

ABSTRACT

5 Disclosed in embodiments of the present application are a paging failure
processing method, an access network device, and a core network device. The method
comprises: in a case in which downlink data of a terminal device needs to be transmitted,
an access network device determines that a paging initiated by the access network to
the terminal device failed; and the access network device transmits first indication
10 information to a core network device, the first indication information being used for
indicating that the paging initiated by the access network device to the terminal device
failed. By means of the method, the access network device and the core network device
in the embodiments of the present application, the data transmission reliability can be
improved.
