferably an imidazolyl group, a thienyl group, a furanyl group, a pyrrolyl group, an oxazolyl group, an isoxazolyl group, a thiazolyl group, an isothiazolyl group, a thiadiazolyl group, an oxadiazolyl group, a pyrazolyl group, a triazolyl group, a pyridyl group, a pyrazyl group, a pyrimidinyl group, a pyridazinyl group, a dihydropyranyl group, a dihydrofuranyl group, or a dihydrooxadiazolyl group, further preferably a furanyl group, a 1H-pyrazolyl group, a 4H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,2,3-thiadiazolyl group, a 1,2,4-thiadiazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,3-oxadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a 3,4-dihydro-2H-pyranyl group, a 3,6-dihydro-2H-pyranyl group, a 2,3-dihydrofuranyl group, a 2,5-dihydrofuranyl group, a 2,5-dihydro-1,3,4-oxadiazolyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, still further preferably a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an

oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a 3,6-dihydro-2H-pyranyl group, a 2,5-dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, still further preferably a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, a 1,3,4-thiadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a 3,6-dihydro-2H-pyranyl group, a 2,5-dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, and particularly preferably a furanyl group, a 1H-pyrazolyl group, an oxazolyl group, a 1,3,4-thiadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a 2,5-dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group.

In the "optionally substituted 4- to 10-membered unsaturated heterocyclic group" represented by R_1 , the substituent is preferably R_a , more preferably a halogen atom, an amino group, a hydroxy group, an oxo group, an N-oxide group, $-C(=O)R_x$, an optionally R_b -substituted C_1-C_6 alkyl group, an optionally R_b -substituted C_1-C_6 alkoxy group, or an optionally R_c -substituted 4- to 10-membered saturated heterocyclic group, even more preferably a halogen atom; an amino group; an oxo group; an N-oxide group; a formyl group; a C_1-C_6 alkyl group optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono- $(C_1-C_6$ alkyl)amino group; a C_1-C_6 alkoxy group optionally

substituted with a halogen atom; or a 4- to 10-membered saturated heterocyclic group, and particularly preferably a halogen atom; an oxo group; a C₁-C₆ alkyl group optionally substituted with a hydroxy group; or a C₁-C₆ alkoxy group. The number of the substituents is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted, or 1 or 2.

[0044]

The R₁ in the present invention is preferably an optionally substituted C₄-C₁₀ cycloalkenyl group, an optionally substituted C₆-C₁₄ aromatic hydrocarbon group, or an optionally substituted monocyclic or polycyclic 4- to 10-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

more preferably, an optionally R_a-substituted C₄-C₁₀ cycloalkenyl group, an optionally R_a-substituted C₆-C₁₄ aromatic hydrocarbon group, or an optionally R_a-substituted monocyclic or polycyclic 4- to 10-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

even more preferably, an optionally R_a-substituted C₅-C₇ cycloalkenyl group, an optionally R_a-substituted C₆-C₁₀ aromatic hydrocarbon group, or an optionally R_a-substituted monocyclic 4- to 7-membered unsaturated heterocyclic group

having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

further preferably, a cyclopentenyl group, a cyclohexenyl group, a phenyl group, a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a dihydropyranyl group, a dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group (where the cycloalkenyl group, aromatic hydrocarbon group, and unsaturated heterocyclic group are optionally substituted with R_a),

further preferably, a cyclopentenyl group, a cyclohexenyl group, a phenyl group, a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a dihydropyranyl group, a dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group (where the cycloalkenyl group, aromatic hydrocarbon group, and unsaturated heterocyclic group are optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an oxo group, an N-oxide group, a formyl group, a C₁-C₆ alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group), a C₁-C₆ alkoxy

group (which is optionally substituted with a halogen atom), and 4- to 10-membered saturated heterocyclic group),

still further preferably, a cyclopentenyl group; a cyclohexenyl group; a phenyl group; and a furanyl group optionally substituted with a group selected from the group consisting of a formyl group and a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group); a 1H-pyrazolyl group optionally substituted with a group selected from the group consisting of a C₁-C₆ alkyl group and a 4- to 10-membered saturated heterocyclic group; a thiazolyl group; an oxazolyl group; an isoxazolyl group; a 1,3,4-thiadiazolyl group; a 1,2,4-oxadiazolyl group; a 1,3,4-oxadiazolyl group optionally substituted with a C₁-C₆ alkyl group; a pyridyl group optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an N-oxide group, a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group), and a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom); a dihydropyranyl group; a dihydrofuranyl group; and a 4,5-dihydro-1,3,4-oxadiazolyl group optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group, and

particularly preferably, a phenyl group; a furanyl group optionally substituted with a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group); a

1H-pyrazolyl group; an oxazolyl group; a 1,3,4-thiadiazolyl group; a 1,3,4-oxadiazolyl group; a pyridyl group optionally substituted with a group selected from the group consisting of a halogen atom and a C₁-C₆ alkoxy group; a dihydrofuranyl group; and a 4,5-dihydro-1,3,4-oxadiazolyl group optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group.

[0045]

In the compound of the present invention of formula (I), R₂ represents a hydrogen atom, a halogen atom, a hydroxy group, a cyano group, a nitro group, -C(=O)R_x, -C(=O)OR_x, -C(=O)N(R_x)(R_y), -N(R_x)(R_y), -NR_xC(=O)R_y, -NR_xS(=O)₂R_y, -NR_xC(=O)OR_y, -NR_xC(=O)N(R_y)(R_z), -NR_xS(=O)₂N(R_y)(R_z), -OC(=O)R_x, -OC(=O)OR_x, -OC(=O)N(R_x)(R_y), -SR_x, -S(=O)₂R_x, -S(=O)₂OR_x, an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₂-C₆ alkenyl group, an optionally R_b-substituted C₂-C₆ alkynyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, an optionally R_c-substituted C₃-C₁₀ cycloalkyl group, an optionally R_c-substituted C₆-C₁₄ aromatic hydrocarbon group, or an optionally R_c-substituted 4- to 10-membered saturated or unsaturated heterocyclic group.

[0046]

The "-C(=O)R_x" represented by R₂ is preferably a formyl group or a (C₁-C₆ alkyl)carbonyl group, more

preferably a formyl group, an acetyl group, or a propionyl group, and particularly preferably a formyl group.

The " $-C(=O)OR_x$ " represented by R_2 is preferably a carboxy group or a (C_1 - C_6 alkoxy)carbonyl group, more preferably a methoxycarbonyl group or an ethoxycarbonyl group, and particularly preferably a methoxycarbonyl group.

The " $-C(=O)N(R_x)(R_y)$ " represented by R_2 is preferably a carbamoyl group ($-C(=O)NH_2$) or a di- or mono- (C_1 - C_6 alkyl)carbamoyl group, and particularly preferably a carbamoyl group, a methylcarbamoyl group, or a dimethylcarbamoyl group.

The " $-N(R_x)(R_y)$ " represented by R_2 is preferably an amino group or a di- or mono- (C_1 - C_6 alkyl)amino group, more preferably an amino group, a methylamino group, or a dimethylamino group, and particularly preferably an amino group.

The " $-NR_xC(=O)R_y$ " represented by R_2 is preferably a formamide group or a (C_1 - C_6 alkyl)carbonylamino group, more preferably a formamide group, an acetamide group, or a propionamide group, and particularly preferably a formamide group.

The " $-NR_xS(=O)_2R_y$ " represented by R_2 is preferably a hydrosulfonylamino group ($-NH-S(=O)_2H$) or a (C_1 - C_6 alkyl)sulfonamide group, more preferably a hydrosulfonylamino group, a methylsulfonamide group, or an ethylsulfonamide group, and particularly preferably a hydrosulfonylamino group.

The " $\text{-NR}_x\text{C(=O)OR}_y$ " represented by R_2 is preferably a carboxyamino group (-NH-C(=O)OH) or a ($\text{C}_1\text{-C}_6$ alkoxy)carbonylamino group, more preferably a carboxyamino group, a methoxycarbonylamino group, or an ethylcarbonylamino group, and particularly preferably a carboxyamino group.

The " $\text{-NR}_x\text{C(=O)N(R}_y\text{)(R}_z\text{)}$ " represented by R_2 is preferably a ureido group (-NH-C(=O)NH_2) or a di- or mono- ($\text{C}_1\text{-C}_6$ alkyl)ureido group, more preferably a ureido group, a 3-methylureido group, or a 3,3-dimethylureido group, and particularly preferably a ureido group.

The " $\text{-NR}_x\text{S(=O)}_2\text{N(R}_y\text{)(R}_z\text{)}$ " represented by R_2 is preferably a sulfamoylamino group ($\text{-NH-S(=O)}_2\text{NH}_2$) or a di- or mono- ($\text{C}_1\text{-C}_6$ alkyl)sulfamoylamino group, more preferably a sulfamoylamino group, an N-methylsulfamoylamino group, or an N,N-dimethylsulfamoylamino group, and particularly preferably a sulfamoylamino group.

The " -OC(=O)R_x " represented by R_2 is preferably a formyloxy group, or a ($\text{C}_1\text{-C}_6$ alkyl)carbonyloxy group, more preferably a formyloxy group, an acetoxy group, or a propionyloxy group, and particularly preferably a formyloxy group.

The " -OC(=O)OR_x " represented by R_2 is preferably a carboxyoxy group or a ($\text{C}_1\text{-C}_6$ alkoxy)carbonyloxy group, more preferably a carboxyoxy group, a methoxycarbonyloxy group, or an ethoxycarbonyloxy group, and particularly preferably a carboxyoxy group.

The " $-\text{OC}(=\text{O})\text{N}(\text{R}_x)(\text{R}_y)$ " represented by R_2 is preferably a carbamoyloxy group ($-\text{OC}(=\text{O})\text{NH}_2$) or a di- or mono- $(\text{C}_1\text{-C}_6\text{ alkyl})$ carbamoyloxy group, more preferably a carbamoyloxy group, a methylcarbamoyloxy group, or a dimethylcarbamoyloxy group, and particularly preferably a carbamoyloxy group.

The " $-\text{SR}_x$ " represented by R_2 is preferably a mercapto group or a $(\text{C}_1\text{-C}_6\text{ alkyl})$ thio group, more preferably a mercapto group, a methylthio group, or an ethylthio group, and particularly preferably a mercapto group.

The " $-\text{S}(=\text{O})_2\text{R}_x$ " represented by R_2 is preferably a $(\text{C}_1\text{-C}_6\text{ alkyl})$ sulfonyl group, more preferably a methylsulfonyl group or an ethylsulfonyl group, and particularly preferably a methylsulfonyl group.

The " $-\text{S}(=\text{O})_2\text{OR}_x$ " represented by R_2 is preferably a sulfo group ($-\text{S}(=\text{O})_2\text{OH}$) or a $(\text{C}_1\text{-C}_6\text{ alkoxy})$ sulfonyl group, more preferably a sulfo group, a methoxysulfonyl group, or an ethoxysulfonyl group, and particularly preferably a sulfo group.

In the "optionally R_b -substituted $\text{C}_1\text{-C}_6$ alkyl group" represented by R_2 , the " $\text{C}_1\text{-C}_6$ alkyl group" is preferably a $\text{C}_1\text{-C}_4$ alkyl group, more preferably a methyl group or an ethyl group, and particularly preferably a methyl group.

In the "optionally R_b -substituted $\text{C}_1\text{-C}_6$ alkyl group" represented by R_2 , the R_b is preferably a hydroxy group, a $\text{C}_1\text{-C}_6$ alkoxy group, a di- or mono- $(\text{C}_1\text{-C}_6\text{ alkyl})$ amino group, or a 4- to 10-membered saturated heterocyclic group, more

TH0092

preferably a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, or a monocyclic 5- or 6-membered saturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N and O, and particularly preferably a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, or a morpholino group. The number of the R_b is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably 1.

[0047]

In the "optionally R_b-substituted C₂-C₆ alkenyl group" represented by R₂, the "C₂-C₆ alkenyl group" is preferably a C₂-C₄ alkenyl group, and particularly preferably a vinyl group.

In the "optionally R_b-substituted C₂-C₆ alkenyl group" represented by R₂, the R_b is preferably a halogen atom. The number of the R_b is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0048]

In the "optionally R_b-substituted C₂-C₆ alkynyl group" represented by R₂, the "C₂-C₆ alkynyl group" is preferably a C₂-C₄ alkynyl group, and particularly preferably an ethynyl group.

In the "optionally R_b-substituted C₂-C₆ alkynyl group" represented by R₂, the R_b is preferably a halogen atom. The number of the R_b is not particularly limited, and it is

TH0092

preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0049]

In the "optionally R_b -substituted C_1 - C_6 alkoxy group" represented by R_2 , the " C_1 - C_6 alkoxy group" is preferably a C_1 - C_4 alkoxy group, more preferably a methoxy group or an ethoxy group, and particularly preferably a methoxy group.

In the "optionally R_b -substituted C_1 - C_6 alkoxy group" represented by R_2 , the R_b is preferably a halogen atom. The number of the R_b is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0050]

In the "optionally R_c -substituted C_3 - C_{10} cycloalkyl group" represented by R_2 , the " C_3 - C_{10} cycloalkyl group" is preferably a C_4 - C_7 cycloalkyl group, more preferably a C_5 - C_7 cycloalkyl group, even more preferably a cyclopentyl group or a cyclohexyl group, and particularly preferably a cyclohexyl group.

In the "optionally R_c -substituted C_3 - C_{10} cycloalkyl group" represented by R_2 , the R_c is preferably a halogen atom. The number of the R_c is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0051]

In the "optionally R_c -substituted C_6 - C_{14} aromatic hydrocarbon group" represented by R_2 , the " C_6 - C_{14} aromatic

hydrocarbon group" is preferably a C₆-C₁₀ aromatic hydrocarbon group, more preferably a phenyl group or a naphthyl group, and particularly preferably a phenyl group.

In the "optionally R_c-substituted C₆-C₁₄ aromatic hydrocarbon group" represented by R₂, the R_c is preferably a halogen atom. The number of the R_c is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0052]

In the "optionally R_c-substituted 4- to 10-membered saturated heterocyclic group" represented by R₂, the "4- to 10-membered saturated heterocyclic group" is preferably a monocyclic or polycyclic 4- to 10-membered saturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, more preferably a monocyclic 4- to 7-membered saturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N and O, even more preferably a pyrrolidinyl group, a piperidinyl group, a piperazinyl group, a hexamethyleneimino group, a morpholino group, a homopiperazinyl group, an oxetanyl group, a tetrahydrofuranyl group, or a tetrahydropyranyl group, and particularly preferably a morpholino group.

In the "optionally R_c-substituted 4- to 10-membered saturated heterocyclic group" represented by R₂, the R_c is preferably a halogen atom. The number of the R_c is not particularly limited, and it is preferably 0, namely, not-

substituted, or 1 to 3, and particularly preferably not-substituted.

[0053]

In the "optionally R_c -substituted 4- to 10-membered unsaturated heterocyclic group" represented by R_2 , the "4- to 10-membered unsaturated heterocyclic group" is preferably a monocyclic or polycyclic 4- to 10-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, more preferably a monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O, even more preferably a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, further preferably an imidazolyl group, a pyrazolyl group, a triazolyl group, a pyridyl group, a pyrazyl group, a pyrimidinyl group, or a pyridazinyl group, still further preferably a pyrazolyl group, and particularly preferably a 1H-pyrazolyl group.

In the "optionally R_c -substituted 4- to 10-membered unsaturated heterocyclic group" represented by R_2 , the R_c is preferably a halogen atom or a C_1 - C_6 alkyl group, and particularly preferably a C_1 - C_6 alkyl group. The number of the R_c is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted or 1.

[0054]

The R_2 in the present invention is preferably a hydrogen atom, a cyano group, $-C(=O)OR_x$, $-C(=O)N(R_x)(R_y)$, an optionally R_b -substituted C_1-C_6 alkyl group, an optionally R_b -substituted C_1-C_6 alkoxy group, or an optionally R_c -substituted monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

more preferably, a hydrogen atom; a cyano group; a $(C_1-C_6$ alkoxy)carbonyl group; a carbamoyl group; a di- or mono- $(C_1-C_6$ alkyl)carbamoyl group; a C_1-C_6 alkyl group optionally substituted with a group selected from the group consisting of a hydroxy group, a C_1-C_6 alkoxy group, a di- or mono- $(C_1-C_6$ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C_1-C_6 alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C_1-C_6 alkyl group,

even more preferably, a hydrogen atom; a cyano group; a C_1-C_6 alkoxy group; or a pyrazolyl group optionally substituted with a C_1-C_6 alkyl group, and

particularly preferably, a hydrogen atom.

[0055]

In the compound of the present invention of formula (I), R_3 represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1-C_6 alkyl group, a C_2-C_6 alkenyl group, a C_2-C_6 alkynyl group, or a C_1-C_6 alkoxy group.

[0056]

The R_3 in the present invention is preferably a halogen atom or a C_1 - C_6 alkyl group, and particularly preferably a halogen atom.

The number of the R_3 in the present invention, which is m , is preferably 0 to 2, more preferably 0 or 1, and particularly preferably 0, namely, not-substituted.

