

## **A Method And System for Delivering A Floatation Device**

### **ABSTRACT**

5           A method and system for delivering a deployable floatation device, the  
method comprising: providing a launcher having a recoil absorbing base and a  
launch tube coupled to the base; providing a projectile for launching by the launcher,  
the projectile comprising the deployable floatation device; adjusting an orientation of  
the launch tube relative to the base for launching the projectile to a first targeted  
10 point; launching the projectile to the first targeted point; and remotely controlling a  
movement of the deployed floatation device to a second targeted point after the  
projectile has landed on or about the first targeted point.
