

Coating process for ophthalmic lenses

Abstract

The present invention generally relates to a method for coating ophthalmic lenses, preferably contact lenses, more preferably silicone hydrogel contact lenses. In particular, the present invention is directed to a method for forming a coating comprising a polyionic material on a contact lens, preferably a silicone hydrogel contact lens, directly in the primary package and maintaining the coated contact lens within said primary package until insertion of the coated contact lens in the eye of the contact lens user. Before sealing the primary package, a tablet for adjusting the pH in the primary package is added.