[0057]

In the compound of the present invention of formula (I), R_4 represents an optionally R_b -substituted C_2 - C_6 alkenyl group or an optionally R_b -substituted C_2 - C_6 alkynyl group.

In the "optionally R_b -substituted C_2 - C_6 alkenyl group" represented by R_4 , the " C_2 - C_6 alkenyl group" is preferably a C_2 - C_4 alkenyl group, more preferably a vinyl group, an allyl group, a 1-propenyl group, a 1-methylvinyl group, a 1-butenyl group, a 2-butenyl group, or a 3-butenyl group, even more preferably a vinyl group or a 1-propenyl group, and particularly preferably a vinyl group.

In the "optionally R_b -substituted C_2 - C_6 alkenyl group" represented by R_4 , the R_b is preferably a halogen atom, an amino group, a C_1 - C_6 alkoxy group, or a di- or mono- (C_1 - C_6 alkyl)amino group, more preferably a halogen atom or a C_1 - C_6 alkoxy group, and particularly preferably a halogen atom. The number of the R_b is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0058]

The "optionally R_b -substituted C_2-C_6 alkynyl group" represented by R_4 is preferably a C_2-C_4 alkynyl group, more preferably an ethynyl group, a 1-propynyl group, or a 1-butynyl group, even more preferably an ethynyl group or a 1-propynyl group, and particularly preferably an ethynyl group.

In the "optionally R_b -substituted C_2-C_6 alkynyl group" represented by R_4 , the R_b is preferably a halogen atom, an amino group, a C_1-C_6 alkoxy group, or a di- or mono- (C_1-C_6 alkyl)amino group, more preferably a halogen atom or a C_1-C_6 alkoxy group, and particularly preferably a halogen atom. The number of the R_b is not particularly limited, and it is preferably 0, namely, not-substituted, or 1 to 3, and particularly preferably not-substituted.

[0059]

The R_4 in the present invention is preferably a C_2-C_6 alkenyl group or a C_2-C_6 alkynyl group, more preferably a C_2-C_4 alkenyl group or a C_2-C_4 alkynyl group, even more preferably a vinyl group, a 1-propenyl group, an ethynyl group, or a 1-propynyl group, further preferably a vinyl group or an ethynyl group, and particularly preferably a vinyl group.

[0060]

The n in the present invention is preferably 0 or 1, and particularly preferably 1.

[0061]

TH0092

In the compound of the present invention of formula (I), the following structure

is preferably the following structures (1) to (7).

[0062]

[0063]

Among these structures, the structures (1), (3), (5) and (6) are more preferable, the structures (1) and (3) are even more preferable, and the structure (3) is particularly preferable.

[0064]

A preferred compound of the present invention is a compound in which R_1 represents an optionally R_a -substituted C_4 - C_{10} cycloalkenyl group, an optionally R_a -

substituted C₆-C₁₄ aromatic hydrocarbon group, or an optionally R_a-substituted monocyclic or polycyclic 4- to 10-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

R₂ represents a hydrogen atom, a cyano group, -C(=O)OR_x, -C(=O)N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, or an optionally R_c-substituted monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group or a C₂-C₆ alkynyl group,

R_a represents a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, -C(=O)R_x, -C(=O)OR_x, -C(=O)N(R_x)(R_y), -C(=O)SR_x, -C(=S)OR_x, -C(=O)ON(R_x)(R_y), -N(R_x)(R_y), -NR_xC(=O)R_y, -NR_xS(=O)₂R_y, -NR_xC(=O)OR_y, -NR_xC(=O)N(R_y)(R_z), -NR_xS(=O)₂N(R_y)(R_z), -N(R_x)OR_y, =NR_x, =N-OR_x, -OC(=O)R_x, -OC(=S)R_x, -OC(=O)OR_x, -OC(=O)N(R_x)(R_y), -OC(=S)OR_x, -SR_x, -S(=O)₂R_x, -S(=O)₂OR_x, -S(=O)₂N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₂-C₆ alkenyl group, an optionally R_b-substituted C₂-C₆ alkynyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, an optionally R_c-substituted C₃-C₁₀ cycloalkyl group, an optionally R_c-substituted C₆-C₁₄ aromatic hydrocarbon group, or an

optionally R_c -substituted 4- to 10-membered saturated or unsaturated heterocyclic group,

R_b represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1 - C_6 alkoxy group, a di- or mono- $(C_1$ - C_6 alkyl)amino group, or a 4- to 10-membered saturated or unsaturated heterocyclic group,

R_c represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, an oxo group, an imino group, an N-oxide group, a C_1 - C_6 alkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_1 - C_6 alkoxy group or a di- or mono- $(C_1$ - C_6 alkyl)amino group, and

R_x , R_y and R_z , which are the same or different, each represent a hydrogen atom, a C_1 - C_6 alkyl group, a C_1 - C_6 haloalkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_3 - C_{10} cycloalkyl group, a C_6 - C_{14} aromatic hydrocarbon group, or a 4- to 10-membered saturated or unsaturated heterocyclic group.

[0065]

The compound of the present invention is more preferably a compound in which R_1 represents an optionally R_a -substituted C_5 - C_7 cycloalkenyl group, an optionally R_a -substituted C_6 - C_{10} aromatic hydrocarbon group, or an optionally R_a -substituted monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O,

R_2 represents a hydrogen atom; a cyano group; a $(C_1$ - C_6 alkoxy)carbonyl group; a carbamoyl group; a di- or mono-

TH0092

(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-C₆ alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C₁-C₆ alkyl group,

m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

R_a represents a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, -C(=O)R_x, -C(=O)OR_x, -C(=O)N(R_x)(R_y), -C(=O)SR_x, -C(=S)OR_x, -C(=O)ON(R_x)(R_y), -N(R_x)(R_y), -NR_xC(=O)R_y, -NR_xS(=O)₂R_y, -NR_xC(=O)OR_y, -NR_xC(=O)N(R_y)(R_z), -NR_xS(=O)₂N(R_y)(R_z), -N(R_x)OR_y, =NR_x, =N-OR_x, -OC(=O)R_x, -OC(=S)R_x, -OC(=O)OR_x, -

$\text{OC}(=\text{O})\text{N}(\text{R}_x)(\text{R}_y)$, $-\text{OC}(=\text{S})\text{OR}_x$, $-\text{SR}_x$, $-\text{S}(=\text{O})_2\text{R}_x$, $-\text{S}(=\text{O})_2\text{OR}_x$, $-\text{S}(=\text{O})_2\text{N}(\text{R}_x)(\text{R}_y)$, an optionally R_b -substituted C_1 - C_6 alkyl group, an optionally R_b -substituted C_2 - C_6 alkenyl group, an optionally R_b -substituted C_2 - C_6 alkynyl group, an optionally R_b -substituted C_1 - C_6 alkoxy group, an optionally R_c -substituted C_3 - C_{10} cycloalkyl group, an optionally R_c -substituted C_6 - C_{14} aromatic hydrocarbon group, or an optionally R_c -substituted 4- to 10-membered saturated or unsaturated heterocyclic group,

R_b represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1 - C_6 alkoxy group, a di- or mono- $(\text{C}_1$ - C_6 alkyl)amino group, or a 4- to 10-membered saturated or unsaturated heterocyclic group,

R_c represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, an oxo group, an imino group, an N-oxide group, a C_1 - C_6 alkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_1 - C_6 alkoxy group or a di- or mono- $(\text{C}_1$ - C_6 alkyl)amino group, and

R_x , R_y and R_z , which are the same or different, each represent a hydrogen atom, a C_1 - C_6 alkyl group, a C_1 - C_6 haloalkyl group, a C_2 - C_6 alkenyl group, a C_2 - C_6 alkynyl group, a C_3 - C_{10} cycloalkyl group, a C_6 - C_{14} aromatic hydrocarbon group, or a 4- to 10-membered saturated or unsaturated heterocyclic group.

[0066]

The compound of the present invention is even more preferably a compound in which R_1 represents an optionally

R_a-substituted cyclopentenyl group, cyclohexenyl group, phenyl group, furanyl group, 1H-pyrazolyl group, thiazolyl group, oxazolyl group, isoxazolyl group, 1,3,4-thiadiazolyl group, 1,2,4-oxadiazolyl group, 1,3,4-oxadiazolyl group, pyridyl group, dihydropyranyl group, dihydrofuranyl group, or 4,5-dihydro-1,3,4-oxadiazolyl group,

R₂ represents a hydrogen atom; a cyano group; a (C₁-C₆ alkoxy)carbonyl group; a carbamoyl group; a di- or mono-(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-C₆ alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C₁-C₆ alkyl group,

m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

TH0092

R_a represents a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, -
 $C(=O)R_x$, $-C(=O)OR_x$, $-C(=O)N(R_x)(R_y)$, $-C(=O)SR_x$, $-C(=S)OR_x$, -
 $C(=O)ON(R_x)(R_y)$, $-N(R_x)(R_y)$, $-NR_xC(=O)R_y$, $-NR_xS(=O)_2R_y$, -
 $NR_xC(=O)OR_y$, $-NR_xC(=O)N(R_y)(R_z)$, $-NR_xS(=O)_2N(R_y)(R_z)$, $-N(R_x)-$
 OR_y , $=NR_x$, $=N-OR_x$, $-OC(=O)R_x$, $-OC(=S)R_x$, $-OC(=O)OR_x$, -
 $OC(=O)N(R_x)(R_y)$, $-OC(=S)OR_x$, $-SR_x$, $-S(=O)_2R_x$, $-S(=O)_2OR_x$, -
 $S(=O)_2N(R_x)(R_y)$, an optionally R_b -substituted C_1 - C_6 alkyl
group, an optionally R_b -substituted C_2 - C_6 alkenyl group, an
optionally R_b -substituted C_2 - C_6 alkynyl group, an
optionally R_b -substituted C_1 - C_6 alkoxy group, an optionally
 R_c -substituted C_3 - C_{10} cycloalkyl group, an optionally R_c -
substituted C_6 - C_{14} aromatic hydrocarbon group, or an
optionally R_c -substituted 4- to 10-membered saturated or
unsaturated heterocyclic group,

R_b represents a halogen atom, an amino group, a
hydroxy group, a cyano group, a nitro group, a C_1 - C_6 alkoxy
group, a di- or mono- $(C_1$ - C_6 alkyl)amino group, or a 4- to
10-membered saturated or unsaturated heterocyclic group,

R_c represents a halogen atom, an amino group, a
hydroxy group, a cyano group, a nitro group, an oxo group,
an imino group, an N-oxide group, a C_1 - C_6 alkyl group, a

C₂-C₆ alkenyl group, a C₂-C₆ alkynyl group, a C₁-C₆ alkoxy group or a di- or mono-(C₁-C₆ alkyl)amino group, and

R_x, R_y and R_z, which are the same or different, each represent a hydrogen atom, a C₁-C₆ alkyl group, a C₁-C₆ haloalkyl group, a C₂-C₆ alkenyl group, a C₂-C₆ alkynyl group, a C₃-C₁₀ cycloalkyl group, a C₆-C₁₄ aromatic hydrocarbon group, or a 4- to 10-membered saturated or unsaturated heterocyclic group.

[0067]

The compound of the present invention is further preferably a compound in which R₁ represents a cyclopentenyl group, a cyclohexenyl group, a phenyl group, a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl group, a pyridyl group, a dihydropyranyl group, a dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, which is optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an oxo group, an N-oxide group, a formyl group, a C₁-C₆ alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group), a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom), and a 4- to 10-membered saturated heterocyclic group,

TH0092

R_2 represents a hydrogen atom; a cyano group; a $(C_1-C_6$ alkoxy)carbonyl group; a carbamoyl group; a di- or mono- $(C_1-C_6$ alkyl)carbamoyl group; a C_1-C_6 alkyl group optionally substituted with a group selected from the group consisting of a hydroxy group, a C_1-C_6 alkoxy group, a di- or mono- $(C_1-C_6$ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C_1-C_6 alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C_1-C_6 alkyl group,

m represents 0, n represents 0 or 1, R_4 represents a C_2-C_6 alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

[0068]

The compound of the present invention is particularly preferably a compound in which R_1 represents a

cyclopentenyl group; a cyclohexenyl group; a phenyl group; a furanyl group optionally substituted with a group selected from the group consisting of a formyl group and a C₁-C₆ alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group); a 1H-pyrazolyl group optionally substituted with a group selected from the group consisting of a C₁-C₆ alkyl group and a 4- to 10-membered saturated heterocyclic group; a thiazolyl group; an oxazolyl group; an isoxazolyl group; an 1,3,4-thiadiazolyl group; an 1,2,4-oxadiazolyl group; a 1,3,4-oxadiazolyl group optionally substituted with a C₁-C₆ alkyl group; a pyridyl group optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an N-oxide group, a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group) and a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom); a dihydropyranyl group; a dihydrofuranyl group; or a 4,5-dihydro-1,3,4-oxadiazolyl group optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group,

R₂ represents a hydrogen atom; a cyano group; a (C₁-C₆ alkoxy)carbonyl group; a carbamoyl group; a di- or mono-(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di-

or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-C₆ alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C₁-C₆ alkyl group,

m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

[0069]

Specific examples of the preferred compound of the present invention include:

- (1) N-(3-(3-phenyl-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 1),
- (2) N-(3-(3-(1H-pyrazol-4-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 3),
- (3) N-(3-(3-(2-methoxypyridin-3-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 6),

- (4) N-(3-(3-(furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 12),
- (5) N-(3-(3-(4-(hydroxymethyl)furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 14),
- (6) N-(3-(3-(2,5-dihydrofuran-3-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 34),
- (7) N-(3-(3-(oxazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 48),
- (8) N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 49),
- (9) (S)-N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 55),
- (10) N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclopent-3-en-1-yl)acrylamide (Compound 57), and
- (11) (S)-N-(3-(3-(isoxazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 59).

[0070]

Next, methods for producing the compound according to the present invention will be described.

The compound of the present invention of formula (I) can be produced by, for example, the following Production Methods A to E.

[0071]

<Production Method A>

[0072]

[0073]

where L_1 , L_2 , and L_3 , which are the same or different, each represent a leaving group, P_1 and P_2 each represent a protective group, and other symbols have the same meanings as described above.

[0074]

(Step 1)

This step is a method of allowing the compound of formula 1 to react with arylboronic acid or arylboronic acid ester, or with unsaturated hetero ring-boronic acid or unsaturated hetero ring-boronic acid ester, each of which is a commercially available product or can be produced by a known method, according to a coupling reaction, when L_2 in the compound of formula 1 has a leaving group such as halogen, so as to obtain the compound of formula 2.

[0075]

This step can be generally carried out according to a known method (for example, Chemical Reviews, Vol. 95, p. 2457, 1995), and it can be carried out, for example, in the presence of a transition metal catalyst and a base, in a solvent which does not adversely affect the reaction.

[0076]

The arylboronic acid or arylboronic acid ester, or unsaturated hetero ring-boronic acid or unsaturated hetero ring-boronic acid ester can be used in an amount of from 1 to 10 equivalents, and preferably from 1 to 3 equivalents, based on the amount of the compound of formula 1 (1 mole).

[0077]

Examples of the transition metal catalyst used herein include palladium catalysts (e.g., palladium acetate, palladium chloride, and tetrakis(triphenylphosphine)palladium) and nickel catalysts (e.g., nickel chloride). As necessary, a ligand

(e.g., triphenylphosphine and tri-tert-butylphosphine) is added to the catalyst, and a metal oxide (e.g., copper oxide and silver oxide) and the like may be used as a co-catalyst. The amount of the transition metal catalyst to be used varies depending on the type of the catalyst, and the transition metal catalyst is used in an amount of generally from about 0.0001 to 1 mole, and preferably from about 0.01 to 0.5 moles, based on the amount of the compound of formula 1 (1 mole). The ligand is used in an amount of generally from about 0.0001 to 4 moles, and preferably from about 0.01 to 2 moles, based on the amount of the compound of formula 1 (1 mole), and the co-catalyst is used in an amount of generally from about 0.0001 to 4 moles, and preferably from about 0.01 to 2 moles, based on the amount of the compound of formula 1 (1 mole).

[0078]

Examples of the base include organic amines (e.g., trimethylamine, triethylamine, diisopropylethylamine, N-methylmorpholine, 1,8-diazabicyclo[5,4,0]undec-7-ene, pyridine, and N,N-dimethylaniline), alkaline metal salts (e.g., sodium hydrogen carbonate, potassium hydrogen carbonate, sodium carbonate, potassium carbonate, cesium carbonate, sodium phosphate, potassium phosphate, sodium hydroxide, and potassium hydroxide), metal hydrides (e.g., potassium hydride and sodium hydride), alkaline metal alkoxides (e.g., sodium methoxide, sodium ethoxide, sodium tert-butoxide, and potassium tert-butoxide), and alkaline

TH0092

metal disilazides (e.g., lithium disilazide, sodium disilazide, and potassium disilazide). The base is used in an amount of generally from 0.1 to 10 moles, and preferably from about 1 to 5 moles, based on the amount of the compound of formula 1 (1 mole).

[0079]

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., chloroform and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), alcohols (e.g., methanol and ethanol), aprotic polar solvents (e.g., dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), water, and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 150°C.

