(54) Title: CONTAINER FOR INTRAVENOUS ADMINISTRATION

(57) Abstract

A device for storing and administering a medical fluid comprising a sealed flexible formed container (10) with an opening part (12) in its front end in which an insert (20) is positioned. Over the insert, the container extends into a removable sealing cap (14). After removal of the sealing cap an injection means is attached to the insert and fluid administration through the insert is admitted in one direction by squeezing the container.
