client claims that reasonable points are not offered for a bet amount, it cannot be verified and thus a casino manager has to offer points in response to the client's claim. There may be a client with malice who makes such a claim and thus the loss of the casino manager may be severely large.

[0007]

Therefore, embodiments of the present disclosure seek to provide a game management system that can reliably offer points corresponding to a bet amount of each player.

[0008]

According to an aspect of the present disclosure, there is provided a game management system for management of a casino game played in a casino facility, the game management system comprising: a gaming table that includes a plurality of player positions (1)-(7) and a betting target; and at least one processing device configured to, for respective ones of one or more players that are each at a respective one of the plurality of player positions: identify respective positions, types, and numbers of respective game tokens that have been placed in the betting target as a respective bet for playing a game for the respective player by analyzing an image of the game tokens captured by a camera; calculate a respective bet amount of the respective bet by the respective player based on the identified respective positions, types, and numbers of the game tokens; recognize the respective player that is participating in the game based on a video or three-dimensional image of the respective player; identify a respective member ID of the respective player; store,

in a database in association with each other, (a) the respective member ID of the respective player and (b) a respective one of the identified bet amounts by using a result of the recognition of the respective player; and assign a respective number of points to the respective player based on the one of the identified bet amounts that is associated with the respective player.

[0008a]

There is also disclosed a game management system that manages a casino game which is played in a casino facility, the game management system including: a gaming table in which a game is played using game tokens; an information processing device that identifies a bet amount for each player position of the gaming table on the basis of a position, a type, and the number of game tokens which have been bet; a player identifying unit that identifies a player who participates in a game at each player position of the gaming table; and a point processing unit that stores a member ID of each player who is identified by the player identifying unit and a bet amount of each player position which is identified by the information processing device in a database in correlation with each other, in which the point processing unit has a function of giving points based

The game management system may further include an incentive processing unit that provides an incentive on the basis of a bet amount which is accumulated every successive days.

[0025]

With this configuration, it is possible to offer an incentive on the basis of the points accumulated every successive days (for example, three days).

[0026]

According to another aspect of the present disclosure, there is provided a game management system comprising: a camera configured to capture an image of game tokens bet in the game by one or more players participating in a game at a respective player position of a game table in a casino facility, and a three-dimensional image or video of a player at the respective player position; and at least one processing device that is configured to: identify the one or more players; recognize at least one player of the one or more players that is participating in the game based on the video or three-dimensional image of the at least one player; and for respective ones of the one or more players at the respective player positions: identify based on performance of an image analysis on the image, respective positions and types of the game tokens that have been placed as a bet by the respective player; and calculate a respective bet amount of the respective bet of the respective player based on the identified positions and types of the game tokens and record respective points of the respective player according to the respective identified bet amount.

[0026a]

There is also disclosed a game management system including a player identifying unit that identifies a player who participates in a game in a casino facility; a camera that acquires an image by photographing game tokens which each player has bet in the game; an information processing device that identifies a bet amount of each player in the game on the basis of the image; and a recording unit that records points of each player according to the bet amount identified by the information processing device.

[0027]

With this configuration, it is also possible to reliably offer points based on a bet amount of each player.

[0028]

In the game management system, the recording unit may be a storage medium which is carried by each player.

[0029]

With this configuration, a player can request an
