(54) Title: METHOD AND DEVICE FOR ENABLING ACCESS TO WIRELESS COMMUNICATION NETWORK

200

Obtaining an access assisting signal in an access assisting signal set,
the access assisting signal set comprises a plurality of access
assisting signals that enable a user equipment to initially access to
the cell-free wireless communication network

210

Broadcasting the access assisting signal, the plurality of access
points broadcast respective access assisting signals at a same time

220

FIG. 2

(57) Abstract: This disclosure relates to methods and devices for enabling access to a cell-free wireless communication network. The cell-free wireless communication network may include a plurality of access points and at least one central processing unit controlling the access points. In one implementation, the method may include obtaining an access assisting signal in an access assisting signal set. The access assisting signal set may include a plurality of access assisting signals that enable a user equipment to initially access to the cell-free wireless communication network. The method may include broadcasting the access assisting signal. The plurality of access points broadcast respective access assisting signals at a same time.