Thus obtained compound of formula 2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0080]

(Step 2)

This step is a method of allowing the compound of formula 2 to react with the compound of formula 3, which

is a commercially available product or can be produced by a known method, according to a coupling reaction, so as to obtain the compound of formula 4. This step can be carried out by the same method as that in Step 1.

[0081]

(Step 3)

This step is a method of halogenating the compound of formula 4 to obtain the compound of formula 5. The halogenation can be carried out, for example, by a method of using fluorine, chlorine, bromine, iodine, etc., or a method of using N-chlorosuccinimide, N-bromosuccinimide or N-iodosuccinimide. In this reaction, a method of using N-chlorosuccinimide, N-bromosuccinimide, N-iodosuccinimide, etc. is preferable.

[0082]

Such N-chlorosuccinimide, N-bromosuccinimide, N-iodosuccinimide, etc. can be used in an amount of from 1 to 10 equivalents, and preferably from 1 to 3 equivalents, based on the amount of the compound of formula 4 (1 mole).

[0083]

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., chloroform and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), alcohols (e.g., methanol and ethanol), aprotic polar solvents (e.g.,

TH0092

dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), water, and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 5 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0084]

(Step 4)

This step is a method of introducing a protective group into the compound of formula 5 to obtain the compound of formula 6. The protection can be carried out by a generally known method, for example, the method described in Protective Groups in Organic Synthesis, T. W. Greene, John Wiley & Sons (1981), or a method equivalent thereto. In this reaction, a toluenesulfonate group, a benzenesulfonate group, a methanesulfonate group, a 2-(trimethylsilyl)ethoxymethyl group, a methoxymethyl group, a trityl group, and the like are preferable.

[0085]

Examples of the protective group agent used in this reaction include toluenesulfonyl chloride, benzenesulfonyl chloride, methanesulfonyl chloride, 2-(chloromethoxy)ethyltrimethylsilane,

TH0092

chloro(methoxy)methane, and trityl chloride. Such a protective group agent is used in an amount of generally from about 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 5 (1 mole).

[0086]

Examples of the base include organic amines (e.g., trimethylamine, triethylamine, diisopropylethylamine, N-methylmorpholine, 1,8-diazabicyclo[5,4,0]undec-7-ene, pyridine, and N,N-dimethylaniline), alkaline metal salts (e.g., sodium hydrogen carbonate, potassium hydrogen carbonate, sodium carbonate, potassium carbonate, cesium carbonate, sodium phosphate, potassium phosphate, sodium hydroxide, and potassium hydroxide), metal hydrides (e.g., potassium hydride and sodium hydride), alkaline metal alkoxides (e.g., sodium methoxide, sodium ethoxide, sodium tert-butoxide, and potassium tert-butoxide), and alkaline metal disilazides (e.g., lithium disilazide, sodium disilazide, and potassium disilazide). The base is used in an amount of generally from 0.1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 5 (1 mole).

[0087]

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., chloroform and

1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), alcohols (e.g., methanol and ethanol), aprotic polar solvents (e.g., dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), water, and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 6 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0088]

(Step 5)

This step is a method of allowing the compound of formula 6 to react with arylboronic acid or arylboronic acid ester, or with unsaturated hetero ring-boronic acid or unsaturated hetero ring-boronic acid ester, each of which is a commercially available product or can be produced by a known method, according to a coupling reaction, or of allowing the compound of formula 6 to react with an organic tin compound which is a commercially available product or can be produced by a known method, according to a coupling reaction, so as to obtain the compound of formula 7.

This step can be carried out by the same method as that in Step 1.

[0089]

(Step 6)

This step is a method of deprotecting the protective group P_2 of the compound of formula 7 to obtain the compound of formula 8. The deprotection can be carried out by a generally known method, for example, the method described in Protective Groups in Organic Synthesis, T. W. Greene, John Wiley & Sons (1981), or a method equivalent thereto.

[0090]

Examples of the protective group include a para-toluenesulfonic acid group and a trimethylsilylethoxymethyl group. When a para-toluenesulfonic acid group is used as a protective group, for example, lithium hydroxide, sodium hydroxide, potassium hydroxide, tetrabutylammonium fluoride, etc. are preferably used. Such a protective group is used in an amount of generally from 0.5 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 7 (1 mole).

Moreover, when the protective group P_2 is a trimethylsilylethoxymethyl group or a trityl group, lithium hydroxide, sodium hydroxide, potassium hydroxide, tetrabutylammonium fluoride, acid (e.g., hydrochloric acid, trifluoroacetic acid, acetic acid, and sulfuric acid) and

the like are preferably used. Such a protective group is used in an amount of generally from 0.5 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 7 (1 mole).

[0091]

The solvent used in the reaction is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent used herein include alcohols (e.g., methanol), hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., methylene chloride, chloroform, and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), aprotic polar solvents (e.g., N,N-dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 8 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0092]

(Step 7)

This step is a method of deprotecting the protective group for the amino group of the compound of formula 8 to

obtain the compound of formula 9. The deprotection can be carried out by a generally known method, for example, the method described in Protective Groups in Organic Synthesis, T. W. Greene, John Wiley & Sons (1981), or a method equivalent thereto.

[0093]

An example of such a protective group is tert-butyloxycarbonyl. When a tert-butyloxycarbonyl group is used as a protective group, for example, the deprotection is preferably carried out under acidic conditions. Examples of the acid include hydrochloric acid, acetic acid, trifluoroacetic acid, sulfuric acid, and tosic acid. The acid is used in an amount of preferably from about 1 to 100 equivalents based on the amount of the compound of formula 8 (1 mole).

[0094]

The solvent used in the reaction is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent used herein include alcohols (e.g., methanol), hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., methylene chloride, chloroform, and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), aprotic polar solvents (e.g., N,N-dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to 100°C, and preferably from 0°C to 50°C.

Thus obtained compound of formula 9 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0095]

(Step 8)

This step is a method of allowing the amino group of the compound of formula 9 to react with carboxylic acid represented by $R_4\text{-COOH}$ or with an acid halide represented by $R_4\text{-C(=O)-L}$ (where L represents a chlorine atom or a bromine atom) according to an amidation reaction, so as to obtain the compound of the present invention of formula (I).

[0096]

When carboxylic acid represented by $R_4\text{-COOH}$ is used, the carboxylic acid is used in an amount of generally from 0.5 to 10 moles, and preferably from about 1 to 5 moles, based on the amount of the compound of formula 9 (1 mole) in the presence of a condenser. Note that the carboxylic acid is a commercially available product or can be produced according to a known method.

[0097]

Example of the condenser include N,N'-dicyclohexylcarbodiimide (DCC), N,N'-

diisopropylcarbodiimide (DIC), 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride (WSC), diphenylphosphoryl azide (DPPA), benzotriazol-1-yl-oxytrisdimethylaminophosphonium hexafluorophosphate (BOP), benzotriazol-1-yl-oxytripyrrolidinophosphonium hexafluorophosphate (PyBOP), 7-azabenzotriazol-1-yloxytrispyrrolidinophosphonium phosphate (PyAOP), bromotrispyrrolidinophosphonium hexafluorophosphate (BroP), chlorotris(pyrrolidin-1-yl)phosphonium hexafluorophosphate (PyCroP), 3-(diethoxyphosphoryloxy)-1,2,3-benzotriazin-4(3H)-one (DEPBT), O-(benzotriazol-1-yl)-N,N,N',N'-tetramethyluronium hexafluorophosphate (HATU), and 4-(5,6-dimethoxy-1,3,5-triazin-2-yl)-4-methylmorpholine hydrochloride (DMTMM). Examples of the additive used herein include 1-hydroxybenzotriazole (HOBt), 1-hydroxy-7-azabenzotriazole (HOAt), and N-hydroxysuccinimide (HOSu). Such a substance is used in an amount of generally from 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 9 (1 mole).

[0098]

In addition, a base can be added, as necessary. Examples of such a base include organic amines (e.g., trimethylamine, triethylamine, diisopropylethylamine, N-methylmorpholine, 1,8-diazabicyclo[5,4,0]undec-7-ene, pyridine, and N,N-dimethylaniline), alkaline metal salts (e.g., sodium hydrogen carbonate, potassium hydrogen carbonate, sodium carbonate, potassium carbonate, cesium

TH0092

carbonate, sodium phosphate, potassium phosphate, sodium hydroxide, and potassium hydroxide), metal hydrides (e.g., potassium hydride and sodium hydride), and alkaline metal alkoxides (e.g., sodium methoxide, sodium ethoxide, sodium tert-butoxide, and potassium tert-butoxide). The base is used in an amount of generally from 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 9 (1 mole).

[0099]

The solvent used in the reaction is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent used herein include alcohols (e.g., methanol), hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., methylene chloride, chloroform, and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), aprotic polar solvents (e.g., N,N-dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

[0100]

When an acid halide represented by $R_4-C(=O)-L$ (where L represents a chlorine atom or a bromine atom) is used, the acid halide is used in an amount of generally from 0.5 to

10 moles, and preferably from about 1 to 5 moles, based on the amount of the compound of formula 9 (1 mole). Note that the acid halide is a commercially available product or can be produced according to a known method.

[0101]

In addition, a base can be added, as necessary. Examples of such a base include organic amines (e.g., trimethylamine, triethylamine, diisopropylethylamine, N-methylmorpholine, 1,8-diazabicyclo[5,4,0]undec-7-ene, pyridine, and N,N-dimethylaniline), alkaline metal salts (e.g., sodium hydrogen carbonate, potassium hydrogen carbonate, sodium carbonate, potassium carbonate, cesium carbonate, sodium phosphate, potassium phosphate, sodium hydroxide, and potassium hydroxide), metal hydrides (e.g., potassium hydride and sodium hydride), and alkaline metal alkoxides (e.g., sodium methoxide, sodium ethoxide, sodium tert-butoxide, and potassium tert-butoxide). The base is used in an amount of generally from 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 9 (1 mole).

[0102]

The solvent used in the reaction is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent used herein include alcohols (e.g., methanol), hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., methylene chloride, chloroform, and 1,2-dichloroethane),

nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), aprotic polar solvents (e.g., N,N-dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of the present invention of formula (I) can be isolated and purified by a known separation purification means such as concentration, vacuum concentration, crystallization, solvent extraction, reprecipitation or chromatography.

[0103]

Moreover, in Production Method A, "connection of an azaindole skeleton with the compound of formula 3," "introduction of R₁ into the azaindole skeleton," and "deprotection of P₁ and introduction of -C(=O)-R₄" are carried out in this order. However, this order can be changed. That is to say, the compound can also be synthesized in the order of "introduction of R₁ into an azaindole skeleton," "connection of the azaindole skeleton with the compound of formula 3," and "deprotection of P₁ and introduction of -C(=O)-R₄." Specifically, the compound of formula 2 is subjected to individual steps in the order of Step 3, Step 4, Step 5, and Step 2, so that it can be induced to the compound of formula 7. The conditions

TH0092

applied to each step are the same as those described above. In addition, the compound can also be synthesized in the order of "connection of an azaindole skeleton with the compound of formula 3," "deprotection of P₁ and introduction of -C(=O)-R₄," and "introduction of R₁ into the azaindole skeleton." Specifically, the compound of formula 6 is subjected to individual steps in the order of Step 7, Step 8, Step 5, and Step 6, so that it can be induced to the compound of the present invention of formula (I).

[0104]

Furthermore, in a suitable intermediate in Production Method A, one substituent represented by R₂ can be converted to another substituent represented by R₂. For example, a formyl group can be converted to a methyl group substituted with a di- or mono-alkylamino group, a formyl group can be converted to a hydroxymethyl group, an ester group can be converted to a carboxy group, and an ester group can be converted to an amide group. Conversion of the substituents is not limited thereto, and conversions described in known publications and the like are also included. Conversion of the substituent R₂ from the compound of formula 7 to the compound of formula 8 is shown in Production Method B, and conversion of the substituent R₂ from the compound of formula 8 to the compound of formula 9 is shown in Production Methods C and

D. Conversion of R_2 is not limited to these intermediates, and it can be carried out as appropriate.

[0105]

Further, in Step 5 of Production Method A, a method of introducing R_1 into an azaindole skeleton has been described. Instead of this method, R_1 can also be derived from a formyl group. Such a method will be described in Production Method E.

[0106]

<Production Method B>

Production Method B is a method of undergoing conversion of the substituent R_2 from the compound of formula 7 to the compound of formula 8, so as to obtain the compound of the present invention of formula (I).

[0107]

[0108]

Conversion of the substituent in this production method is conversion of a formyl group to a methyl group substituted with a di- or mono-alkylamino group. The compound of formula 7-1 is the compound of formula 7, in which R_2 is a formyl group. The substituent R_{1a} is a substituent having no formyl groups in the substituent R_x thereof, among the substituents defined as R_1 . The substituent R_{2a} is a methyl group substituted with a di- or mono-alkylamino group, among the substituents defined as R_2 . Other symbols have the same meanings as those described above.

[0109]

(Step 9)

This step is a method of subjecting the compound of formula 7-1 to a reduction reaction, resulting in conversion to a hydroxymethyl group, so as to obtain the compound of formula 10.

[0110]

Examples of the reducer include alkaline metal hydrides (e.g., sodium borohydride, lithium borohydride, sodium cyanoborohydride, sodium triacetoxyborohydride, and lithium aluminum hydride), metal hydrogen complex compounds (e.g., bis(2-methoxyethoxy)aluminum sodium hydride and diisobutyl aluminum hydride), and borane complexes (a borane tetrahydrofuran complex, a borane pyridine complex, etc.). The reducer is used in an amount of generally from about 0.1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 7-1 (1 mole).

[0111]

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., chloroform and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), alcohols (e.g., methanol and ethanol), aprotic polar solvents (e.g., dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), water, and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 10 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0112]

(Step 10)

This step is a method of subjecting the compound of formula 10 to a Mitsunobu reaction to obtain the compound of formula 11.

[0113]

Examples of the Mitsunobu reagent used herein include diethyl azodicarboxylate and diisopropyl azodicarboxylate. The Mitsunobu reagent is used in an amount of generally from about 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 10 (1 mole).

[0114]

Examples of the phosphine reagent used herein include triphenylphosphine, tributylphosphine, and trifurylphosphine. The phosphine reagent is used in an amount of generally from about 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 10 (1 mole).

[0115]

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., chloroform and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), alcohols (e.g., methanol and ethanol), aprotic polar solvents (e.g., dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), water, and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 11 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0116]

(Step 11)

This step is a method of allowing the compound of formula 7-1 to react with amines, which are commercially available products or can be obtained by a known method, according to a reductive amination reaction by the use of a reducer, so as to obtain the compound of formula 11.

[0117]

Examples of the reducer used herein include metal hydrides such as sodium borohydride, lithium borohydride, sodium cyanoborohydride, sodium triacetoxyborohydride, lithium aluminum hydride, bis(2-methoxyethoxy)aluminum sodium hydride, a borane tetrahydrofuran complex, or diisobutyl aluminum hydride. Moreover, mineral acids such as hydrochloric acid or hydrobromic acid, organic acids such as acetic acid, paratoluenesulfonic acid or trifluoromethanesulfonic acid, or Lewis acids such as titanium tetrachloride or ytterbium trifluoromethanesulfonate may be added and used, as necessary. The reducer is used in an amount of generally from 0.5 to 100 moles, and preferably from about 0.5 to 10 moles, based on the amount of the compound of formula 7-1 (1 mole). The acid is used in an amount of generally from 0.5 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 7-1 (1 mole).

[0118]

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., chloroform and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), alcohols (e.g., methanol and ethanol), aprotic polar solvents (e.g.,

dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), water, and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 11 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0119]

(Step 12)

This step is a method of deprotecting the protective group P₂ of the compound of formula 11 to obtain the compound of formula 8-1. This step can be carried out by the same method as that in Step 6.

[0120]

Thus obtained compound of formula 8-1 was treated in the same manner as in the case of inducing the compound of formula 8 to the compound of the present invention of formula (I) in Production Method A, so as to obtain the compound of the present invention of formula (I).

[0121]

<Production Method C>

Production Method C is a method of undergoing conversion of the substituent R₂ from the compound of

TH0092

formula 8 to the compound of formula 9, so as to obtain the compound of the present invention of formula (I).

[0122]

[0123]

The conversion of the substituent is conversion of a formyl group to a methyl group substituted with a di- or mono-alkylamino group, and conversion of a formyl group to a hydroxymethyl group. The compound of formula 8-2 is the compound of formula 8, in which R_2 is a formyl group. The substituent R_{2b} is a hydroxymethyl group, or a methyl group substituted with a di- or mono-alkylamino group, among the

substituents defined as R_2 . Other symbols have the same meanings as those described above.

[0124]

(Step 13)

This step is a method of subjecting the formyl group of the compound of formula 8-2 to a reduction reaction so that it is converted to a hydroxymethyl group, so as to obtain the compound of formula 12-1. This step can be carried out by the same method as that in Step 9.

[0125]

(Step 14)

This step is a method of subjecting the compound of formula 12-1 to a Mitsunobu reaction to obtain the compound of formula 13-1. This step can be carried out by the same method as that in Step 10.

