(54) **Title: PDU SET IDENTIFICATION**

Figure 13

(57) **Abstract:** Various aspects of the present disclosure relate to a network node for wireless communication, comprising: at least one memory; and at least one processor coupled with the at least one memory and configured to cause the network node to: receive a packet detection rule, PDR, including an indication to establish an encapsulation protocol with a server address when the network node detects that a packet is sent towards the server address, and configuration information to enable PDU set inspection and extract PDU set information from information contained within the encapsulation protocol when the network node receives a packet from the server address. The processor is further configured to receive a first uplink packet, inspect the first uplink packet and identify the first uplink packet as matching the PDR.
