(54) Title: MOVEABLE ELEMENT KEY AND KEY HANDLE AND LOCK

(57) Abstract

A key is provided with an actuator. The key also has an operation means and an interaction means. When the key is inserted into a lock, a force is applied to the operation means and the position of the interaction means is altered. The movement of the interaction means is used in the locking and/or un-locking mechanism of the lock. A key handle and lock are also provided which incorporate such a mechanism.