[0126]

(Step 15)

This step is a method of deprotecting the protective group for the amino group of the compound of formula 12-1 or the compound of formula 13-1, so as to obtain the compound of formula 9-2. This step can be carried out by the same method as that in Step 7.

Thus obtained compound of formula 9-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0127]

Thus obtained compound of formula 9-2 was treated in the same manner as in the case of inducing the compound of formula 9 to the compound of the present invention of formula (I) in Production Method A, so as to obtain the compound of the present invention of formula (I).

[0128]

<Production Method D>

Production Method D is a method of undergoing conversion of the substituent R_2 from the compound of formula 8 to the compound of formula 9, so as to obtain the compound of the present invention of formula (I).

[0129]

[0130]

The compound of formula 8-3 is the compound of formula 8, in which R_2 represents an ester group $C(=O)OR_x$. The conversion of the substituent is conversion of the ester group to a carboxy group and an amide group. The substituent R_{2c} is a carboxy group or a group represented by $-C(=O)-N(R_x)(R_y)$, among the substituents defined as R_2 . Other symbols have the same meanings as those described above.

[0131]

(Step 16)

This step is a method of subjecting the compound of formula 8-3 to a hydrolysis reaction under basic conditions, so as to obtain the compound of formula 12-2.

Examples of the base, which is preferably used herein, include sodium hydrogen carbonate, sodium carbonate, potassium carbonate, cesium carbonate, sodium hydroxide, potassium hydroxide, and lithium hydroxide. The base is used in an amount of generally from 0.5 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 8-3 (1 mole).

The solvent is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent include water, methanol, ethanol, isopropanol, tetrahydrofuran, 1,4-dioxane, and N,N-dimethylformamide. These solvents can be used alone or in combination. The reaction time is from 0.1 to 100 hours, and preferably

from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C. Thus obtained compound of formula 12-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0132]

(Step 17)

This step is a method of subjecting the compound of formula 12-2 and amine to an amidation reaction to obtain the compound of formula 13-2.

[0133]

The amidation can be carried out by a conventionally known method. An example of such a conventionally known method is a method of allowing the compound of formula 12-2 to react with the corresponding amine in the presence of a condenser (see "*Peptide Gosei no Kiso to Jikken* (Base and Experiments of Peptide Synthesis)" (Nobuo IZUMIYA, et al., Maruzen, 1983)). Thus obtained compound of formula 13-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0134]

(Step 18)

This step is a method of deprotecting the protective group for the amino group of the compound of formula 12-2 or the compound of formula 13-2, so as to obtain the

TH0092

compound of formula 9-3. This step can be carried out by the same method as that in Step 7. Thus obtained compound of formula 9-3 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0135]

<Production Method E>

[0136]

[0137]

Production Method E is a method of inducing the compound of formula 14 having a formyl group as a substituent of azaindole to the compound of formula 7-2 having R_1 via conversion of the formyl group. R_{1b} is an

oxazol-5-yl group, a 4-methyl-5-oxo-4,5-dihydro-1,3,4-oxadiazol-2-yl group, a 1,3,4-oxadiazol-2-yl group, or a 1,2,4-oxadiazol-5-yl group, among substituents represented by R₁. The compound of formula 14 can be obtained from commercially available 4-chloro-1H-pyrrolo[2,3-b]pyridine-3-carbaldehyde or the like, via Step 2 and Step 4. Other symbols have the same meanings as those described above.

[0138]

(Step 19)

This step is a method of allowing the compound of formula 14 to act on para-tolylsulfonylmethylisocyanide under basic conditions to construct an oxazole ring, so as to obtain the compound of formula 7-2.

The para-tolylsulfonylmethylisocyanide is used in an amount of generally from 1 to 100 moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 14 (1 mole).

[0139]

Either an organic base or an inorganic base can be used herein as a base. Examples of the organic base include alkyl amines such as dicyclohexylamine, diisopropylamine, diethylamine, triethylamine, tributylamine or diisopropylethylamine, alkyl anilines such as N,N-dimethylaniline, heterocyclic amines such as piperidine, pyrrolidine, 2,2,6,6-tetramethylpiperidine, morpholine, piperazine, imidazole, 1-ethylpiperidine, 4-methylmorpholine, 1-methylpyrrolidine, 1,4-

diazabicyclo[2.2.2]octane or 1,8-diazabicyclo[5.4.0]-7-undecene, quaternary ammonium salts such as benzyltriethylammonium chloride or methyltrioctylammonium chloride, and diamines such as N,N,N',N'-tetramethylethylenediamine. Examples of the inorganic base include sodium hydroxide, potassium hydroxide, sodium carbonate, potassium carbonate, sodium hydrogen carbonate, and potassium hydrogen carbonate. The base is used in an amount of generally from 0.5 to 10 moles, and preferably from about 1 to 5 moles, based on the amount of the compound of formula 14 (1 mole).

[0140]

The solvent used in the reaction is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent used herein include alcohols (e.g., methanol), hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., methylene chloride, chloroform, and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), aprotic polar solvents (e.g., N,N-dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), and the mixtures thereof.

The reaction time is from 0.1 to 100 hours, and preferably from 0.5 to 24 hours. The reaction temperature is from 0°C to the boiling point of the solvent, and preferably from 0°C to 100°C.

Thus obtained compound of formula 7-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0141]

(Step 20)

This step is a method of subjecting the compound of formula 14 to an oxidation reaction to obtain the compound of formula 15.

The oxidation can be carried out by a generally known method, for example, the method described in "5th edition, *Jikken Kagaku Koza 17, Yuki Kagobutsu no Gosei V, Sanka Hanno* (5th Edition, Experimental Chemistry Seminar 17, Synthesis of Organic Compounds V, Oxidation Reaction)," edited by the Chemical Society of Japan (2005), or a method equivalent thereto. In this reaction, Pinnick oxidation (for example, *Tetrahedron* 1981, 37, 2091) is preferably used.

Thus obtained compound of formula 15 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0142]

(Step 21)

This step is a method of subjecting the compound of formula 15 and hydrazines, which are commercially available products or can be produced by a known method,

to a dehydration condensation reaction, so as to obtain the compound of formula 16. Examples of the hydrazines used in this step include hydrazine monohydrate and formyl hydrazine. This step can be carried out according to a known method by the use of a common condenser, so as to obtain the compound of formula 16.

This step can be carried out by the same method as that in Step 8.

Thus obtained compound of formula 16 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0143]

(Step 22)

This step is a method of converting the acyl hydrazide group of the compound of formula 16 to a 1,3,4-oxadiazole ring to obtain the compound of formula 7-2.

This step can be carried out according to generally known methods (for example, J. Med. Chem, Vol. 34, p. 2060, 1991, Tetrahedron Letters, vol. 49, p. 879, 2008, J. Med. Chem., vol. 52, p. 6270, 2009). The compound of formula 7-2 can be synthesized, for example, by allowing triethyl orthoformate, triethyl orthoacetate, triethyl orthopropionate, acid anhydride, acetyl chloride or the like to react with the compound of formula 16, and such a compound is used in an amount of generally from 1 to 100

moles, and preferably from about 1 to 10 moles, based on the amount of the compound of formula 16 (1 mole).

[0144]

As necessary, Lewis acid, which includes mineral acids such as hydrochloric acid or hydrobromic acid and organic acids such as acetic acid, para-toluenesulfonic acid or trifluoromethanesulfonic acid, may be added. The acid is used in an amount of generally from 0.01 to 100 moles, and preferably from about 0.05 to 10 moles, based on the amount of Compound 16 (1 mole).

[0145]

The solvent used in the reaction is not particularly limited, as long as it does not adversely affect the reaction. Examples of the solvent used herein include alcohols (e.g., methanol), hydrocarbons (e.g., benzene, toluene, and xylene), halogenated hydrocarbons (e.g., methylene chloride, chloroform, and 1,2-dichloroethane), nitriles (e.g., acetonitrile), ethers (e.g., dimethoxyethane and tetrahydrofuran), aprotic polar solvents (e.g., N,N-dimethylformamide, dimethyl sulfoxide, and hexamethylphosphoramide), and the mixtures thereof. Thus obtained compound of formula 7-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0146]

(Step 23)

This step can be carried out by the same method as that in Step 14.

Thus obtained compound of formula 17 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0147]

(Step 24)

This step is a method of converting the amide group of the compound of formula 17 to a 1,2,4-oxadiazole ring, so as to obtain the compound of formula 7-2.

This step can be carried out by the same method as that in Step 22.

Thus obtained compound of formula 7-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0148]

(Step 25)

This step is a method of converting the acyl hydrazide group of the compound of formula 16 to a 1,3,4-oxadiazolone ring, so as to obtain the compound of formula 18. The compound of formula 18 can be synthesized, for example, by allowing carbonylimidazole, phosgene or the like to react with the compound of formula 16.

This step can be carried out by the same method as that in Step 22.

Thus obtained compound of formula 18 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

[0149]

(Step 26)

This step is a method of subjecting the compound of formula 18 to an alkylation reaction in the presence of a base to obtain the compound of formula 7-2.

The alkylation can be carried out by a conventionally known method.

Thus obtained compound of formula 7-2 can be isolated and purified by a known separation purification means, or it can be subjected to the subsequent step without such isolation and purification.

Thus obtained compound of formula 7-2 can be induced to the compound of the present invention of formula (I) in the same manner as the method of obtaining the compound of the present invention of formula (I) from the compound of formula 7 in Production Method A.

[0150]

The compound of the present invention can easily be isolated and purified according to an ordinary separation means. Examples of such means include solvent extraction, recrystallization, preparatory reverse-phase high-performance liquid chromatography, column chromatography, and preparatory thin-layer chromatography.

[0151]

When the compound of the present invention has isomers such as an optical isomer, a stereoisomer, a regioisomer, a rotational isomer or a tautomer, such isomers and the mixtures thereof are all included in the compound of the present invention. For example, when the compound of the present invention has an optical isomer, an optical isomer obtained as a result of resolution of a racemic mixture is also included in the compound of the present invention.

[0152]

The compound of the present invention or a salt thereof may be a crystal. Even if the crystal form is a single form or a polymorphic mixture, the crystal is included in the compound of the present invention or a salt thereof. Such a crystal can be produced by crystallizing this compound according to a known crystallization method. The compound of the present invention or a salt thereof may be either a solvate (for example, a hydrate), or a non-solvate, and both of them are included in the compound of the present invention or a salt thereof. Compounds labeled with isotopes (for example, deuterium, ^3H , ^{13}C , ^{14}C , ^{35}S , and ^{125}I) or the like are also included in the compound of the present invention or a salt thereof.

[0153]

A prodrug of the compound of the present invention or a salt thereof means a compound, which is converted to the compound of the present invention or a salt thereof as a result of a reaction with enzyme, gastric acid or the like under *in vivo* physiological conditions; namely, a compound, which undergoes enzymatic oxidation, reduction, hydrolysis, etc., so that it is changed to the compound of the present invention or a salt thereof, or a compound, which undergoes hydrolysis or the like by the action of gastric acid or the like, so that it is changed to the compound of the present invention or a salt thereof. Moreover, such a prodrug of the compound of the present invention or a salt thereof may also be a compound, which changes to the compound of the present invention or a salt thereof under physiological conditions as described in "*Iyakuhin no Kaihatsu* (Development of Pharmaceutical Products)," Vol. 7, *Bunshi Sekkei* (Molecular Designing), pp. 163-198, published by Hirokawa Shoten, 1990.

[0154]

A salt of the compound of the present invention is not particularly limited, as long as it is pharmaceutically acceptable, and it means a salt commonly used in the field of organic chemistry. Examples of such a salt include salts, such as a base-added salt in a carboxy group when the present compound has the carboxy group, or an acid-added salt in an amino group or a basic

heterocyclic group when this compound has the amino group or the basic heterocyclic group.

Examples of the base-added salt include: alkaline metal salts such as a sodium salt or a potassium salt; alkaline-earth metal salts such as a calcium salt or a magnesium salt; ammonium salts; and organic amine salts such as a trimethylamine salt, a triethylamine salt, a dicyclohexylamine salt, an ethanolamine salt, a diethanolamine salt, a triethanolamine salt, a procaine salt, and an N,N'-dibenzylethylenediamine salt.

Examples of the acid-added salt include: inorganic acid salts such as a hydrochloride, a sulfate, a nitrate, a phosphate, or a perchlorate; organic acid salts such as an acetate, a formate, a maleate, a fumarate, a tartrate, a citrate, an ascorbate, or a trifluoroacetate; and sulfonates such as a methanesulfonate, an isethionate, a benzenesulfonate, or a p-toluenesulfonate.

[0155]

The compound of the present invention or a salt thereof has a higher selective inhibitory activity on JAK3, than on JAK1 and JAK2. In addition, the compound of the present invention or a salt thereof has an excellent action to suppress the growth of human PBMC. Since the compound of the present invention or a salt thereof has an excellent JAK3-inhibitory activity, it is useful as a pharmaceutical agent for preventing or treating a disease involving JAK3. Moreover, since the compound of the

present invention or a salt thereof has excellent selectivity to JAK3, it is useful as a pharmaceutical agent with reduced side effects, which are caused by JAK1 and JAK2 (i.e., lipid rise, anemia, neutropenia, immunosuppression, etc.). The "a disease involving JAK3" is a disease, the incidence of which is decreased and the symptoms of which achieve a remission, are alleviated, and/or are completely recovered by deleting, suppressing and/or inhibiting the function of JAK3. Examples of such a disease involving JAK3 include autoimmune disease (rheumatoid arthritis, systemic lupus erythematosus, scleroderma, polymyositis/dermatomyositis, Sjogren's syndrome, Behcet's disease, etc.), allergic disease (bronchial asthma, allergic rhinitis/hay fever, atopic dermatitis, food allergy, anaphylaxis, drug allergy, hives, conjunctivitis, etc.), nervous system disease (multiple sclerosis, Alzheimer's disease, etc.), inflammatory bowel disease (ulcerative colitis, Crohn's disease), psoriasis, contact dermatitis, diabetes, celiac disease, viral infectious disease, acute respiratory distress syndrome (ARDS), graft-versus-host disease (GVHD), transplant rejection, hematologic malignancy (lymphoma, leukemia), and other malignant tumors. Among these diseases, psoriasis, graft-versus-host disease, multiple sclerosis, inflammatory bowel disease, systemic lupus erythematosus and rheumatoid arthritis are preferable, and rheumatoid arthritis or multiple sclerosis is more preferable.

[0156]

When the compound of the present invention or a salt thereof is used as a pharmaceutical agent, a pharmaceutical carrier can be mixed into the compound, as necessary, and various dosage forms can be adopted depending on prevention or treatment purposes. As such a dosage form, any one of an oral agent, an injection, a suppository, an ointment, an inhalant, a patch and the like may be adopted. Since the compound of the present invention or a salt thereof has excellent oral absorbability, an oral agent is preferably adopted. These dosage forms can be produced by commonly used formulation methods, which are known to a person skilled in the art.

[0157]

As such pharmaceutical carriers, various types of organic or inorganic carrier substances, which are commonly used as preparation materials, are used. Such a carrier is mixed as an excipient, a binder, a disintegrator or a lubricant into a solid preparation, and is also mixed as a solvent, a solubilizer, a suspending agent, a tonicity agent, a buffer, a soothing agent and the like into a liquid preparation. In addition, preparation additives such as an antiseptic, an antioxidant, a coloring agent, a sweetener or a stabilizer can also be used, as necessary.

[0158]

In preparing a solid preparation for oral use, an excipient, and as necessary, an excipient, a binder, a disintegrator, a lubricant, a coloring agent, a flavoring agent and the like are added to the compound of the present invention, and thereafter, a tablet, a coated tablet, a granule, a powder agent, a capsule, and the like can be produced by an ordinary method.

[0159]

In preparing an injection, a pH adjuster, a buffer, a stabilizer, a tonicity agent, a local anesthetic and the like are added to the compound of the present invention, and thereafter, subcutaneous, intramuscular, and intravenous injections can be produced by an ordinary method.

[0160]

The amount of the compound of the present invention to be mixed into each of the aforementioned dosage unit forms is not constant, and it depends on the symptoms of a patient to whom the compound is to be applied, or the dosage form or the like. In general, the compound of the present invention is desirably used at a dose of approximately from 0.05 to 1,000 mg per dosage unit form in the case of an oral agent, and at a dose of approximately from 0.01 to 500 mg in the case of injection, and at a dose of approximately from 1 to 1,000 mg in the case of a suppository.

[0161]

TH0092

The applied dose of a drug having the aforementioned dosage form varies depending on the symptoms, body weight, age, sex and the like of a patient, and it cannot be unconditionally determined. The compound of the present invention may be generally applied at a dose of approximately from 0.05 to 5,000 mg, and preferably from 0.1 to 1,000 mg, per adult (body weight: 50 kg) per day. This dose is preferably administered to a patient once a day, or divided over 2 or 3 administrations.

[Examples]

[0162]

Hereinafter, the present invention will be described in detail in the following examples. However, these examples are not intended to limit the scope of the present invention. Various types of reagents used in the examples are commercially available products, unless otherwise specified. For silica gel chromatography, Biotage SNAP Cartridge Ultra manufactured by Biotage was used, and for basic silica gel chromatography, Biotage SNAP Cartridge KP-NH manufactured by Biotage was used.

