ABSTRACT

HEAT-DISSIPATING CAR CALIPER COVER

An embodiment of the present application provides a heat-dissipating car caliper cover, the car caliper cover comprising a cover body and a fixing member for fixing the cover body to a car caliper, wherein a first arc-shaped side plate is provided on an outer side of the cover body, a second arc-shaped side plate is provided on an inner side of the cover body, the fixing member is provided on the first arc-shaped side plate, a heat transmission assembly is provided on the first arc-shaped side plate, and the heat transmission assembly comprises an elastic pressing sheet and a silicone sheet provided on the elastic pressing sheet; and when the cover body is fixed to the car caliper, the elastic pressing sheet can contact the silicone sheet with a pump body outer side wall of the car caliper, and conducts heat to the cover body for heat dissipation. By providing the heat transmission assembly on the first arc-shaped side plate, the heat-dissipating car caliper cover of the embodiment of the present application can quickly dissipate the heat generated by a piston pump body of the caliper through the elastic pressing sheet and the silicone sheet.
