GAME MANAGEMENT SYSTEM

ABSTRACT

A game management system manages a casino game performed in a plurality of tables in casino facilities. The game management system includes: a camera obtaining an image by capturing bet gaming tokens; a control device specifying a betting amount on the basis of the type and the number of gaming tokens in the image by specifying a betting target on the basis of a position of the gaming token in the image; a card distribution device determining a game result of the casino game; an arithmetic device calculating a profit of a casino manager for each table and each game of the plurality of tables, on the basis of the betting target, the betting amount, and the game result; and a recording apparatus recording the profit.