For preparatory thin-layer chromatography, Kieselgel TM60F254, Art. 5744 manufactured by Merck, or NH₂ Silica Gel 60F254 Plate Wako manufactured by Wako Pure Chemical Industries, Ltd. was used.

For ¹H-NMR, AL400 (400 MHz) manufactured by JEOL, Mercury (400 MHz) manufactured by Varian, or Inova (400

MHz) manufactured by Varian was used, and the measurement was carried out by the use of tetramethylsilane as a standard substance. In addition, for mass spectrum, Micromass ZQ or SQD manufactured by Waters was used, and the measurement was carried out according to an electrospray ionization method (ESI) or an atmospheric pressure chemical ionization method (APCI). A microwave reaction was carried out by the use of Initiator manufactured by Biotage.

Reference Example 1(1a) 5-((tert-

Butoxycarbonyl)amino)cyclohex-1-en-1-yl

trifluoromethanesulfonate

Reference Example 1(1b) 3-((tert-

Butoxycarbonyl)amino)cyclohex-1-en-1-yl

trifluoromethanesulfonate

Tert-Butyl (3-oxocyclohexyl)carbamate (5.0 g) and N-phenyl-bis(trifluoromethanesulfonimide) (11.0 g) were dissolved in THF (100 mL), and the obtained solution was then cooled to -78°C. Thereafter, a THF solution (26.0 mL) of 2.0 M lithium diisopropylamide was added to the reaction solution, the temperature of the mixed solution

was increased to 0°C, and the mixed solution was then stirred for 30 minutes. Thereafter, a 0.5 M aqueous solution of potassium hydrogen sulfate was added to the reaction mixture for dilution, and the obtained solution was then extracted with ethyl acetate. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain each of the compound of Reference Example 1(1a) (4.39 g, yield: 54%), and the compound of Reference Example 1(1b) (2.00 g, yield: 25%).

Reference Example 1(1a): ¹H NMR(CDCl₃) δ: 5.84- 5.74 (m, 1H), 4.74 - 4.46 (m, 1H), 4.06 - 3.85 (m, 1H), 2.77 - 2.63 (m, 1H), 2.38 - 2.18 (m, 3H), 1.90 - 1.80 (m, 1H), 1.66 - 1.53 (m, 1H), 1.45 (s, 9H)

ESI-MS m/z 346(MH⁺)

Reference Example 1(1b): ¹H NMR(CDCl₃) δ: 5.79 - 5.72 (m, 1H), 4.70 - 4.50 (m, 1H), 4.47 - 4.33 (m, 1H), 2.40 - 2.25 (m, 2H), 1.94 - 1.67 (m, 3H), 1.56 - 1.49 (m, 1H), 1.45 (s, 9H)

ESI-MS m/z 346(MH⁺)

[0164]

Reference Example 1(2a) tert-Butyl (3-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)cyclohex-3-en-1-yl)carbamate

DMF (90 mL) was added to the compound of Reference Example 1(1a) (9.25 g), 4,4,4',4',5,5,5',5'-octamethyl-2,2'-bi(1,3,2-dioxaborolane) (10.2 g) and potassium acetate (3.95 g), followed by nitrogen substitution. Thereafter, PdCl₂(dppf)CH₂Cl₂ (980 mg) was added to the resultant, and the obtained mixture was then stirred at 80°C for 14 hours. Thereafter, the reaction mixture was cooled to a room temperature, and ethyl acetate and water were then added to the mixture. Thereafter, thus obtained mixture was filtered through Celite. The filtrate was extracted with ethyl acetate, and thereafter, the gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (6.51 g, yield: 75%).

¹H NMR(CDCl₃) δ: 6.56 - 6.51 (m, 1H), 4.58 - 4.41 (m, 1H), 3.80 - 3.62 (m, 1H), 2.58 - 2.41 (m, 1H), 2.31 - 2.13 (m, 2H), 1.98 - 1.77 (m, 2H), 1.54 - 1.47 (m, 1H), 1.44 (s, 9H), 1.25 (s, 12H)

Reference Example 2

Reference Example 2(1a) 4-((tert-butoxycarbonyl)amino)cyclopent-1-en-1-yl trifluoromethanesulfonate

Reference Example 2(1b) 3-((tert-butoxycarbonyl)amino)cyclopent-1-en-1-yl trifluoromethanesulfonate

Under a nitrogen atmosphere, a THF solution (114 mL) of 1.0 M lithium hexamethyldisilazide was added to THF (100 mL), and the obtained mixture was then cooled to -78°C . A THF (100 mL) solution of tert-butyl (3-oxocyclopentyl)carbamate (9.0 g) was added to the reaction solution over 10 minutes. Thereafter, N-phenyl-bis(trifluoromethanesulfonimide) (19.4 g) was added to the mixture, and the temperature of the obtained mixture was then increased to 0°C , followed by stirring for 10 minutes. Thereafter, water, toluene, and a 5 M aqueous solution of

TH0092

sodium hydroxide were added to the reaction mixture, and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was extracted with toluene. The gathered organic layer was successively washed with a 0.5 M aqueous solution of potassium hydrogen sulfate, a saturated sodium hydrogen carbonate aqueous solution and a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain each of the compound of Reference Example 2(1a) (8.61 g, yield: 58%) and the compound of Reference Example 2(1b) (4.31 g, yield: 29%).

Reference Example 2(1a): ^1H NMR(CDCl_3) δ : 5.62 - 5.56 (m, 1H), 4.87 - 4.67 (m, 1H), 4.49 - 4.23 (m, 1H), 3.07 - 2.76 (m, 2H), 2.50 - 2.40 (m, 1H), 2.32 - 2.20 (m, 1H), 1.45 (s, 9H)

ESI-MS m/z 332(MH^+)

Reference Example 2(1b): ^1H NMR(CDCl_3) δ : 5.68 - 5.61 (m, 1H), 4.89 - 4.70 (m, 1H), 4.69 - 4.48 (m, 1H), 2.75 - 2.43 (m, 3H), 1.84 - 1.66 (m, 1H), 1.45 (s, 9H)

ESI-MS m/z 332(MH^+)

[0167]

Reference Example 2(2a) tert-Butyl (3-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)cyclopent-3-en-1-yl)carbamate

A product of interest was obtained in accordance with Reference Example 1(2a), with the exception that the compound of Reference Example 2(1a) was used instead of the compound of Reference Example 1(1a).

^1H NMR(CDCl_3) δ : 6.50 - 6.45 (m, 1H), 4.76 - 4.58 (m, 1H), 4.37 - 4.19 (m, 1H), 2.86 - 2.70 (m, 2H), 2.37 - 2.22 (m, 2H), 1.43 (s, 9H), 1.27 (s, 12H)

Reference Example 3

Reference Example 3(1) tert-Butyl ((1S,3R)-3-hydroxycyclohexyl)carbamate

(1R,3S)-3-Aminocyclohexanol (13.7 g) was dissolved in 2-methyltetrahydrofuran (140 mL), and a saturated aqueous solution of sodium hydrogen carbonate (70 mL) was then

TH0092

added to the obtained solution. Thereafter, di-tert-butyl dicarbonate (27.5 g) was added to the reaction mixture at 0°C, and the obtained mixture was then stirred at a room temperature for 16 hours. Thereafter, water was added to the reaction mixture for dilution, and the obtained mixture was then extracted with 2-methyltetrahydrofuran. The gathered organic layer was washed with a saturated aqueous solution of ammonium chloride, with a saturated aqueous solution of sodium hydrogen carbonate and with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. The obtained solid was washed with heptane to obtain a product of interest (22.7 g, yield: 89%).

^1H NMR(CDCl_3) δ : 4.82 - 4.58 (m, 1H), 3.82 - 3.66 (m, 1H), 3.63 - 3.40 (m, 1H), 2.25 - 2.11 (m, 1H), 1.93 - 1.74 (m, 3H), 1.62 - 1.55 (m, 1H), 1.44 (s, 9H), 1.39 - 1.04 (m, 4H)

Reference Example 3(2) (S)-tert-Butyl (3-oxocyclohexyl)carbamate

The compound of Reference Example 3(1) (21.5 g) was dissolved in ethyl acetate (200 mL), and thereafter, 1-methyl-2-azaadamantane N-oxyl (166 mg), a 5 M aqueous solution of sodium bromide (6 mL) and a saturated aqueous solution of sodium hydrogen carbonate (100 mL) were successively added to the above obtained solution.

Thereafter, a 10% aqueous solution of sodium hypochlorite (100 mL) was added to the mixed solution at 0°C, and the obtained mixture was then stirred for 1 hour. Thereafter, a 10% aqueous solution of sodium hydrogen sulfite was added to the reaction mixture at 0°C, and the obtained mixture was diluted with a 10% aqueous solution of potassium carbonate and was then extracted with ethyl acetate. The gathered organic layer was washed with 1 M hydrochloric acid, with a saturated aqueous solution sodium hydrogen carbonate, with water and with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. The obtained solid was washed with diisopropyl ether-heptane to obtain a product of interest (19.4 g, yield: 91%).

^1H NMR(CDCl_3) δ : 4.67 - 4.35 (m, 1H), 4.05 - 3.77 (m, 1H), 2.76 - 2.64 (m, 1H), 2.43 - 2.19 (m, 3H), 2.14 - 1.92 (m, 2H), 1.79 - 1.64 (m, 2H), 1.44 (s, 9H)

Reference Example 3(3) (S)-5-((tert-butoxycarbonyl)amino)cyclohex-1-en-1-yl trifluoromethanesulfonate

A THF (160 mL) solution of the compound of Reference Example 3(2) (32.3 g) was added dropwise to a THF solution (780 mL) of sodium bis(trimethylsilyl)amide (60.5 g), which had been cooled to -78°C, and the reaction mixture was then stirred for 30 minute. N-phenyl-

TH0092

bis(trifluoromethanesulfonimide) (64.3 g) was added to the reaction mixture at -78°C, and the obtained mixture was then stirred for 30 minutes. Thereafter, the temperature of the reaction mixture was increased to 0°C, and the mixture was further stirred for 2 hours. Thereafter, water and a 1 M aqueous solution of sodium hydroxide were added to the reaction mixture, the temperature of the obtained mixture was then increased to a room temperature, and the mixture was then extracted with toluene. The gathered organic layer was washed with a 1 M aqueous solution of potassium hydrogen sulfate, with a saturated aqueous solution of sodium hydrogen carbonate, with water and with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. Heptane was added to the obtained residue, and the precipitated solid was collected by filtration and was then washed with heptane to obtain a product of interest (41.6 g, yield: 79%).

¹H NMR(CDCl₃) δ: 5.84 - 5.74 (m, 1H), 4.74 - 4.46 (m, 1H), 4.06 - 3.85 (m, 1H), 2.77 - 2.63 (m, 1H), 2.38 - 2.18 (m, 3H), 1.90 - 1.80 (m, 1H), 1.66 - 1.53 (m, 1H), 1.45 (s, 9H)

Reference Example 3(4) (S)-tert-Butyl (3-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)cyclohex-3-en-1-yl)carbamate

To a toluene (450 mL) solution of the compound of Reference Example 3(3) (32.8 g), bis(pinacolato)diboron (26.5 g), potassium acetate (28.0 g), triphenylphosphine (2.49 g) and $\text{PdCl}_2(\text{PPh}_3)_2$ (3.33 g) were successively added. The temperature of the obtained mixture was increased to 60°C, and the mixture was then stirred under a nitrogen atmosphere for 4 hours. Thereafter, the reaction mixture was cooled to a room temperature, toluene was then added to the mixture, and thereafter thus obtained mixture was filtered through Celite. The filtrate was washed with a 1 M aqueous solution of sodium hydroxide, with 1 M hydrochloric acid, with a saturated aqueous solution of sodium hydrogen carbonate, with water and with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. Ethyl acetate-heptane and activated carbon were added to the obtained residue, and the obtained mixture was left for 1 hour and was then filtered through Celite. The filtrate was concentrated under a reduced pressure, and cyclohexane-heptane was then added to the obtained residue. The precipitated solid was collected by filtration and was then washed with cyclohexane-heptane to obtain a product of interest (21.3 g, yield: 69%).

^1H NMR(CDCl_3) δ : 6.56 - 6.51 (m, 1H), 4.58 - 4.41 (m, 1H), 3.80 - 3.62 (m, 1H), 2.58 - 2.41 (m, 1H), 2.31 - 2.13 (m, 2H), 1.98 - 1.77 (m, 2H), 1.54 - 1.47 (m, 1H), 1.44 (s, 9H), 1.25 (s, 12H)

Example 1

Example 1(1) tert-Butyl (3-(3-iodo-1-tosyl-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)carbamate (Compound 1(1))

To 4-bromo-1H-pyrrolo[2,3-b]pyridine (2.00 g), the compound of Reference Example 1(2a) (4.60 g) and tripotassium phosphate (5.41 g), 1,4-dioxane (20 mL) and water (3.3 mL) were added, followed by nitrogen substitution, and $PdCl_2(dppf)CH_2Cl_2$ (746 mg) was then added to the reaction mixture. Thus obtained mixture was stirred at 100°C for 5 hours. Thereafter, the reaction mixture was

cooled to a room temperature, and ethyl acetate and water were then added to the mixture. Thereafter, thus obtained mixture was filtered through Celite. The filtrate was then extracted with ethyl acetate, and the gathered organic layer was then washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a corresponding coupling product. The obtained coupling product was subjected to the subsequent reaction without further purification.

DMF (30 mL) was added to the obtained coupling product, and the obtained mixture was then cooled to 0°C. Subsequently, N-iodosuccinimide (2.52 g) was added to the mixture, and the obtained mixture was then stirred at 0°C for 30 minutes. Thereafter, a 0.5 M aqueous solution of sodium hydrogen sulfite was added to the reaction mixture, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a corresponding iodine product. The obtained iodine product was subjected to the subsequent reaction without further purification.

DMF (30 mL) was added to the obtained iodine product, and the obtained mixture was then cooled to 0°C. Thereafter, 60% sodium hydride (1.02 g), and then, para-toluenesulfonyl chloride (2.33 g) were added to the reaction mixture, and the obtained mixture was then stirred at 0°C for 30 minutes. Thereafter, ice water was added to the reaction mixture, and the water layer was then extracted with ethyl acetate. The gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (3.49 g, yield: 58%).

^1H NMR(CDCl_3) δ : 8.35 (d, $J=4.9$ Hz, 1H), 8.10 (d, $J=8.5$ Hz, 2H), 7.89 (s, 1H), 7.30 (d, $J=8.5$ Hz, 2H), 6.94 (d, $J=4.9$ Hz, 1H), 5.72 - 5.67 (m, 1H), 4.75 - 4.59 (m, 1H), 4.11 - 3.97 (m, 1H), 2.70 - 2.60 (m, 1H), 2.40 - 2.32 (m, 2H), 2.39 (s, 3H), 2.22 - 2.09 (m, 1H), 2.04 - 1.94 (m, 1H), 1.75 - 1.62 (m, 1H), 1.44 (s, 9H)

[0175]

Example 1(2) N-(3-(3-Phenyl-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 1)

To Compound 1(1) (100 mg), phenylboronic acid (31.0 mg) and tripotassium phosphate (89.2 mg), 1,4-dioxane (1.8 mL) and water (0.3 mL) were added, followed by nitrogen

substitution. Thereafter, $\text{PdCl}_2(\text{dppf})\text{CH}_2\text{Cl}_2$ (12.3 mg) was added to the reaction mixture, and the obtained mixture was then stirred at 100°C for 2 hours. Thereafter, the reaction mixture was cooled to a room temperature, and ethyl acetate and water were then added to the mixture. Thereafter, thus obtained mixture was filtered through Celite. The filtrate was extracted with ethyl acetate, and the gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure.

THF (1.0 mL) and a THF solution (1.0 mL) of 1.0 M tetrabutylammonium fluoride were added to the obtained residue, and the obtained mixture was then stirred at a room temperature for 4 hours. Thereafter, the reaction mixture was concentrated under a reduced pressure, and was then purified by silica gel chromatography (chloroform : methanol) to obtain a corresponding coupling product. The obtained coupling product was subjected to the subsequent reaction without further purification.

Methanol (1 mL) and a 1,4-dioxane solution (1 mL) of 4 M hydrochloric acid were added to the obtained coupling product, and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. Under a nitrogen atmosphere, dichloromethane (2 mL) and diisopropylethylamine (0.2 mL) were added to the reaction

TH0092

mixture, and the obtained mixture was then cooled to 0°C. Thereafter, acryloyl chloride (0.02 mL) was added to the reaction mixture, and the obtained mixture was then stirred for 30 minutes. Thereafter, an aqueous ammonia solution, chloroform and methanol were successively added to the reaction mixture, and thus obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (38.1 mg, yield: 66%).

Example 10 N-(3-(3-(5-(Hydroxymethyl) furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 10)

Methanol (1 mL) was added to the Compound 9 (15 mg), and the obtained mixture was then cooled to 0°C . Thereafter, sodium borohydride (2 mg) was added to the reaction mixture, and the obtained mixture was then stirred for 5 minutes. Thereafter, a saturated saline was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (methanol : chloroform) to obtain the title compound (13 mg, yield: 87%).

