

ABSTRACT

According to embodiments of the disclosure, a method, an apparatus, a device and a storage medium for generating live streaming video are provided. The method includes: obtaining a first live streaming video segment from live streaming content of a live streaming room in accordance with that a live streaming explanation state of a first object corresponding to the live streaming room is detected to be an explaining state, the first live streaming video segment comprising content related to the first object in the live streaming content; and generating a first media content in accordance with that the first live streaming video segment satisfies a recommendation condition, the first media content comprising at least the first live streaming video segment. Therefore, the live streaming video segment corresponding to an explanation object may be automatically generated in a live streaming process.
