INFORMATION PROCESSING DEVICE, INFORMATION PROCESSING METHOD, AND INFORMATION PROCESSING PROGRAM

ABSTRACT

This information processing device comprises: a central element acquisition unit that acquires a central element which is central to a thought; a central element display instruction unit that instructs a user terminal to display the central element; a peripheral element acquisition unit that acquires a first peripheral element related to the central element; a peripheral element display instruction unit that instructs the user terminal to display the first peripheral element around the central element; a link acquisition unit that acquires a first link between the central element and the first peripheral element; and a link display instruction unit that instructs the user terminal to display the first link between the central element and the first peripheral element.