Example 12 N-(3-(3-(Furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 12)

DMF (1.0 mL) was added to Compound 1(1) (100 mg) and tributyl(furan-2-yl)stannane (90 mg), followed by nitrogen substitution. Thereafter, $\text{PdCl}_2(\text{PPh}_3)_2$ (12.0 mg) was added to the reaction mixture, and the obtained mixture was then stirred under heating at 100°C for 2 hours. Thereafter, a saturated aqueous solution of sodium hydrogen carbonate and ethyl acetate were added to the reaction mixture, and the obtained mixture was stirred and was then filtered through Celite. The filtrate was extracted with ethyl acetate, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure.

The obtained residue was dissolved in THF (1 mL), a THF solution (1 mL) of 1.0 M tetrabutylammonium fluoride was then added to the obtained solution. Thus obtained mixture was stirred at a room temperature for 5 hours. Thereafter, a 0.067 M phosphate buffer (pH 7.4) was added to the reaction mixture, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a corresponding coupling product.

The obtained coupling product was subjected to the subsequent reaction without further purification.

Methanol (1 mL) and a 1,4-dioxane solution (1 mL) of 4 M hydrochloric acid were added to the obtained coupling product, and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. Under a nitrogen atmosphere, dichloromethane (2 mL) and diisopropylethylamine (0.2 mL) were added to the reaction mixture, and the obtained mixture was then cooled to 0°C. Thereafter, acryloyl chloride (0.02 mL) was added to the reaction mixture, and the obtained mixture was then stirred for 30 minutes. Thereafter, an aqueous ammonia solution, chloroform and methanol were successively added to the reaction mixture, and thus obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (40.3 mg, yield: 72%).

^1H NMR(CDCl_3 - CD_3OD) δ : 8.23 - 8.15 (m, 1H), 7.54 - 7.42 (m, 2H), 6.99 - 6.88 (m, 1H), 6.49 - 6.42 (m, 1H), 6.39 - 6.22 (m, 2H), 6.22 - 6.05 (m, 1H), 5.69 - 5.56 (m, 2H), 4.35 - 4.15 (m, 1H), 2.74 - 2.59 (m, 1H), 2.16 (d, $J=9.3$ Hz, 3H), 1.96 - 1.81 (m, 1H), 1.69 - 1.52 (m, 1H)

Example 14(2) N-(3-(3-(4-(Hydroxymethyl) furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 14)

THF (0.5 mL), methanol (0.5 mL) and a 2 M aqueous solution of sodium hydroxide (0.3 mL) were added to the Compound 14(1) (50 mg), and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, a saturated aqueous solution of ammonium chloride was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure.

The obtained residue was dissolved in methanol (1.5 mL), and the obtained solution was then cooled to 0°C. Sodium borohydride (4.6 mg) was added to the reaction mixture, and the obtained mixture was then stirred for 10 minutes. Thereafter, a saturated saline was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to

obtain a corresponding alcohol product. The obtained alcohol product was subjected to the subsequent reaction without further purification.

TFA (1 mL) was added to a dichloromethane solution (1 mL) of the obtained alcohol product, and the obtained mixture was then stirred at a room temperature for 40 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. Dichloromethane (2 mL) and diisopropylethylamine (0.2 mL) were added to the obtained residue, and the obtained mixture was then cooled to 0°C. Acryloyl chloride (7 μ L) was added to the reaction mixture, and the obtained mixture was then stirred for 15 minutes. Thereafter, an ammonia aqueous solution was added to the reaction mixture, and the obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (15 mg, yield: 48%).

Example 15 N-(3-(3-(4-((Dimethylamino)methyl)furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 15)

Dichloroethane (3 mL) and a THF solution (0.53 mL) of 2.0 M dimethylamine were added to the Compound 14(1) (100 mg), and the obtained mixture was then stirred for 10 minutes. Thereafter, acetic acid (0.06 mL) and sodium triacetoxyborohydride (377 mg) were added to the reaction mixture, and the obtained mixture was then stirred for 20 minutes. Thereafter, a saturated aqueous solution of sodium hydrogen carbonate was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure.

The obtained residue was dissolved in THF (1 mL) and methanol (1 mL), and a 2 M aqueous solution of sodium hydroxide (1 mL) was then added to the above obtained solution. The obtained mixture was stirred at a room temperature for 30 minutes. Thereafter, a saturated aqueous solution of ammonium chloride was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to

obtain a corresponding protective group-removed product. The obtained protective group-removed product was subjected to the subsequent reaction without further purification.

Dichloromethane (3 mL) and TFA (1 mL) were added to the obtained protective group-removed product, and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. Acetonitrile (1.5 mL), water (1.5 mL) and diisopropylethylamine (0.15 mL) were added to the obtained residue, and the obtained mixture was then cooled to 0°C. Acryloyl chloride (25 µL) was added to the reaction mixture, and the obtained mixture was then stirred for 30 minutes. Thereafter, an ammonia aqueous solution was added to the reaction mixture, and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (4 mg, yield: 6%).

Example 21

Example 21(1) tert-Butyl (3-(5-carbamoyl-3-(furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)carbamate
(Compound 21(1))

Methanol (1 mL) and a 1 M aqueous solution of sodium hydroxide (1 mL) were added to the Compound 20(2) (92 mg),

and the temperature of the obtained mixture was then increased to 80°C, followed by stirring for 13 hours. Thereafter, the reaction mixture was cooled to 0°C, and 1 M hydrochloric acid was then added to the mixture for dilution. Thereafter, the obtained mixture was extracted with a chloroform solution of 20% ethanol. The gathered organic layer was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure to obtain a corresponding carboxylic acid. The obtained carboxylic acid was subjected to the subsequent reaction without further purification.

DMF (2 mL), ammonium chloride (45.0 mg), diisopropylethylamine (0.183 mL) and HBTU (159 mg) were added to the obtained carboxylic acid, and the temperature of the obtained mixture was then increased to 80°C, followed by stirring for 3 hours. Thereafter, water was added to the reaction mixture for dilution, and the obtained mixture was then extracted with a chloroform solution of 20% ethanol. The gathered organic layer was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a product of interest (77.2 mg, yield: 87%).

DMF (5 mL) was added to the Compound 24(1) (341 mg), and the obtained mixture was then cooled to 0°C. Thereafter, N-iodosuccinimide (247 mg) was added to the reaction mixture, and the obtained mixture was then stirred for 1 hour. Thereafter, a 10% aqueous solution of sodium hydrogen sulfite was added to the reaction mixture at 0°C, and the obtained mixture was then diluted with a saturated aqueous solution of sodium hydrogen carbonate, and was then extracted with ethyl acetate. The gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a corresponding iodine product. The obtained iodine product was subjected to the subsequent reaction without further purification.

TH0092

DMF (5 mL) was added to the obtained iodine product, and the obtained mixture was then cooled to 0°C. Then, 60% sodium hydride (96.0 mg) was added to the reaction mixture. Thus obtained mixture was stirred at a room temperature for 30 minutes, and para-toluenesulfonyl chloride (229 mg) was then added to the reaction mixture at 0°C. The obtained mixture was stirred at a room temperature for 1 hour. Thereafter, a saturated aqueous solution of ammonium chloride was added to the reaction mixture for dilution, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (352 mg, yield: 57%).

Example 28

Example 28(1) N-(3-(3-Iodo-1-tosyl-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 28(1))

Methanol (60 mL) and a 1,4-dioxane solution (10 mL) of 4 M hydrochloric acid were added to the Compound 1(1) (5.91 g), and the obtained mixture was then stirred at a room temperature for 2 hours. Thereafter, the reaction mixture was concentrated under a reduced pressure, and dichloromethane (60 mL) and diisopropylethylamine (8.89 mL) were then added to the concentrate. The obtained mixture was cooled to 0°C. Acryloyl chloride (1.13 mL) was added to the reaction mixture, and the obtained mixture was then stirred at 0°C for 30 minutes. Thereafter, an ammonia aqueous solution, chloroform and methanol were successively added to the reaction mixture, and thus obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, the reaction mixture was extracted with chloroform. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (3.90 g, yield: 72%).

¹H NMR(CDCl₃) δ: 8.34 (d, J=4.9 Hz, 1H), 8.09 (d, J=8.5 Hz, 2H), 7.89 (s, 1H), 7.29 (d, J=8.5 Hz, 2H), 6.94 (d, J=4.9 Hz, 1H), 6.33 - 6.27 (m, 1H), 6.14 - 6.05(m, 1H), 5.85 (br.

d, J=6.1 Hz, 1H), 5.76 - 5.71 (m, 1H), 5.66 - 5.62 (m, 1H), 4.54 - 4.39 (m, 1H), 2.77 - 2.65 (m, 1H), 2.45 - 2.34 (m, 4H), 2.25 - 2.12 (m, 1H), 2.07 - 1.96 (m, J=1.0 Hz, 1H), 1.85 - 1.70 (m, 2H)

Example 28(2) N-(3-(3-(1-Methyl-1H-pyrazol-4-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide
(Compound 28)

1,4-Dioxane (1.2 mL) and water (0.2 mL) were added to the Compound 28(1) (36.7 mg), 1-methyl-4-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)-1H-pyrazole (21.0 mg) and tripotassium phosphate (35.6 mg), followed by nitrogen substitution. Thereafter, PdCl₂(dppf)CH₂Cl₂ (4.9 mg) was added to the reaction mixture, and the obtained mixture was then stirred at 100°C for 1 hour. Thereafter, the reaction mixture was cooled to a room temperature, and ethyl acetate and water were then added to the mixture. Thus obtained mixture was filtered through Celite. The filtrate was extracted with ethyl acetate, and the gathered organic layer was then washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure.

THF (0.5 mL) and a THF solution (0.5 mL) of 1.0 M tetrabutylammonium fluoride were added to the obtained residue, and the obtained mixture was then stirred at a

room temperature for 14 hours. Thereafter, the reaction mixture was concentrated under a reduced pressure, and a 0.067 M phosphate buffer (pH 7.4) was then added to the concentrate. The water layer was extracted with ethyl acetate. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (14.0 mg, yield: 60%).

Example 43 3-(4-(5-Acrylamidecyclohex-1-en-1-yl)-1H-pyrrolo[2,3-b]pyridin-3-yl)pyridine 1-oxide (Compound 43)

DMF (1.5 mL) was added to the Compound 28(1) (100 mg) and 3-(tributylstannyl)pyridine 1-oxide (100 mg), followed

by nitrogen substitution. Thereafter, $\text{PdCl}_2(\text{PPh}_3)$ (12.8 mg) was added to the reaction mixture, and the obtained mixture was then stirred under heating at 100°C for 6 hours. Thereafter, the reaction mixture was cooled to a room temperature, and a saturated aqueous solution of sodium hydrogen carbonate and chloroform were then added to the reaction mixture. Thus obtained mixture was stirred, and was then filtered through Celite. The filtrate was extracted with chloroform, and the gathered organic layer was then washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a corresponding coupling product. The obtained coupling product was subjected to the subsequent reaction without further purification.

THF (0.8 mL) and a THF solution (0.8 mL) of 1.0 M tetrabutylammonium fluoride were added to the obtained coupling product, and the obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, a 0.067 M phosphate buffer (pH 7.4) was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel

TH0092

chromatography (chloroform : methanol) to obtain the title compound (4.3 mg, yield: 7%).

Example 45

Example 45(1) 4-Chloro-3-iodo-1-tosyl-1H-pyrrolo[2,3-b]pyridine-5-carbonitrile (Compound 45(1))

DMF (9 mL) and potassium hydroxide (589 mg) were added to 4-chloro-1H-pyrrolo[2,3-b]pyridine-5-carbonitrile

(533 mg), and the obtained mixture was then stirred at a room temperature for 20 minutes. Thereafter, iodine (1.14 g) was added to the reaction mixture, and the obtained mixture was further stirred at a room temperature for 2 hours. Thereafter, a saturated aqueous solution of sodium hydrogen carbonate was added to the reaction mixture for dilution, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with a 10% aqueous solution of sodium thiosulfate, and then with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration, to obtain a corresponding iodine product. The obtained iodine product was subjected to the subsequent reaction without further purification.

DMF (9 mL) was added to the obtained iodine product, and the obtained mixture was then cooled to 0°C. Thereafter, 60% sodium hydride (144 mg) was added to the reaction mixture. Thus obtained mixture was stirred at a room temperature for 10 minutes, and para-toluenesulfonyl chloride (858 mg) was then added to the reaction mixture at 0°C. The obtained mixture was stirred at a room temperature for 2 hours. Thereafter, a saturated aqueous solution of ammonium chloride was added to the reaction mixture, and the precipitated solid was collected by filtration and was then washed with ethyl acetate and water to obtain a product of interest (767 mg, yield: 56%).

Example 45(2) 4-Chloro-3-(furan-2-yl)-1-tosyl-1H-pyrrolo[2,3-b]pyridine-5-carbonitrile (Compound 45(2))

DMF (10 mL) was added to the Compound 45(1) (458 mg) and tributyl(furan-2-yl)stannane (0.35 mL), followed by nitrogen substitution. Thereafter, $\text{PdCl}_2(\text{PPh}_3)$ (35 mg) was added to the reaction mixture, and the temperature of the obtained mixture was then increased to 100°C , followed by stirring for 15 hours. Thereafter, a saturated aqueous solution of ammonium chloride was added to the reaction mixture for dilution, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with water, with a saturated aqueous solution of sodium hydrogen carbonate and with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (348 mg, yield: 88%).

^1H NMR(CDCl_3) δ : 8.62 (s, 1H), 8.10 (d, $J=8.5$ Hz, 2H), 8.08 (s, 1H), 7.55 (dd, $J=0.7, 1.7$ Hz, 1H), 7.34 (d, $J=8.5$ Hz, 2H), 6.69 (dd, $J=0.7, 3.4$ Hz, 1H), 6.52 (dd, $J=1.7, 3.4$ Hz, 1H), 2.42 (s, 3H)

Example 45(3) N-(3-(5-Cyano-3-(furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide (Compound 45)

1,4-Dioxane (3.0 mL) and water (0.5 mL) were added to the Compound 45(2) (80 mg), the compound of Reference Example 1(2a) (156 mg) and tripotassium phosphate (175 mg), followed by nitrogen substitution. Thereafter, $\text{PdCl}_2(\text{dppf})\text{CH}_2\text{Cl}_2$ (24.0 mg) was added to the reaction mixture, and the obtained mixture was then stirred at 100°C for 1 hour. Thereafter, the reaction mixture was cooled to a room temperature, and ethyl acetate and water were then added to the mixture. Thus obtained mixture was then filtered through Celite. The filtrate was extracted with ethyl acetate, and the gathered organic layer was washed with water and then with a saturated saline. The resultant was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure.

THF (1 mL) and a THF solution (1 mL) of 1.0 M tetrabutylammonium fluoride were added to the obtained residue, and the obtained mixture was then stirred at a room temperature for 1 hour, followed by vacuum concentration. A 0.067 M phosphate buffer (pH 7.4) was added to the residue, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a

corresponding coupling product. The obtained coupling product was subjected to the subsequent reaction without further purification.

Methanol (1 mL) and a 1,4-dioxane solution (1 mL) of 4 M hydrochloric acid were added to the obtained coupling body, and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. Under a nitrogen atmosphere, dichloromethane (3 mL) and diisopropylethylamine (0.3 mL) were added to the reaction mixture, and the obtained mixture was then cooled to 0°C. Thereafter, acryloyl chloride (0.03 mL) was added to the reaction mixture, and the obtained mixture was then stirred for 20 minutes. An ammonia aqueous solution, chloroform and methanol were successively added to the reaction mixture, and thus obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (52.2 mg, yield: 44%).

DMF (10 mL), HATU (1.48 g) and diisopropylethylamine (0.66 mL) were added to the Compound 47(3) (500 mg), and the obtained mixture was then stirred for 10 minutes. Thereafter, ammonia water (0.81 mL) was added to the reaction mixture, and thus obtained mixture was then stirred for 5 minutes. Thereafter, a saturated aqueous

TH0092

solution of sodium hydrogen carbonate was added to the reaction mixture, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was successively washed with water and a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. The obtained residue was purified by silica gel chromatography (methanol : chloroform) to obtain a corresponding carbamoyl product (380 mg, yield: 78%).

N,N-Dimethylformamidedimethylacetal (3 mL) was added to the obtained carbamoyl product, and the obtained mixture was then stirred at 80°C for 40 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. A 1 M aqueous solution of sodium hydroxide (0.28 mL), hydroxyamine hydrochloride (20 mg) and acetic acid (1.8 mL) were added to the obtained residue, and the obtained mixture was then stirred at a room temperature for 20 hours, and was further stirred at 60°C for 4 hours. Subsequently, the reaction mixture was stirred at a room temperature for 15 hours. Thereafter, the reaction mixture was concentrated under a reduced pressure, and the obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (32 mg, yield: 20%).

