

LIGHT FIXTURE

Described and illustrated is a light fixture (10), especially for fixing to a building or building surface (11), comprising a trough-shaped reflector (16) comprising an inside face with at least two side walls (18), in which a first side wall (18) is located opposite a second side wall (19) and with a light outlet (23) in which is provided a diffuser element (24).

The novelty consists in that at least the first side wall (18) and the second side wall (19) located opposite the side wall have at least a section (18 and 19) aligned along a plane on which several LED's (27a, 27b, 27c, 27d, 27e, 27f, 27g) are provided, in that the light fixture has LED's of varying colors, and in which the LED's are mounted in such a way that the predominant portion of the light emitted by the LED (27a) that is provided on one side wall (18), reaches the diffuser element (24) only after reflection off another side wall (19).