Example 47(5) N-(3-(3-(1,2,4-Oxadiazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide
(Compound 47)

Dichloromethane (1 mL) and TFA (0.30 mL) were added to the Compound 47(4) (27 mg), and the obtained mixture was then stirred at a room temperature for 20 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. Diisopropylethylamine (25 µL) was added to an ethanol solution (1 mL) of the obtained residue, and the obtained mixture was then cooled to 0°C. Subsequently, acryloyl chloride (5 µL) was added to the reaction mixture, and the obtained mixture was then stirred for 10 minutes. Thereafter, a saturated saline was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain a corresponding acrylamide product. The obtained acrylamide product was subjected to the subsequent reaction without further purification. THF (0.5 mL), methanol (0.5 mL) and a 2 M aqueous solution of sodium hydroxide (0.3 mL) were successively added to the obtained acrylamide product, and the obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, a saturated aqueous solution of ammonium chloride was added to the reaction mixture, and the obtained mixture was then extracted with

chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by preparatory thin-layer chromatography (chloroform : methanol) to obtain the title compound (2 mg, yield: 12%).

Example 49

Example 49(1) 4-(5-((tert-Butoxycarbonyl)amino)cyclohex-1-en-1-yl)-1-((2-(trimethylsilyl)ethoxy)methyl)-1H-pyrrolo[2,3-b]pyridine-3-carboxylic acid (Compound 49(1))

tert-Butanol (30 mL) and 2-methyl-2-butene (5.4 mL) were added to the Compound 48(2) (1.24 g), and an aqueous solution (12 mL) of sodium chlorite (2.88 g) and sodium dihydrogen phosphate (2.23 g) was then added to the above mixture under cooling on ice. Thus obtained mixture was stirred for 1.5 hours. Thereafter, the reaction mixture was concentrated under a reduced pressure, and was then extracted with chloroform. The gathered organic layer was washed with a saturated saline, dried over anhydrous

TH0092

sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a product of interest (1.15 g, yield: 90%).

¹H NMR(DMSO-d₆) δ: 12.18 (s, 1H), 8.31 (s, 1H), 8.28 (d, J=4.8 Hz, 1H), 6.99 (d, J=4.8 Hz, 1H), 6.80 (d, J=7.7 Hz, 1H), 5.67 (s, 2H), 5.54 - 5.50 (m, 1H), 3.87- 3.67 (m, 1H), 3.60 - 3.50 (m, 2H), 2.47 - 2.34 (m, 1H), 2.24 - 2.08 (m, 3H), 1.97 - 1.77 (m, 1H), 1.62 - 1.42 (m, 1H), 1.40 - 1.35 (m, 9H), 0.85 - 0.79 (m, 2H), -0.09 - -0.11 (m, 9H)

Example 49(2) tert-Butyl (3-(3-(hydrazinecarbonyl)-1-((2-(trimethylsilyl)ethoxy)methyl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)carbamate (Compound 49(2))

DMF (6 mL), HATU (975 mg) and diisopropylethylamine (0.15 mL) were added to the Compound 49(1) (300 mg), and the obtained mixture was then stirred for 10 minutes. Thereafter, hydrazine monohydrate (0.18 mL) was added to the reaction mixture, and the obtained mixture was then stirred for 15 minutes. Thereafter, a saturated aqueous solution of sodium hydrogen carbonate was added to the reaction mixture, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was successively washed with water and with a saturated saline, and dried over anhydrous sodium sulfate, followed by vacuum concentration. The obtained residue was purified

by silica gel chromatography (chloroform : methanol) to obtain a product of interest (283 mg, yield: 92%).

^1H NMR(CDCl_3) δ : 8.32 (d, $J=4.8$ Hz, 1H), 7.84 (s, 1H), 7.44 (br. s., 1H), 6.96 (d, $J=4.8$ Hz, 1H), 5.91 (br. s., 1H), 5.69 (s, 2H), 5.65 - 5.56 (m, 1H), 4.51 - 4.20 (m, 2H), 4.09 - 4.00 (m, 1H), 3.60 - 3.54 (m, 2H), 2.80 - 2.52 (m, 1H), 2.43 - 2.23 (m, 2H), 2.20 - 2.09 (m, 1H), 1.89 - 1.79 (m, 2H), 1.46 (s, 9H), 0.97 - 0.88 (m, 2H), -0.05 (s, 9H)

Example 49(4) N-(3-(3-(1,3,4-Oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide
(Compound 49)

THF (5 mL) and a THF solution (3 mL) of 1 M tetrabutylammonium fluoride were added to the Compound 49(3) (240 mg), and the obtained mixture was then stirred at 60°C for 16 hours. Thereafter, a 0.067 M phosphate buffer (pH 7.4) was added to the reaction mixture, and the obtained mixture was then extracted with ethyl acetate. The gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (methanol : chloroform) to obtain a corresponding protective group-removed product. The obtained protective group-removed product was subjected to the subsequent reaction without further purification.

Hexafluoroisopropanol (1.5 mL) was added to the obtained protective group-removed product, and the obtained mixture was then stirred in a microwave at 145°C for 1.5 hours. Thereafter, the reaction mixture was concentrated under a reduced pressure. Diisopropylethylamine (0.11 mL) was added to an ethanol solution (4 mL) of the obtained residue, and the obtained mixture was then cooled to 0°C. Acryloyl chloride (32 μ L)

was added to the reaction mixture, and the obtained mixture was then stirred for 5 minutes. Thereafter, an ammonia aqueous solution was added to the reaction mixture, and the obtained mixture was then stirred at a room temperature for 5 minutes. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (43 mg, yield: 28%).

^1H NMR(DMSO- d_6) δ : 12.64 (br. s., 1H), 9.29 (s, 1H), 8.31 (d, $J=5.1$ Hz, 1H), 8.21 (s, 1H), 8.19 (d, $J=7.7$ Hz, 1H), 7.05 (d, $J=5.1$ Hz, 1H), 6.34 (dd, $J=10.3, 16.9$ Hz, 1H), 6.10 (dd, $J=2.2, 16.9$ Hz, 1H), 5.58 (dd, $J=2.2, 10.3$ Hz, 1H), 5.42 - 5.36 (m, 1H), 4.16 - 4.04 (m, 1H), 2.71 - 2.58 (m, 1H), 2.30 - 2.20 (m, 1H), 2.07 - 1.99 (m, 2H), 1.86 - 1.75 (m, 1H), 1.65 - 1.51 (m, 1H)

Example 55(6) (S)-N-(3-(3-(1,3,4-Oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide
(Compound 55)

TFA (1 mL) was added to the Compound 55(5) (100 mg), and the obtained mixture was then stirred at a room temperature for 30 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. A 2 M aqueous solution of sodium carbonate was added to the obtained residue, and the obtained mixture was then

TH0092

extracted with a mixed solvent of ethanol/chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. Ethanol (0.8 mL), water (0.8 mL) and diisopropylethylamine (54 μ L) were added to the obtained residue, and the obtained mixture was then cooled to 0°C. Acryloyl chloride (14 μ L) was added to the reaction mixture, and the obtained mixture was then stirred for 5 minutes. Thereafter, a saturated saline was added to the reaction mixture, and the obtained mixture was then extracted with chloroform. The extract was dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (38 mg, yield: 70%).

^1H NMR(DMSO- d_6) δ : 12.64 (br. s., 1H), 9.29 (s, 1H), 8.31 (d, $J=5.1$ Hz, 1H), 8.21 (s, 1H), 8.19 (d, $J=7.7$ Hz, 1H), 7.05 (d, $J=5.1$ Hz, 1H), 6.34 (dd, $J=10.3, 16.9$ Hz, 1H), 6.10 (dd, $J=2.2, 16.9$ Hz, 1H), 5.58 (dd, $J=2.2, 10.3$ Hz, 1H), 5.42 - 5.36 (m, 1H), 4.16 - 4.04 (m, 1H), 2.71 - 2.58 (m, 1H), 2.30 - 2.20 (m, 1H), 2.07 - 1.99 (m, 2H), 1.86 - 1.75 (m, 1H), 1.65 - 1.51 (m, 1H)

Example 56 N-(3-(3-(1,3,4-Oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl) chlorohex-2-en-1-yl)acrylamide (Compound 56)

1,4-Dioxane (2.4 mL) and water (0.4 mL) were added to the Compound 55(4) (100 mg), the compound of Reference Example 1(2b) (98 mg), palladium(II) acetate (4.8 mg), 2-dicyclohexylphosphino-2',4',6'-triisopropylbiphenyl (20.6 mg) and disodium carbonate (45.8 mg), and the obtained mixture was then stirred at 130°C for 90 minutes by the use of a microwave reaction apparatus. Thereafter, water was added to the reaction mixture, and the obtained mixture was then extracted with ethyl acetate. The organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (hexane : ethyl acetate) to obtain a coupling product. The obtained coupling product was subjected to the subsequent reaction without further purification.

TFA (1 mL) was added to the obtained coupling product, and the obtained mixture was then stirred at a room temperature for 20 minutes. Thereafter, the reaction mixture was concentrated under a reduced pressure. The obtained residue was purified by basic silica gel chromatography (chloroform : methanol) to obtain an amine product. The obtained amine product was subjected to the subsequent reaction without further purification.

Methylene chloride (2.0 mL) and diisopropylethylamine (0.30 mL) were added to the obtained amine product, and the obtained mixture was then cooled to 0°C. Acryloyl

TH0092

chloride (0.022 mL) was added to the reaction mixture, and the obtained mixture was then stirred for 30 minutes. Thereafter, an ammonia aqueous solution, chloroform and methanol were successively added to the reaction mixture, and the obtained mixture was then stirred at a room temperature for 1 hour. Thereafter, the reaction mixture was extracted with chloroform, and the gathered organic layer was washed with a saturated saline, dried over anhydrous sodium sulfate, and then concentrated under a reduced pressure. The obtained residue was purified by silica gel chromatography (chloroform : methanol) to obtain the title compound (38.1 mg, yield: 66%).

^1H NMR ($\text{CDCl}_3\text{-CD}_3\text{OD}$) δ : 8.52 (s, 1H), 8.32 (d, $J=4.9$ Hz, 1H), 8.04 (s, 1H), 7.03 (d, $J=4.9$ Hz, 1H), 6.41 - 6.27 (m, 2H), 5.72 - 5.61 (m, 2H), 4.76 - 4.65 (m, 1H), 2.32 - 2.22 (m, 2H), 2.04 - 1.82 (m, 3H), 1.80 - 1.67 (m, 1H)

Test Examples

The compound according to the present invention was evaluated by the following test methods:

[0281]

Test Example 1 Test regarding action to inhibit various JAK kinase activities (in vitro)

1) Measurement of JAK1 kinase-inhibitory activity

The activity of the compound of the present invention to inhibit the activity of JAK1 kinase was measured.

Among materials for the measurement of this inhibitory activity, a substrate peptide and a kinase protein were acquired as follows. As such a substrate peptide, a substrate peptide for QSS Assist™ JAK1-MSA assay kit (Carna Biosciences, Inc.) was purchased. As such a kinase protein, a purified recombinant human JAK1 protein (Carna Biosciences, Inc.) was purchased.

The method for measuring the inhibitory activity is as follows. First, the compounds of the present invention

were each dissolved in dimethyl sulfoxide (DMSO), and a serial dilution was then prepared by the use of DMSO. Subsequently, a serial dilution solution of the compound (the final concentration of DMSO upon a kinase reaction: 5.0%) or DMSO (final concentration: 5.0%) was mixed with a solution containing the substrate peptide (final concentration: 1 μ M), magnesium chloride (final concentration: 5 mM) and ATP (final concentration: 75 μ M) in a buffer for kinase reaction (20 mM HEPES (pH 7.5), 2 mM dithiothreitol and 0.01% Triton X-100). Thereafter, a JAK1 protein was further added to the mixed solution, and the obtained mixture was then incubated at 25°C for 120 minutes to carry out a kinase reaction. To the reaction solution, EDTA was added to a final concentration of 30 mM, so as to terminate the reaction. Finally, with LabChip EZ Reader II (Perkin Elmer Corp.), an unphosphorylated substrate peptide (S) and a phosphorylated peptide (P) were subjected to microchannel capillary electrophoresis, so that the two peptides were separated from each other and were then detected. The amount of a phosphorylation reaction was obtained based on the heights of the peaks of S and P, and the concentration of the compound capable of inhibiting 50% of the phosphorylation reaction was defined as an IC₅₀ value (nM). The obtained data are shown in a table below.

[0282]

2) Measurement of JAK2 kinase-inhibitory activity

The activity of the compound of the present invention to inhibit the activity of JAK2 kinase was measured.

Among materials for the measurement of this inhibitory activity, a substrate peptide and a kinase protein were acquired as follows. As such a substrate peptide, FL-Peptide 22 (Perkin Elmer Corp.) was purchased. As such a kinase protein, a purified recombinant human JAK2 protein (Carna Biosciences, Inc.) was purchased.

The method for measuring the inhibitory activity is as follows. First, a serial dilution of the compound of the present invention was prepared by the same method as that described in the above section regarding JAK1. This serial dilution solution (the final concentration of DMSO upon a kinase reaction: 5.0%) or DMSO (final concentration: 5.0%) was mixed with a solution containing the substrate peptide (final concentration: 1 μ M), magnesium chloride (final concentration: 10 mM) and ATP (final concentration: 10 μ M) in a buffer for kinase reaction (15 mM Tris (pH 7.5), 2 mM dithiothreitol and 0.01% Tween 20). Thereafter, a JAK2 protein was further added to the mixed solution, and the obtained mixture was then incubated at 25°C for 80 minutes to carry out a kinase reaction. To the reaction solution, EDTA was added to a final concentration of 30 mM, so as to terminate the reaction. After termination of the reaction, the measurement and the data analysis were carried out by the

same methods as those described in the above section regarding JAK1.

[0283]

3) Measurement of JAK3 kinase-inhibitory activity

The activity of the compound of the present invention to inhibit the activity of JAK3 kinase was measured.

Among materials for the measurement of this inhibitory activity, a substrate peptide and a kinase protein were acquired as follows. As such a substrate peptide, a substrate peptide for QSS AssistTM JAK3-MSA assay kit (Carna Biosciences, Inc.) was purchased. As such a kinase protein, a purified recombinant human JAK3 protein (Carna Biosciences, Inc.) was purchased.

The method for measuring the inhibitory activity is as follows. First, a serial dilution of the compound of the present invention was prepared by the same method as that described in the above section regarding JAK1. This serial dilution solution (the final concentration of DMSO upon a kinase reaction: 5.0%) or DMSO (final concentration: 5.0%) was mixed with a solution containing the substrate peptide (final concentration: 1 μ M), magnesium chloride (final concentration: 5 mM) and ATP (final concentration: 5 μ M) in a buffer for kinase reaction (20 mM HEPES (pH 7.5), 2 mM dithiothreitol and 0.01% Triton X-100). Thereafter, a JAK3 protein was further added to the mixed solution, and the obtained mixture was then incubated at 25°C for 80 minutes to carry

out a kinase reaction. To the reaction solution, EDTA was added to a final concentration of 30 mM, so as to terminate the reaction. After termination of the reaction, the measurement and the data analysis were carried out by the same methods as those described in the above section regarding JAK1.

As a result, it was found that, as shown in Table 8 below, the compound of the present invention or a salt thereof had a stronger JAK3-inhibitory activity than that of each of the compounds described in Patent Literatures 1 and 2, and had extremely high selectivity to JAK3.

[0285]

Test Example 2 Test regarding growth of human
peripheral blood mononuclear cells (PBMC)

The activity of the compound of the present invention to inhibit the IL-2-dependent growth reaction of human PBMC, which is caused by JAK3, was measured (Arthritis Rheum. 2010; 62(8): 2283-93).

With a medium containing 10 µg/mL PHA-M (Sigma) (which is RPMI-1640 (Sigma) containing 10% human serum type AB (MP Biomedicals)), human PBMC (C.T.L.) (cell density: 1×10^6 cells/mL) was cultured at 37°C in a culture vessel containing 5% carbon dioxide for 3 days. Thereafter, the culture was washed with RPMI-1640 four times, and a medium (RPMI-1640 containing 10% human serum type AB) was then added to the resultant culture to prepare a cell suspension. The cells (1×10^4 cells per well) and the serially diluted compound of the present invention were added to each well of a 96-well U-bottom microplate, and thus obtained mixture was then cultured at 37°C in a culture vessel containing 5% carbon dioxide for 30 minutes. After completion of the culture, recombinant human IL-2 (Peprotech) was added to the culture to a final concentration of 2 ng/mL, and the obtained mixture was then stirred at 37°C in a culture vessel containing 5% carbon dioxide for 2 days (1×10^4 cells/100 µl/each well). After completion of the culture, the resultant was left at a room temperature for 30 minutes, and 100 µl of

TH0092

CellTiter-Glo Luminescent Cell Viability Assay (Promega) was then added to the resultant, followed by stirring it. Thereafter, the reaction mixture was left for 10 minutes, and the amount of a luminescence derived from living cells in each well was then measured with a microplate reader (TECAN). The inhibition rate of the compound to the cell growth caused by IL-2 stimulation was calculated, and the concentration of the compound capable of inhibiting 50% of the cell growth was defined as an IC₅₀ value (nM). The obtained data are shown in a table below.

[0286]

As a result, it was found that the compound of the present invention or a salt thereof has a stronger PBMC growth-inhibitory effect than that of each of the compounds described in Patent Literatures 1 to 3.

[0288]

Test Example 3 Therapeutic effect on rheumatoid arthritis

Collagen-induced arthritis, which is a mouse experimental model for rheumatoid arthritis, was used. The clinical symptoms of arthritis were scored, the obtained scores were used as indicators, and the action of the compound of the present invention by oral administration was confirmed. Six-week-old male DBA/1 mice (Charles River Laboratories Japan, Inc.) were administered with a 100 μ L/body solution (emulsion), which had been obtained by

mixing a 4 mg/ mL bovine type 2 collagen solution (Collagen Research Center) with a Freund's complete adjuvant (DIFCO) in equal amounts, via dorsal intradermal injection (initial immunization). Twenty-one days after the initial immunization, the mice were administered with a 100 μ L/body solution (emulsion), which had been obtained by mixing a 4 mg/ mL bovine type 2 collagen solution (Collagen Research Center) with a Freund's incomplete adjuvant (DIFCO) in equal amounts, via intradermal injection to the tail base thereof (booster), so as to induce an arthritis reaction (Arthritis Rheum 2010; 62 (8): 2283-93). Seven days after the implementation day of the booster (which is defined as Day 0), the compound of the present invention was continuously administered to the mice for 13 days via oral administration of twice a day. On Day 7, Day 9, Day 12, Day 15 and Day19, the clinical symptoms of arthritis were scored by observation with naked eyes, and the action of the compound of the present invention was then confirmed. The clinical symptoms for each limb were scored (0: not changed, 1: one finger swelled, 2: two or more fingers swelled, 3: instep swelled, 4: all fingers swelled and also wrist or ankle swelled), and a total score from the four limbs was defined as a score for an individual mouse (the highest score: 16).

As a result, it was found that the compound of the present invention showed an excellent therapeutic effect on rheumatoid arthritis.

[0289]

Test Example 4 Therapeutic effect on multiple
sclerosis

Experimental autoimmune encephalomyelitis, which is a mouse experimental model for multiple sclerosis, was used. Eight-week-old male SJL/J mice (Charles River Laboratories Japan, Inc.) were administered with a mixed solution (emulsion), which had been obtained by mixing a normal saline aqueous solution (1 mg/ mL) of a peptide (Toray Research Center, Inc.) corresponding to 139-151 residues of a proteolipid protein with a Freund's complete adjuvant (DIFCO) containing 4 mg/ mL killed *Mycobacterium tuberculosis* (H37Ra) in equal amounts, via intradermal injection in an amount of 100 μ L each into two sites of the dorsal portion of each mouse, so as to induce encephalomyelitis. Seven days after the implementation day of the immunization (which is defined as Day 0), the compound of the present invention was continuously administered to the mice for 4 weeks via oral administration of twice a day. On Day 0, Day 2, Day 5, and Days 7 to 35, the clinical symptoms of encephalomyelitis were observed with naked eyes, and the action of the compound of the present invention was then confirmed. The observed clinical symptoms were scored (0: no symptoms, 1: weakened tail, 1.5: complete ptosis of tail, 2: ataxia, 3: light paralysis of hindlimbs, 3.5: light paralysis of

hindlimbs, 4. complete paralysis of hindlimbs, 4.5: paralysis of four limbs, dying, 5: death).

As a result, it was found that the compound of the present invention showed an excellent therapeutic effect on multiple sclerosis.

[0290]

Test Example 5 Evaluation of oral absorbability

The compound of the present invention was suspended or dissolved in 0.5% HPMC, and the obtained suspension or solution was administered to BALB/cA mice via oral administration. 0.5, 1, 2, 4 and 6 hours after completion of the oral administration, blood was collected from the eye ground of each mouse, to obtain plasma. The concentration of the compound in the obtained plasma was measured by LCMS, and oral absorbability was then evaluated.

As a result, it was found that, after completion of the oral administration, the compound of the present invention was present in a sufficient concentration in the plasma, and that the compound exhibited good oral absorbability.

Claims

[Claim 1]

A compound of the following formula (I), or a salt thereof:

wherein

R_1 represents an optionally substituted C_4 - C_{10} cycloalkyl group, an optionally substituted C_4 - C_{10} cycloalkenyl group, an optionally substituted C_4 - C_{10} cycloalkynyl group, an optionally substituted C_6 - C_{14} aromatic hydrocarbon group, or an optionally substituted 4- to 10-membered saturated or unsaturated heterocyclic group;

R_2 represents a hydrogen atom, a halogen atom, a hydroxy group, a cyano group, a nitro group, $-C(=O)R_x$, $-C(=O)OR_x$, $-C(=O)N(R_x)(R_y)$, $-N(R_x)(R_y)$, $-NR_xC(=O)R_y$, $-NR_xS(=O)_2R_y$, $-NR_xC(=O)OR_y$, $-NR_xC(=O)N(R_y)(R_z)$, $-NR_xS(=O)_2N(R_y)(R_z)$, $-OC(=O)R_x$, $-OC(=O)OR_x$, $-OC(=O)N(R_x)(R_y)$, $-SR_x$, $-S(=O)_2R_x$, $-S(=O)_2OR_x$, an optionally R_b -substituted C_1 - C_6 alkyl group, an optionally R_b -substituted C_2 - C_6 alkenyl

group, an optionally R_b -substituted C_2-C_6 alkynyl group, an optionally R_b -substituted C_1-C_6 alkoxy group, an optionally R_c -substituted C_3-C_{10} cycloalkyl group, an optionally R_c -substituted C_6-C_{14} aromatic hydrocarbon group, or an optionally R_c -substituted 4- to 10-membered saturated or unsaturated heterocyclic group;

R_3 represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1-C_6 alkyl group, a C_2-C_6 alkenyl group, a C_2-C_6 alkynyl group, or a C_1-C_6 alkoxy group;

R_4 represents an optionally R_b -substituted C_2-C_6 alkenyl group or an optionally R_b -substituted C_2-C_6 alkynyl group;

R_4 represents an optionally R_b -substituted C_2-C_6 alkenyl group or an optionally R_b -substituted C_2-C_6 alkynyl group;

R_b represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, a C_1-C_6 alkoxy group, a di- or mono- $(C_1-C_6$ alkyl)amino group, or a 4- to 10-membered saturated or unsaturated heterocyclic group;

R_c represents a halogen atom, an amino group, a hydroxy group, a cyano group, a nitro group, an oxo group, an imino group, an N-oxide group, a C_1-C_6 alkyl group, a C_2-C_6 alkenyl group, a C_2-C_6 alkynyl group, a C_1-C_6 alkoxy group, or a di- or mono- $(C_1-C_6$ alkyl)amino group;

R_x , R_y and R_z , which are the same or different, each represent a hydrogen atom, a C_1-C_6 alkyl group, a C_1-C_6

haloalkyl group, a C₂-C₆ alkenyl group, a C₂-C₆ alkynyl group, a C₃-C₁₀ cycloalkyl group, a C₆-C₁₄ aromatic hydrocarbon group, or a 4- to 10-membered saturated or unsaturated heterocyclic group;

m represents an integer of 0 to 3; and

n represents an integer of 0 to 2.

[Claim 2]

The compound or a salt thereof according to claim 1, wherein a group with which the C₄-C₁₀ cycloalkyl group, C₄-C₁₀ cycloalkenyl group, C₄-C₁₀ cycloalkynyl group, C₆-C₁₄ aromatic hydrocarbon group or 4- to 10-membered saturated or unsaturated heterocyclic group, which is represented by R₁, is optionally substituted is R_a, and the R_a represents a halogen atom, a hydroxy group, a cyano group, a nitro group, an oxo group, an N-oxide group, -C(=O)R_x, -C(=O)OR_x, -C(=O)N(R_x)(R_y), -C(=O)SR_x, -C(=S)OR_x, -C(=O)ON(R_x)(R_y), -N(R_x)(R_y), -NR_xC(=O)R_y, -NR_xS(=O)₂R_y, -NR_xC(=O)OR_y, -NR_xC(=O)N(R_y)(R_z), -NR_xS(=O)₂N(R_y)(R_z), -N(R_x)-OR_y, =NR_x, =N-OR_x, -OC(=O)R_x, -OC(=S)R_x, -OC(=O)OR_x, -OC(=O)N(R_x)(R_y), -OC(=S)OR_x, -SR_x, -S(=O)₂R_x, -S(=O)₂OR_x, -S(=O)₂N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₂-C₆ alkenyl group, an optionally R_b-substituted C₂-C₆ alkynyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, an optionally R_c-substituted C₃-C₁₀ cycloalkyl group, an optionally R_c-substituted C₆-C₁₄ aromatic hydrocarbon group, or an

optionally R_c-substituted 4- to 10-membered saturated or unsaturated heterocyclic group.

[Claim 3]

The compound or a salt thereof according to claim 1 or 2, wherein R₁ represents an optionally R_a-substituted C₅-C₇ cycloalkenyl group, an optionally R_a-substituted C₆-C₁₀ aromatic hydrocarbon group, or an optionally R_a-substituted monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O.

[Claim 4]

The compound or a salt thereof according to any one of claims 1 to 3, wherein R₁ represents an optionally R_a-substituted cyclopentenyl group, cyclohexenyl group, phenyl group, furanyl group, 1H-pyrazolyl group, thiazolyl group, oxazolyl group, isoxazolyl group, 1,3,4-thiadiazolyl group, 1,2,4-oxadiazolyl group, 1,3,4-oxadiazolyl group, pyridyl group, dihydropyranyl group, dihydrofuranyl group, or 4,5-dihydro-1,3,4-oxadiazolyl group.

[Claim 5]

The compound or a salt thereof according to any one of claims 1 to 4, wherein R₁ represents a cyclopentenyl group, a cyclohexenyl group, a phenyl group, a furanyl group, a 1H-pyrazolyl group, a thiazolyl group, an oxazolyl group, an isoxazolyl group, a 1,3,4-thiadiazolyl group, a 1,2,4-oxadiazolyl group, a 1,3,4-oxadiazolyl

group, a pyridyl group, a dihydropyranyl group, a dihydrofuranyl group, or a 4,5-dihydro-1,3,4-oxadiazolyl group, which is optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an oxo group, an N-oxide group, a formyl group, a C₁-C₆ alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group), a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom), and a 4- to 10-membered saturated heterocyclic group.

[Claim 6]

The compound or a salt thereof according to any one of claims 1 to 5, wherein R₁ represents a cyclopentenyl group; a cyclohexenyl group; a phenyl group; a furanyl group, which is optionally substituted with a group selected from the group consisting of a formyl group and a C₁-C₆ alkyl group (which is optionally substituted with a group selected from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group); a 1H-pyrazolyl group, which is optionally substituted with a group selected from the group consisting of a C₁-C₆ alkyl group and a 4- to 10-membered saturated heterocyclic group; a thiazolyl group; an oxazolyl group; an isoxazolyl group; a 1,3,4-thiadiazolyl group; a 1,2,4-oxadiazolyl group; a 1,3,4-oxadiazolyl group, which is optionally substituted with a C₁-C₆ alkyl group; a pyridyl group,

which is optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an N-oxide group, a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group), and a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom); a dihydropyranyl group; a dihydrofuranyl group; or a 4,5-dihydro-1,3,4-oxadiazolyl group, which is optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group.

[Claim 7]

The compound or a salt thereof according to any one of claims 1 to 6, wherein R₂ represents a hydrogen atom, a cyano group, -C(=O)OR_x, -C(=O)N(R_x)(R_y), an optionally R_b-substituted C₁-C₆ alkyl group, an optionally R_b-substituted C₁-C₆ alkoxy group, or an optionally R_c-substituted monocyclic 4- to 7-membered unsaturated heterocyclic group having 1 to 3 heteroatoms selected from the group consisting of N, S and O.

[Claim 8]

The compound or a salt thereof according to any one of claims 1 to 7, wherein R₂ represents a hydrogen atom; a cyano group; a (C₁-C₆ alkoxy)carbonyl group; a carbamoyl group; a di- or mono-(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group, which is optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-

TH0092

C₆ alkoxy group; or a monocyclic 5- or 6-membered completely unsaturated heterocyclic group having 1 to 3 N atoms, which is optionally substituted with a C₁-C₆ alkyl group.

[Claim 9]

The compound or a salt thereof according to any one of claims 1 to 8, wherein m represents 0, n represents 0 or 1, R₄ represents a C₂-C₆ alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

[Claim 10]

The compound according to any one of claims 1 to 9, or a salt thereof, wherein

R₁ represents a cyclopentenyl group; a cyclohexenyl group; a phenyl group; a furanyl group, which is optionally substituted with a group selected from the group consisting of a formyl group and a C₁-C₆ alkyl group (which is optionally substituted with a group selected

from the group consisting of a hydroxy group and a di- or mono-(C₁-C₆ alkyl)amino group); a 1H-pyrazolyl group, which is optionally substituted with a group selected from the group consisting of a C₁-C₆ alkyl group and a 4- to 10-membered saturated heterocyclic group; a thiazolyl group; an oxazolyl group; an isoxazolyl group; a 1,3,4-thiadiazolyl group; a 1,2,4-oxadiazolyl group; a 1,3,4-oxadiazolyl group, which is optionally substituted with a C₁-C₆ alkyl group; a pyridyl group, which is optionally substituted with a group selected from the group consisting of a halogen atom, an amino group, a hydroxy group, an N-oxide group, a C₁-C₆ alkyl group (which is optionally substituted with a hydroxy group), and a C₁-C₆ alkoxy group (which is optionally substituted with a halogen atom); a dihydropyranyl group; a dihydrofuranyl group; or a 4,5-dihydro-1,3,4-oxadiazolyl group, which is optionally substituted with a group selected from the group consisting of an oxo group and a C₁-C₆ alkyl group,

R₂ represents a hydrogen atom; a cyano group; a (C₁-C₆ alkoxy)carbonyl group; a carbamoyl group; a di- or mono-(C₁-C₆ alkyl)carbamoyl group; a C₁-C₆ alkyl group, which is optionally substituted with a group selected from the group consisting of a hydroxy group, a C₁-C₆ alkoxy group, a di- or mono-(C₁-C₆ alkyl)amino group, and a 4- to 10-membered saturated heterocyclic group; a C₁-C₆ alkoxy group; or a monocyclic 5- or 6-membered completely

unsaturated heterocyclic group having 1 to 3 N atoms,
which is optionally substituted with a C₁-C₆ alkyl group,

m represents 0, n represents 0 or 1, R₄ represents a
C₂-C₆ alkenyl group, and

in the formula (I), the following structure:

is any one of the following structures:

[Claim 11]

The compound or a salt thereof according to any one
of claims 1 to 10, wherein the compound is any of
compounds represented by the following (1) to (11):

- (1) N-(3-(3-phenyl-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (2) N-(3-(3-(1H-pyrazol-4-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (3) N-(3-(3-(2-methoxypyridin-3-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (4) N-(3-(3-(furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,

TH0092

- (5) N-(3-(3-(4-(hydroxymethyl)furan-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (6) N-(3-(3-(2,5-dihydrofuran-3-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (7) N-(3-(3-(oxazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (8) N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (9) (S)-N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide,
- (10) N-(3-(3-(1,3,4-oxadiazol-2-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclopent-3-en-1-yl)acrylamide, and
- (11) (S)-N-(3-(3-(isoxazol-5-yl)-1H-pyrrolo[2,3-b]pyridin-4-yl)cyclohex-3-en-1-yl)acrylamide.

[Claim 12]

A JAK3 inhibitor comprising, as an active ingredient, the compound or a salt thereof according to any one of claims 1 to 11.

[Claim 13]

A pharmaceutical composition comprising the compound or a salt thereof according to any one of claims 1 to 11.

[Claim 14]

The pharmaceutical composition according to claim 13, wherein the pharmaceutical composition is a pharmaceutical composition for treating a disease involving JAK3.

[Claim 15]

An agent for preventing and/or treating rheumatoid arthritis or multiple sclerosis, comprising, as an active ingredient, the compound or a salt thereof according to any one of claims 1 to 11.

[Claim 16]

The compound or a salt thereof according to any one of claims 1 to 11, for treating a disease involving JAK3.

[Claim 17]

The compound or a salt thereof according to any one of claims 1 to 11, for preventing and/or treating rheumatoid arthritis or multiple sclerosis.

[Claim 18]

Use of the compound or a salt thereof according to any one of claims 1 to 11 for producing a medicament for treating a disease involving JAK3.

[Claim 19]

Use of the compound or a salt thereof according to any one of claims 1 to 11 for the producing a medicament for preventing and/or treating rheumatoid arthritis or multiple sclerosis.

[Claim 20]

A method for preventing and/or treating a disease involving JAK3, comprising administering the compound or a salt thereof according to any one of claims 1 to 11.

[Claim 21]

A method for preventing and/or treating rheumatoid arthritis or multiple sclerosis, comprising administering

TH0092

the compound or a salt thereof according to any one of claims 1 to 11.
